**OUR BLOG ARTICLES FOR THIS SPECIAL ISSUE NEXT LEVEL ASSET TOKENIZATION: HOW GENIUX TOKEN LEVERAGES BLOCKCHAIN TO ALLOW PRIVATE INVESTORS TO TAP INTO THE REAL ESTATE MARKETS**

**DIRTY FINANCE - A DIRTY DEAL ON HENTAI NFTS FROM CRYPTO PROJECT**

**ALL YOU NEED TO KNOW ABOUT BEATBIND'S BBND TOKENS - THE HOTTEST BET IN THE MUSIC INDUSTRY RIGHT NOW**

Traders dumped assets perceived as risky on fears that a default in Chinese developer Evergrande could roil financial markets across the world. Both European and US stock markets witnessed sharp losses on Monday and crypto markets also sold off, though most coins are attempting to start a recovery today.

The moving averages have completed a bearish crossover and the relative strength index (RSI) has dropped into the negative territory, indicating that sellers are in command. The long tail on today's candlestick shows that bulls are attempting to defend the critical support at £31,011.

However, any relief rally to the 20-day exponential moving average (EMA) and the downtrend line is likely to attract selling. If the price turns down from this overhead resistance zone, the bears will try to resume the down move. If the BTC/GBP pair plummets and closes below £31,011, the next stop could be £26,845. Such a deep fall could delay the start of the next leg of the uptrend.

The first sign of strength will be a break and close above the downtrend line. If that happens, the pair could climb toward £38,000. We will wait for the price to confirm a bottom before recommending any fresh trade in it.

Lastly please check out the advancement's happening in the cryptocurrency world.

Enjoy the issue!

# CRYPTONAIRE WEEKLY

After mentoring thousands of crypto traders around the globe, we have culminated all of the consistent and ongoing requirements of crypto-traders into one place.

Our Cryptonaire Weekly magazine includes expert technical analysis, providing trading opportunities to our subscribers as well as fundamental analysis so our readers can keep up to speed with the current developments in the crypto markets.

Not only do we provide the information necessary to trade active cryptocurrencies on the exchanges, but we also take a look at ICOs to help you find those golden projects with real value!

No longer will you have to rely on multiple sources to keep on top of the markets, we deliver everything directly to your inbox each and every week.

What are you waiting for?

# WEEKLY CRYPTOCURRENCY MARKET ANALYSIS

Hello, welcome to this week's 200th edition of Cryptonaire Weekly Magazine. The global crypto market cap is \$1.87 Trillion, down \$430 billion since the last week. The total crypto market trading volume over the last 24 hours has increased by 57.18% to \$148.29 Billion. The DeFi volume is \$19.82 Billion, 13.36% of the entire crypto market's 24-hour trading volume. The volume of all stable coins is \$117.27 Billion, 79.08% of the total crypto market's 24-hour trading volume.

Bitcoin's price has decreased 6.14% from \$45,225 last week to around \$42,450 and Ether's price has decreased 9.98% from \$3,305 last week to \$2,975. Bitcoin's market cap is \$799 Billion and the altcoin market cap is \$1.07 Trillion.

Traders dumped assets perceived as risky on fears that a default in Chinese developer Evergrande could roil financial markets across the world. Both European and US stock markets witnessed sharp losses on Monday and crypto markets also sold off, though most coins are attempting to start a recovery today. When fear grips the markets, traders resort to panic selling. That creates an opportunity for the informed investor who uses the dips to buy at lower levels after the selling has peaked.

Analyst William Clemente tweeted a new metric Illiquid Supply Floor on September 16, which is derived from combining the popular stock-to-flow Bitcoin price models with Glassnode's illiquid supply data. According to this metric, Clemente believes that \$39,000 will act as a price floor for Bitcoin.

For the long term, Ark Invest CEO Cathie Wood painted a bullish picture for cryptocurrencies. While speaking at the SALT conference, Wood said that Bitcoin could surge to \$500,000 in the next five years. Along with Bitcoin, Wood is also bullish on Ether due to the developments in the decentralised finance and nonfungible tokens space. She said that she prefers a crypto portfolio with 60% Bitcoin and 40% Ether.

Bloomberg Intelligence chief analyst Mike McGlone also remains bullish on Bitcoin. In a Tweet on September 16, McGlone projected Bitcoin to reach \$100,000 by the end of the year.

## Percentage of Total Market Capitalization (Dominance)

Bitcoin	42.71%
Ethereum	18.76%

# CRYPTO TRADE OPPORTUNITIES

## BITCOIN - BTC/GBP

Although Bitcoin rose above £34,398.41 on September 15, the bulls could not sustain the higher levels. The bears pulled the price back below the moving averages on September 20, resulting in panic selling.

The moving averages have completed a bearish crossover and the relative strength index (RSI) has dropped into the negative territory, indicating that sellers are in command. The long tail on today's candlestick shows that bulls are attempting to defend the critical support at £31,011.

However, any relief rally to the 20-day exponential moving average (EMA) and the

downtrend line is likely to attract selling. If the price turns down from this overhead resistance zone, the bears will try to resume the down move.

If the BTC/GBP pair plummets and closes below £31,011, the next stop could be £26,845. Such a deep fall could delay the start of the next leg of the uptrend.

The first sign of strength will be a break and close above the downtrend line. If that happens, the pair could climb toward £38,000. We will wait for the price to confirm a bottom before recommending any fresh trade in it.

[Previous Analysis...](#)

## ETHEREUM - ETH/GBP

We had expected Ether to pick up momentum after breaking above the overhead resistance at £2,587.26 but that did not happen. The ETH/GBP pair turned down from £2,657 on September 16, trapping the aggressive bulls.

The bears pulled the price back below the 20-day EMA on September 17 and the selling intensified on a break below the 50-day simple moving average (SMA) on September 20.

The moving averages are on the verge of a bearish crossover and the RSI is in the negative territory, indicating advantage to bears. If the price sustains below the critical support at £2,149.50, the selling could further pick up momentum and start its downward

journey toward £1,700.

However, the long tail on today's candlestick suggests strong buying at lower levels. The pair could now rise to the 20-day EMA where bears are likely to mount a stiff resistance.

If the price turns down from the 20-day EMA, it will suggest that sentiment remains negative and that will increase the prospects of a further downside.

The bulls will have to push and sustain the price above the 20-day EMA to indicate that the correction may be over.

[Previous Analysis...](#)

## RIPPLE - XRP/GBP

After trading between the moving averages for the past few days, the bears pulled XRP below the 50-day SMA on September 19. This aggravated selling and the XRP/GBP pair broke below the September 7 intraday low of £0.6906.

The bulls are currently attempting to arrest the decline near £0.64 but the relief rally is likely to face stiff resistance at the 20-day EMA. The moving averages are close to a bearish crossover and the RSI is in the negative territory.

If the price turns down from the 20-day

EMA, the bears will try to resume the down-trend. If the price slips below £0.64, the decline could extend to the next major support at £0.50.

A breakout and close above the 20-day EMA will be the first indication that the bears may be losing their grip.

[Previous Analysis...](#)

## CARDANO - ADA/GBP

Cardano rose above the 20-day EMA on September 16 but higher levels attracted strong selling as seen from the long wick on the day's candlestick. The ADA/GBP pair gradually drifted down to the 50-day SMA and plummeted below it on September 20.

This suggests that supply exceeds demand. The moving averages are on the verge of a bearish crossover and the RSI is in the negative territory, suggesting that bears are in control.

The bulls may attempt a relief rally but they

are likely to counter strong selling at the 20-day EMA. If the price turns down from this resistance, the pair could slump to the critical support at £1.33.

This negative view will invalidate if the price breaks out and sustains above the downtrend line.

[Previous Analysis...](#)

## BINANCE - BNB/GBP

Binance Coin rose to the 20-day EMA on September 15 but the bears were in no mood to relent. They aggressively defended the overhead resistance and pulled the BNB/GBP pair below the 50-day SMA on September 17.

The moving averages have completed a bearish crossover and the RSI is in the negative territory, indicating that bears are in command. A breakout and close above £320 will indicate that the correction may be over.

The bulls tried to reclaim the level on September 18 and 19 but could not sustain the price above the 50-day SMA. This could have attracted further selling and the pair broke below the September 7 intraday low of £268.10.

[Previous Analysis...](#)

The long tail on today's candlestick suggests that bulls are attempting a relief rally. If bears do not give up much ground, the pair could resume its down move and plunge to the next support at £240.

## Product Description

Crypto exchange platform accessible through regulated wallet that provides transparency and funds protection.

DeGeThal as crypto currency for everyday transactions: payments or receipts.

Built using latest blockchain technology, DeGeThal wallet allows the flow of crypto and FIAT coins.

### MOBILE BANKING DeGeThal

Support for crypto-FIAT transactions

Payments security is guaranteed by checking procedures superior to the one used by banks.

Guaranteed access to the stored funds through DeGeThal exchange, open banking and DeGeThal wallet.

- Simple and safe storage of your funds
- Connected to the crypto exchange in real time
- Allowing you to pay with cryptocurrency for all transactions, including bills and shopping while enjoying solid security

# THE KANALOA NETWORK A NEW WAY OF DOING THINGS

Kanaloa Network is a decentralized finance token and blockchain solutions provider focused on lowering the technical barrier and broadening the gateway into the world of DeFi. Kanaloa Network is the “NEBULA OF DEFI”, providing casual users an array of user-friendly products and the ability to safely participate in the exciting world of blockchain and decentralized finance with ease.

Kanaloa sets a special focus on releasing the enormous untapped potential of use-case-based non-fungible tokens. Kanaloa aims to create an ecosystem of interest-bearing, privilege-yielding, and playable NFT’s across the platform for an easy and sustainable way to access the network and earn passive income. Kanaloa’s NFT’s act as unique keys to unlock exclusive doorways throughout the network.

The problems DeFi faces today and how the Kanaloa Network will fix them

The obstacle for mass adoption and broad usage of DeFi products lies in the high technical barrier of entry the space presents. New market participants are required to invest a substantial amount of time and resources into researching the space, how it functions, and the potential danger it can present to their product or investment. For institutional investors, like most small to medium-sized companies (representing 90% of worldwide companies and employing 50% of the worldwide workforce today), outsourcing this to a qualified expert is not feasible. Hiring a specialist in-house presents an even bigger financial commitment to such a venture. Assuming

these limitations, the DeFi sector closes itself off to a major part of potential market participants worldwide.

Kanaloa’s simple-to-use Diamond-Token Generator offers a never-before-seen moldability to the projects generated, giving its participants a range of new features to choose from and deploy with a few clicks of a button. This process eliminates the need for an intricate understanding of blockchain programming or expensive outsourcing to 3rd party developers.

With market conditions and regulations changing on a daily basis, retail and institutional investors in the DeFi space are faced with an increasing need for adaptability of their investment vehicles, and products alike. Classical ERC-20 contracts do not lend themselves to flexibility on a trustless basis. Facing the market participants with a dilemma of having a stiff investment vehicle in a rapidly changing environment, or the need for a trust-based open contract system, leaving it vulnerable to the same human errors and manipulation classical financial tools present. As a result, a substantial amount of

institutional and retail investors interested and bound to regulatory compliance and unadaptable products remain closed off to the market.

The Kanaloa Network with the usage of the EIP-2535 standard allows projects to transform alongside the evolving DeFi landscape on the fly. While Kanaloa’s Contract Validation Toolkit will enable users to

research projects of interest and validate contracts existing on the market today. This toolkit will allow everyday users to verify the integrity of existing contracts on the market with an easy-to-understand UI and functionality. The CVT will employ a rating system based on a system of metrics, and distribute a score for each project accordingly. This will give users the ability to “see behind the curtain” for any potentially malicious code or structure, and deliver better investment decision-making opportunities.

### **The enormous untapped potential of NFT's – the power of ERC-1155 and ERC-721 Tokens harvested by the Network**

Supported by a strong foundation of use-cases and a self-sustaining ecosystem, the Kanaloa network offers master keys to the technical doorways presented in the realm of DeFi today. With the goal to unlock the full potential of the EIP-2535 standard, and build a self-sustaining network on a trustless basis via implemented “proof of commitment” mechanics via ERC-1155 “NFT keys”. The Kanaloa network will allow its participants a fully decoupled, decentralized, and adaptable portal to the DeFi landscape of tomorrow.

As the core piece of the Kanaloa Network NFT ecosystem will stand the “World-ender” NFTs consisting of a set of six individual monster cards used to gain key access to the vital parts of the Network itself. Each of these NFTs has its own function and designated use case. These six cards will be available in three different tiers to maximize the spread throughout the active Kanaloa community and network participants. The core NFTs are distributed in a monthly challenge issued by the team throughout the course of the first six months of the project being active. All core NFTs are stackable.

Another core piece for the network lore are the “Kanaloa legends” series is an ongoing, page-by-page produced, graphic novel series exploring the haunted world of the Kanaloa Nebula. This sci-fi horror series is drawn by the established in-house artist team. The Kanaloa legends are another repertoire of NFTs the Kanaloa Network will explore to their fullest potential. With the page-by-page release schedule of the ERC-1155 based pages, this collectible series is the first of its kind and will provide the consumer and creator with a never seen before financial liberty to interact with the collection in different roles, like creator, trader, collector, or simply reader. The Kanaloa Network plans to create a new medium in which creative interaction can take place and IPs can be used to its fullest potential.

The Kanaloa Network will further release a set of collectible ERC-721 & highly limited ERC-1155 art sets

granting access to special auctions to be held on the NFT platform. These special collectibles will be part of an auction process to be announced. The Kanaloa Network aims to work with a set of established artists for these pieces, creating a special blend of access key and fine art for appreciating collectors and investors alike.

### **How the network connects – the Kanaloa Network partners**

Kanaloa has started to build a network of high-quality partners right out of the gate and is proud to count established projects like Reef Finance, Olive Cash, SWFT Blockchain, and Sota Finance within its partners. The Kanaloa Network will build on this and aims to extend its corporation within the crypto space on all fronts. And while calling the BSC home, for now, the Team is enthusiastic to start building on the Reef Chain and extending the reach of the Network with further partnership and chain extensions in their sights.

### **The Team behind the network – who are they**

Formed by a young team of blockchain and business developers coming from all over the crypto space the Kanaloa Network has a unique setup for an optimized production schedule and community management.

All information about the doxxed Team member Florian Pfeiffer can be found on his official [Linkedin profile](#):

Further, can all Team members be found in the official Kanaloa Network Telegram chat willing to answer any and all questions about the project.

### **The next steps – how the network will grow**

With almost all goals reached for this quarter, the Kanaloa team now focuses fully on the development of the network components to keep up the fulfillment rate presented so far. This includes a multitude of updates on a weekly schedule as well as running the ongoing challenges as an exclusive way to acquire the network access NFTs over the next months. The implementation of the ERC-2535 standard provides Kanaloas products and network with unprecedented modularity. This flexibility grants the Kanaloa development team the ability to add or remove an unlimited number of features to products and the network. This moldability will ensure Kanaloa's innovations are on the cusp of blockchain and decentralized finance evolution and secure a competitive market position amongst an ever-changing landscape. With the ERC-1155 and ERC-721 tokens (NFT) as an intricate part of the network governance and reward privileges,

Kanaloa is creating a secondary market for highly scarce, interest-yielding, and privilege granting NFTs of the network. These factors will play a vital role in distinguishing Kanaloa Network from its competitors. To become the premier platform for new DeFi projects and products worldwide, Kanaloa will partner with a number of existing projects within the DeFi space. Partnerships will be formed with the goal to extend the capability and security of the network and its products, and aim to provide a multitude of verified partner products to be implemented into the expanding network.

Karnav Shah, Editor in Chief at Cryptonaire Weekly thinks highly of the Kanaloa project, he explained: “Kanaloa Network has become the “Nebula of DeFi”, providing casual users the ability to safely participate in the exciting world of Blockchain and decentralized finance with ease. Project’s like Kanaloa Network are exciting and we make sure to help them reach the larger crypto community by sharing more about these shapeshifting solutions with our readers and across our community channels.”

The home of the Nebula – where Kanaloa can be found

All information about the project and the network components can be found on the official website [www.kanaloa.network](http://www.kanaloa.network)

All official NFTs can be found in the Sota NFT store [here](#)

All updates and competition can be found in the official Telegram announcement channel

The community and Team can be found in the [official Telegram chat](#)

# RMRK

## AN ADVANCED NFT PROJECT

ZUG, Switzerland – RMRK, an advanced non-fungible token (NFT) project, [has released](#) their Kanaria bird NFT project, ushering in the first wave of next generation NFTs. “The long anticipated release of Kanaria and Bruno, with vision beyond his time, has been able to achieve with the RMRK standard on Kusama what many on Ethereum are still trying to accomplish” says Mahalleinir from D1 Ventures, an early backer.

In March 2021, RMRK launched a gamified “initial collectible offering” called Kanaria, pioneering an NFT-crowdfunding approach that netted them a total of 6 million USD in limited edition egg-NFT sales. Over 8,500 out of a total of 9999 eggs were claimed by participants.

With an innovative feature of on-chain emotes, owners and observers could drop reactions on these NFTs, influencing the look, feel, functionality, and inventory of birds that would “hatch” from the eggs. Starting with September 2021, the eggs have hatched into advanced NFTs on the Kusama blockchain (Polkadot’s value-bearing canary network).

“RMRK NFTs are natively connected to every chain that connects to the [Kusama] relay chain. They are multi-chain by default.”, says Bruno Škvorc, project founder, in an [explainer and announcement thread](#).

With this release, Kanaria is now a full-fledged NFT ecosystem, complete with a secondary market where items (wearables, backgrounds, etc.) are traded between bird owners. The RMRK team is looking to build on its success with Kanaria and make the full RMRK 2.0 standards available for adoption across all substrate-based ecosystems and later into EVM chains like Polygon and Moonriver.

With powerful partnerships with some of the

biggest parachains and candidates in the Polkadot and Kusama ecosystem already sealed, the RMRK standards for NFTs 2.0 are poised to become the first unofficial shared-runtime environment in the Polkadot ecosystem, allowing for seamless teleportation of non fungible assets to and from any supported chain, natively, and at almost zero cost, while the multi-chain evolvable nature of these NFTs opens new, unprecedented doors:

“[...] imagine [...] coming up with a game in the future and simply reusing the NFTs that already exist by adding a new resource to them – giving them eternal liquidity and long lasting forward compatibility without planning in advance [...] imagine if you could put a branded hoodie onto a cryptopunk. How much exposure is that?” – says Škvorc.

Discussing the RMRK Project, CEO Platinum Crypto Academy and Editor in Chief at Cryptonaire Weekly Mr Karnav Shah noted: “ It’s rare you come across an NFT project that explores wider utilities of the blockchain technology and expands the horizons even further. We are truly excited to share the RMRK project and explain its fundamentals to our readers. We are certain that we will have more about this promising venture in our subsequent publications.”

You can learn more about RMRK at [rmrk.app](#), take Kanaria for a spin at [kanaria.rmrk.app](#), and play around with their official minting and trading UI for 1.0 NFTs called Singular on [singular.rmrk.app](#). You can also watch a live demo of Kanaria’s functionality in [this replayable crowdcast](#).

Reach out to the team at [hello@rmrk.app](#), on [Telegram](#), or on [Twitter](#), and read their [blog on Subsocial](#).

# CRYPTONAIRE WEEKLY TO PUBLISH ITS 200TH EDITION

EDITION

Cryptonaire Weekly, the number one crypto trading magazine, by Platinum Crypto Academy, will be publishing its 200th Edition, keeping you updated on the latest cryptocurrency developments. Cryptonaire Weekly is proud to announce the publishing of its 200th edition of the magazine this week, since it was established in 2017.

There is always something new and exciting in the cryptocurrency and blockchain field, and staying up to date opens up opportunities to crypto enthusiasts and investors alike. Just as the name suggests, Cryptonaire Weekly releases a new edition every week in regards to the cryptocurrency and blockchain industry. In the last 199 editions, subscribers have been able to obtain information regarding crypto trade opportunities, reports on new and existing coins, as well as any developments and advancements in the crypto sphere.

Marking the 200th Cryptonaire Weekly Edition, it will be released this week following the ongoing consistent trend without failure. For more than three years now, it is evident that Cryptonaire Weekly has delivered without failure, not only crypto enthusiasts but also to everyone seeking to gain more knowledge about digital currency and blockchain technology.

It is important that investors are able to make sound decisions regarding the crypto market. We ensure that we bring you crypto analysis coverage, backed by information from industry experts and professionals. Karnav Shah, Director of Platinum Media Services and Co-founder and Chief Editor of Cryptonaire Weekly, is and will be working towards ensuring that the entire team comes together to retain reliability, high quality, and up to date content.

There is much more to cryptocurrency that knowing about the existing coins and tokens. The crypto market is inclusive of blockchain projects, and in an effort to have a better understanding of what to expect, it is important to remain up to date and in the limelight of every happening through a reliable source. What better way to gain knowledge that is reliable, efficient and timely than through a crypto-focused platform that takes to heart all happenings in the crypto and blockchain industry?

Supported by Platinum Crypto Academy, subscribers will not only get to know about what is going on in the market but also about what they should expect. As such, Cryptonaire Weekly is seeking to continue providing relevant and reliable information about what is going on in the market currently, but it also provides a forecast on crypto trends to help investors predict different markets and where to invest at a certain period.

Look out for not just the 200th Cryptonaire Weekly Edition but for many more every week of the month.

## THE TEAM BEHIND CRYPTONAIRE WEEKLY

Cryptonaire Weekly, a renowned digitalised crypto publication, is led by the Chief Editor, Karnav Shah. The entire team comprises of market leaders with sufficient knowledge in their fields. The conception of this publication occurred during a time when blockchain and cryptocurrencies was not a favorable industry. However, the company beat the odds through persistent education forums, especially through digital platforms about the industry, and we are proud to currently be a leading information ground for crypto enthusiasts and beginners alike.

## ADVANCEMENTS IN THE CRYPTOCURRENCY WORLD

### BITCOIN WORTH \$2 BILLION MOVES FOR JUST \$0.78

An unknown wallet benefited from Bitcoin's low-fee blockchain yesterday with a transaction worth \$2 billion.

Block data from Blockchain.com reveals that a colossal Bitcoin (BTC) transaction worth \$2 billion was processed on Monday night. Despite the enormous financial value, the unknown wallet holder only paid 0.00001713 BTC fees equivalent to \$0.78.

Although it is unknown what the purpose of this transfer was, or indeed which individual or entity enacted it, what has clearly been showcased is the enormous potential of financial transactions utilizing cryptocurrency and blockchain technologies.

However, this is not the first instance of a transaction of this magnitude with minimal fees. Back in August 2020, a Bitcoin transaction worth \$1 billion was recorded with a nominal fee of just \$4.

Attempts to transfer money of this value in traditional fiat markets would simply be futile. Anchored to anachronistic models, the financial ecosystem stands as a stark outlier to the instantaneous, largely inclusive, modern information services experience.

An international fiat transfer often takes one to four working days to process and includes a hefty transaction fee of 1%–3%. For a transaction worth \$2 billion, this would come at the cost of between \$20 million and \$60 million.

# HOW GENIUX TOKEN LEVERAGES BLOCKCHAIN TO ALLOW PRIVATE INVESTORS TO TAP INTO THE REAL ESTATE MARKETS

With the changing times, people need to get used to the trends. At this moment, crypto investments are the best thing for Millennials and small-scale investors. With proper strategies, one can get a new way of passive income with more stability and higher returns through real estate. Both real estate and crypto token investments are becoming intertwined. The genius estate is becoming the leader in this scenario. This new-age company is using blockchain and the latest technologies to ensure that investors get it easy.

The brand is making the real estate market accessible with its vision. Genius Estates is planning to release its next-level tokens for small-scale investors soon.

This company needs some applause for making everything easier with cryptocurrency. However, before diving into the achievements of Genius Estates, one should understand the basic definition of a token. A token is a digital acknowledgement of money in the form of cryptocurrency. An authority issues tokens through cryptocurrencies. In simple words, it is a digital share in the form of cryptocurrencies. A token can be helpful in buying shares in any project. It can also fetch great returns.

## WHAT IS THE GENIUX ESTATES IDEA?

Genius Estates is bringing something unique to investors. This blockchain investing platform has offered a great idea. It offers a modern and active marketplace for all investors. The idea is to provide various kinds of options in different sectors.

The GENIUX token supports a diverse range of

STOs. The Genius Estates idea is to offer sustainable income to investors. The main idea of Genius Estates is to allow everyone to invest, irrespective of their investment amount. Thus, it wants to democratise the whole real estate. But, if one wants to understand their idea, understand their tokens.

Genius Estates issues cryptocurrency through their advanced GENIUX ICO. A token is a kind of cryptocurrency that one can use for multiple online transactions. It is easily accessible, and Genius sells its tokens in an affordable range. This brand designs its GENIUX token based on the ERC20 standard. It is an Ethereum-based token and has many uses.

## HOW IS GENIUX ESTATES DEMOCRATISING REAL ESTATE?

The conventional real estate transactions were not favourable to small investors. Earlier, there were only a few investment options. One could invest in a property by purchasing it. Then there were also other ways like mortgaging the property to investment. But this kept a large section of investors away. Small-scale investors were unable to invest a large amount due to their economic condition. Hence, they used to avoid this sector. Additionally, the complicated investment laws also discourage them.

All of these changed when Genius started its mission. Now, the GENIUX tokens will become available for small-scale investors. The brand is the first platform to release Ethereum-based tokens. In addition, Genius Estates uses AI-enabled technology to offer unique experiences. Hence, an investor can easily

get STOs through their smartphones. The company plans to issue real estate crypto tokens to investors. This has offered a new way of investing. After that, anyone can invest a small amount on a big project and can get assured returns. The best part about GENiUX is that it offers a diverse path.

GENiUX has the ERC-20 based system. So, how is that different? Firstly, they plan on digitizing real estate projects with blockchain technology. An investor must create an account in a trading platform to deal in STO. These platforms have different rules and may not offer lucrative deals. But Genius Estates has changed all these. Now, an investor does not need to go through a complicated process. GENiUX uses its own marketplace to offer easier tokenization. This platform is easy to use and has multiple opportunities. This company also uses its native ERC-20 GENiUX token. The token is based on the Ethereum blockchain and offers great security. One can use these tokens to invest in different STOs and NFT's.

Hence, investors now do not have to use different marketplaces and platforms. The diverse platform allows the investors to choose different projects. They can invest in a desirable project without any hassle. Furthermore, Genius Estates allows its users to use the native token. That means one token and one platform offer all sorts of investment options. After an investor gets asset allocation, the procedure becomes stable. One can also sell their share of investment through the P2P option in the Genius Estates marketplace. Additionally, they have the option of withdrawing or re-investing it.

**DIVERSE PORTFOLIOS TO INVEST**  
The best part of the platform is their diversity. They pick only the best projects for their investors. Hence, one can get assured returns with guidance. Additionally, it also encourages its investors to share the knowledge. With each referral program, the investors get rewards in USDT, thus further adding to their strength.

This modern brand has now opened the blocked road of cryptocurrency to its users. Now, anyone can be an active investor and participate in economic contribution. Genius Estates plans to circulate one billion real estate cryptos tokens all over the world. The future looks a lot brighter. This way, Genius is changing everything conventional to pave the way for development.

### **OVERVIEW OF GENIUS REAL ESTATE MARKETPLACE**

Genius Real Estate Marketplace has already created a buzz among Gen Z investors. It is something new and unique that everyone needs to check out. Genius Real Estate Marketplace is best for crypto investments in real estate. It is an online marketplace, especially for small-scale investors. The marketplace allows investors to connect with different parties who are interested in selling their NFT's. Genius Estate has come up with a virtual umbrella for projects. It is diverse and widely usable. Additionally, the company plans to grow Genius Estates. They planned to launch Genius assets marketplace this year.

Estates platform makes it possible for you.

It is a new-age e-commerce platform. That means Genius Estates offers investment options on different projects. So, an investor can invest in different projects in a single place. Another benefit of Genius Estates is its direct collaboration. Thus, the brand releases the project itself. It has planned to launch its first ever property in 2021. The Genius Estates exclusive property from Ireland is already in talks. Here, one can use exclusive GENiUX tokens to invest. It is one of the best Ethereum tokens with proper blockchain security.

The Genius Assets Marketplace is a multi-faced site. Anyone can invest in different real estate properties from here. But there are also other options for an investor. It is a movable asset investment program. This company also offers investment scopes in sports. Furthermore, users can invest in artwork that has been digitized and turned into NFTs. The marketplace is an ambitious project from Genius Estates. Investors can also earn their revenues and returns through USDT. Then, an investor can use these tokens to reinvest in the Genius Assets Marketplace. Hence, investors review information and rain updates every time. Moreover, there are experts who guide the investors through the marketplace.

## ADVANTAGES OF GENIUX TOKEN

If anyone is looking for secure and reliable real estate crypto tokens, GENiUX is the best choice. However, it is not a simple token – it is a super token.

Genius Estates have entered into a smart contract with Ethereum. It is offering the first ever token based on the ERC 20 token. The GENiUX token uses the unused cycles of computers and smart devices. Additionally, the token system utilises AI and machine learning to offer protection to its investors during transactions.

Another benefit is the rapid DAG-based crypto. It uses the modern-age blockchain and a fast DAG-based payment system. Hence, the virtual network becomes faster. As a result, faster token allocation and seamless service are now possible.

With artificial intelligence and machine learning, the transaction becomes easier and user-friendly. One does not need to use a special wallet to get STOs. Instead, they can use their cash or bank payment to buy GENiUX tokens. The AI processes all the data and ensures each investor gets a clear and distributed web interface. It protects them from cyber threats and also keeps their identity encrypted.

The GENiUX token system is a hybrid token system. Hence, anyone can buy tokens from any part of the world without any complications except a couple of restricted countries where it's illegal or where the EU have sanctions on them. Everywhere else, there is no need for any special licenses.

GENiUX tokens maintain the industry standard. It is planning to get approval through Estonian regulators. The barns are in the final stage and will get whitepaper approval soon. That means that investors now can trust the GENiUX token system as it has proper regulation.

GENiUX tokens are also easily accessible. An investor can use the tokens to invest in different options. Additionally, they can also receive revenues in tokens.

A user can sell their tokens directly on an exchange which supports their country's currency and use the money as per their wish.

Additionally, Genius Estates also offers a huge number of tokens for its investors. Hence, there is enough scope for anyone.

## IS GENIUX SUSTAINABLE?

Investing in cryptocurrency is changing day by day. Crypto investors these days are looking for more diversification opportunities for their portfolios. Genius Estates helps these investors generate a passive income through a lucrative investment program. You can get your real estate tokens in addition to investing in a wide array of exciting projects.

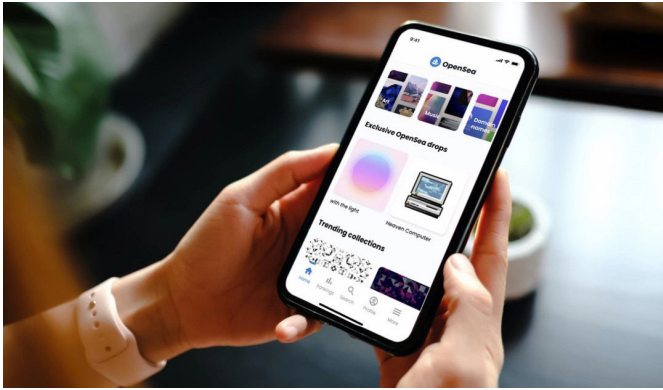

In the near future, Genius Estates envisions digitizing the value of sporting teams. The company will provide investors the opportunity to earn dividends whenever a player is transferred or monetized. They are developing a Genius Saver app, which will be released by next year. There is an impressive roadmap showing the progress and plans they have for the future. To facilitate trades of GENiUX tokens for profit, the company aim is to contribute to the success of investors through its STO opportunities. This ensures the sustainability of Genius Estates, as well as the GENiUX token.

## CONCLUSION

Genius Estates is making its move with the crypto token investment method in the real estate sector. The brand plans to circulate 1 billion tokens based on Ethereum. Besides, it has made a user-friendly marketplace for Genius Estate users. This will allow small-scale and young investors to invest in real estate. With Genius estates, even novice investors will have a chance to dream big.

Additionally, it uses a fast and reliable STO with ERC-20 blockchain to ensure the system remains transparent. Its marketplace will allow investors to select their best possible options. Now, anyone can invest in different projects without any complications and hassle. Geniux has a bright future ahead. In turn, it will also transform the investment scenario of the real estate sector.

## Largest NFT Market by Volume Opensea Launches Smartphone Application

On September 17, the largest non-fungible token (NFT) marketplace in terms of volume, Opensea, announced the launch of the platform's mobile application. Opensea marketplace users can now access a wide variety of NFT collections on their smartphones by downloading the application from Apple's App Store or the Google Play store.

### Opensea Launches Mobile App for iOS and Android Phones

According to marketplace statistics from dappadar.com, Opensea is the largest NFT market in terms of global trade volume. All-time statistics indicate that Opensea has seen 625,620 traders and \$6.53 billion in volume. Axie Infinity and the Cryptopunks NFT collection fall behind Opensea's volume as Axie Infinity has seen \$2.11 billion and Cryptopunks has gathered \$1.31 billion.

In recent times, Opensea has added Polygon (MATIC) support and toward the end of July, the leading marketplace announced a \$100 million capital raise. Opensea has continued to see record sales but on September 15, the company announced that an employee was caught leveraging insider information to trade.

The NFT market's management detailed that Opensea team members "may not buy or sell from collections or creators" while they are being promoted by Opensea. Furthermore, "Opensea team members are prohibited from using confidential information to purchase or sell any NFTs, whether available on the Opensea platform or not," the team detailed last week.

## Crypto Prices Plummet Amid Global Market Fears

The top cryptocurrencies have all fallen amidst a drop in stocks and fears over China's Evergrande.

Leading cryptocurrencies have fallen by double-digits amid a bearish week for the S&P 500 and China's property giant Evergrande's debt crisis.

Crypto's flagship asset, Bitcoin, has largely staved off a decline during the last week, falling only 2.6% in the past seven days.

In the last 24 hours, however, it has fallen by 6.9% to a price of \$45,000. El Salvador's president, Nayib Bukele, has taken the opportunity to suggest "buying the dip" as Bitcoin's price continues to fall. Ever since El Salvador adopted Bitcoin as legal tender on September 7, 2021, the leading cryptocurrency's price has fallen by almost 14%.

Other cryptocurrencies have experienced much more dramatic price crashes in the last week, as well as in the last 24 hours.

One such cryptocurrency is Solana, which has fallen by 19.6% in the last week and 13.5% in the last 24 hours. Solana's bad week is largely down to a 17-hour outage, which Solana founder Anatoly Yakovenko explained as due to bots "flooding the network."

Ethereum has also fallen significantly—by approximately 8.3% both during the week and over 9% in the last 24 hours. It isn't immediately evident why Ethereum has declined in value in the last few days, given that it recently crossed the \$3,600 price mark, and Vitalik Buterin made Time's 100 most influential people list.

# THE BANKING STACK FOR DEFI

## WHY MELD?

MELD is the first DeFi, non-custodial, banking protocol. You can securely lend & borrow both crypto and fiat currencies with ease and stake your MELD tokens for APY.

### CASH LOANS

Get an instant loan against your cryptocurrency holdings at a competitive APR or get a credit line and only pay interest on what you use.

### BUILT ON CARDANO

The MELD protocol is built on the Cardano blockchain, a next generation blockchain delivering fast, safe and cost effective infrastructure for a new generation of DeFi.

### BORDERLESS AND DEMOCRATIC

Economic and political changes can't alter MELD's smart contracts. Our DeFi protocol is safe from changing laws or unexpected events.

### PROTECT CRYPTO HOLDINGS

Don't let today's small expenses erode your crypto investments. Leverage the value of your crypto to borrow cash when you need it.

### DECENTRALIZED AND TRUSTLESS

A world-class DeFi protocol, MELD uses smart contracts to ensure complete transparency and fairness for all parties.

### STABLE YIELD EARNINGS

Let your crypto work for you. Earn yields from our staking pools as well rewards in the MELD token.

## THE MELD Initial Stakepool Offering

or ISPO is a new and unique method for fundraising that is community oriented and safe for all parties involved. To participate, you simply delegate your ADA in your Yoroi or Daedalus to the MELD staking pool and 100% of the rewards go towards fundin

g MELD. Based on the amount of rewards generated and duration your ADA is staked you will be airdropped MELD tokens on launch. We are launching the ISPO before the private sale to give everyone the opportunity to join in early and reap the rewards.invidunt ut labore et dolore magna .

## Cryptocurrency Is Picking up Steam in Small Cities in India

Cryptocurrency usage and trading are experiencing a boom in India, and most of this growth is coming from small cities. According to reports from local exchanges, the growth has been exponential. The profile of these new participants has also been interesting, as they are highly educated, not only focused just on bitcoin, and are open to diversifying their portfolios with more exotic offerings.

**Crypto Grows in India's Small Cities**  
Cryptocurrency usage and trading are being embraced by Indian citizens as a way of investing and gaining additional money after the Covid-19 pandemic, according to reports from regional media

outlets. But what's more interesting is that this growth is even bigger in small cities, where interest in cryptocurrency is reportedly peaking.

A local exchange, Wazirx, reported amazing levels of new customers coming from these small cities, that are classified as tier-2 and tier-3 cities. The exchange reported users signups from these cities have grown by 2,648%. Wazirx CEO, Nischal Shetty, told the India Times that:

*"Tier-2 and tier-3 cities have driven almost 55% of total user sign-ups on Wazirx in 2021, thereby overtaking tier-1 cities, which demonstrated a sign-up growth of 2,375%."*

## El Salvador Buys the Bitcoin Dip as Top Coins Tumble

Amid a broader crypto market crash, El Salvador's President moves to add 150 Bitcoin to the country's stash.

Nayib Bukele, the president of El Salvador, revealed that the Latin American country has purchased 150 more Bitcoin while prices were declining on Monday morning.

According to data from CoinGecko, the leading cryptocurrency plummeted by 6.9% over the last 24 hours, changing hands around \$45,000

by press time.

Other top cryptocurrencies, including Cardano (ADA), XRP, Solana (SOL), and Polkadot (DOT), all shed double-digits over the day, while Ethereum, the second-largest cryptocurrency by market cap, is down 9.2%, currently trading at \$3,137.

"They can never beat you if you buy the dips," Bukele tweeted, adding that this can well be considered "presidential advice."

With the latest purchase, El Salvador now holds 700 Bitcoin worth

about \$31 million.

Bukele's government purchased its first 400 Bitcoin on September 6, the day before El Salvador became the first country in the world to formally recognize cryptocurrency as legal tender.

# DIRTY FINANCE

## A DIRTY DEAL ON HENTAI NFTS

### FROM CRYPTO PROJECT

As people sought a different option to trade assets, NFTs first appeared in 2015 as a way of transferring assets and later on collectables. A major surge in popularity occurred in late 2017 when crypto punks and crypto kitties arose. With each passing minute, NFTs are becoming more popular. Since NFTs are unique and valuable, they have become the latest trademark for the rich to display their wealth.

Among non-fungible tokens (NFTs), there was a jump in online sales in early 2021. The NFT market also broke a few records, and many investors were interested in investing. Recently, a new type of NFT was introduced – the hentai NFT. Dirty finance stands out as one of the best hentai NFT projects. This article will teach you everything you need to know about dirty finance.

#### **WHAT IS DIRTY TOKEN?**

Dirty finance creates non-fungible tokens based on the hentai genre. The project is Ethereum-based, and its native token is called DIRTY. Dirty finance is a brand new token developed to attract investors by allowing investors to purchase rare NFTs. The Dirty Finance rare NFTs are available for purchase with DirtyCash, which can be earned by farming \$DIRTY. The biggest holders of NFT can get the rarest ones. There are only a few non-fungible hentai tokens, and only large token holders can buy them. These exclusive nude dress NFTs are available to token holders of rank 5. In contrast, the lowest grade is also assigned to NFT characters with full dress.

#### **WHAT IS CRYPTO TOKEN STAKING?**

Token holders can take advantage of the size of

their crypto holdings by staking their crypto. This is one of the best ways to maximise the benefits. The concept of staking is relatively new to investors, and many investors confuse the returns associated with staking coins with the security offered by bank deposits. Earnings for stakes are determined according to the ratio of your stake to that of the network. When your stake is higher than the network, you have a greater chance of mining a block, thus receiving more rewards.

In spite of this, Stakers are responsible for certain aspects of the network. Some stakeholder systems require stakeholder voting on major decisions or that require stakeholder validation of transactions. In the event that you fail to meet these responsibilities, you could lose your coins. Staking through a cryptocurrency exchange or pool makes these requirements automated and pays your rewards. In general, staking some tokens earns you rewards.

#### **WHAT ARE STAKING REWARDS FOR THE DIRTY TOKEN?**

Dirty finance rewards its stakers with great rewards. They offer holders the opportunity to earn Dirty cash. Dirty cash can be used on dirty finance as a currency. The stakeholders can earn dirty cash per min, per \$DIRTY, or per LP V2 Token. Compared to standard staking, the LP token would offer stakers the fastest and most efficient way to earn DIRTY cash. Token holders will earn more DIRTY cash faster with LP tokens than by doing standard staking. LP staking limits are lower, so once you have staked all of your Dirty, you are better off stake the rest in standard staking. A standard pool using \$DIRTY will

have a limit of 2 Billion at maximum.

In contrast, the LP Token pool will entail a maximum of 10,000 tokens. The maximum limit per wallet would mean that one whale would not be able to obtain NFT's as rapidly as before. In turn, this will push prices up as investors hold on to their investments longer. Below are the rewards to dirty finance stakeholders.

# CRYPTONAIRE

# THE STAKING REWARDS FOR THE DIRTY TOKEN

\$DIRTY	Rewards
REWARDS FOR REDISTRIBUTION	Earning more rewards at Dirty is possible for investors. Even if you choose not to stake, you will still receive your <b>2%</b> redistribution. The users are also eligible to <b>earn 1%</b> of the leaving tax deducted from stakers who leave between stakes.
RARE NFT REWARDS	Dirty token holders can obtain rare NFTs by holding them for long periods.
EARN DIRTY CASH	Using DIRTY tokens or DIRTY LP tokens will earn you Dirty cash. If a wallet enters the staking pool for the first time, it will receive <b>200 Dirty Cash</b> as a gift.
INNOVATIONS IN NFTS	Through their creative use of the NFT, they also give the <b>NFT innovative power</b> , such as an online casino. In casinos, they seek to make a profitable trade and provide value to token holders.

## REWARDS FOR REDISTRIBUTION

Is it still possible to earn redistribution while staking? This question has an obvious answer, which is yes. Earning more rewards at Dirty is possible for investors. Even if you choose not to stake, you will still receive your 2% redistribution. The users are also eligible to earn 1% of the leaving tax deducted from stakers who leave between stakes.

## RARE NFT REWARDS

Dirty Finance NFT's can only be obtained by staking without having to spend any Dirty or Ether. Currently, minting costs are around \$10. Dirty token holders can obtain rare NFTs by holding them for long periods.

## EARN DIRTY CASH

Using DIRTY tokens or DIRTY LP tokens will earn you Dirty cash. If a wallet enters the staking pool for the first time, it will receive 200 Dirty Cash as a gift. It's possible for a staker to earn a 1-star NFT for less than 200 Dirty cash when making their entry. Furthermore, they can accumulate Dirty cash to take advantage of the rarer, less clothed, higher starred NFTs over time.

## INNOVATIONS IN NFTS

Through their creative use of the NFT, they also give the NFT innovative power, such as an online casino. In casinos, they seek to make a profitable trade and provide value to token holders.

## HOW STAKING DIRTY TOKENS WILL WORK

The process of staking dirty tokens is quite simple. A Dirty staking contract will enable holders to connect their wallets to Dirty finance so that staking can take place. After that, they must choose how much \$DIRTY they want to stake. A person can confirm their choice of the right amount.

Dirty tokens are not added to your wallet when staked but appear on the website as staked amounts instead. Those interested in liquid pool tokens can also stake on uni swap, which is created by combining Dirty and Ethereum. The amount that wallet holders can stake per wallet will be limited. By securing a limited number of NFTs in each wallet, one whale will be kept from collecting them too rapidly, thereby reducing their price.

## DIRTY CASH & OH DIRTY PACK EXPLAINED

### DIRTY CASH

Dirty cash is the currency users can use on the dirty finance platform. For each new account, they are providing 200 dirty cash. Dirty cash users can choose from 15+ NFTs to purchase with dirty cash. Investors can purchase the lowest grade NFTs

immediately with 200 dirty cash. In contrast, if users want to bet dirty cash for long periods, they can buy rare NFTs. The long-term holder of dirty cash can increase their cash value. There will be a chance to win merchandise NFT, through which holders can redeem real-life merchandise free of charge. The company plans to introduce dirty cash for purchasing merchandise and custom toys.

### OH DIRTY PACK

A high level of the gas fee was present in the NFTs. On the other hand, Dirty Finance wasn't supposed to charge investors \$400+ gas fees. Therefore, all the NFTs from ETH were to be minted and stored on Binance Smart Chain. As a result, they can make these for just 2-3 dollars. The Oh Dirty Pack has demonstrated that this has a huge demand through its experience and feedback. You can still get this if you hold over 100m on the website.

## CONCLUSION

Parabolic growth has been observed in the market for digital assets since the first NFT venture was announced in 2017. NFT collectables sales surpassed US\$2 billion in 2021, resulting from a growth rate of 1785% to 2100% in the first three months of the year alone. The emerging market's value is already \$20 billion higher than it was in 2020, which remains highly optimistic for 2021.

Hentai was always an interesting niche, and now that it's easier to access, many people are starting to participate. Several intense bidding wars have resulted in some odd sales, which are interesting to observe. As a Hentai project, Dirty Finance stands out as the best name.

They offer many benefits to holders of dirty tokens. The company has several amazing benefits planned for quarter 3 of 2021, along with numerous benefits. Their goal is to set up tier systems for stakeholders. This way, token holders with large amounts of tokens can use the platform to acquire rare NFTs. Furthermore, they are planning to develop 3D models of the Hentai characters for NFTs. Investing in cryptocurrency through dirty finance is an excellent option for users.

## European Football NFT Platform Sorare Raises \$680M Series B

**A**TTThe raise values the company at \$4.3 billion.

Sorare is taking on the future of sports NFTs with record-setting support.

The European fantasy soccer and digital collectible platform announced a \$680 million Series B raise on Tuesday, the largest ever in the non-fungible token (NFT) space.

The round's lead investors include SoftBank Vision Fund, LionTree, Bessemer Ventures, IVP, Hillhouse and Atomico. The funding round values the company at \$4.3 billion.

Sorare says it's traded over \$150 million worth of digital cards on its platform since January and currently has over 600,000 registered users.

From Q2 2020 to Q2

2021, the company saw its sales increase 54x from the previous year. The Paris-based company says it will use the new funds to accelerate growth and venture outside the touch lines of soccer collectibles.

CEO Nicolas Julia said in a press release he sees an opportunity to "introduce the same proven model to other sports and sports fans worldwide" and will be opening a U.S. office in the near future.

The company is eyeing basketball, American football and baseball as the next targets for its current model, a representative told CoinDesk in an interview.

## JPMorgan says Ether Is Overvalued at Current Prices and DeFi's Institutional Adoption Is Above 60%

Banking agent JPMorgan noted in its latest crypto report that decentralized finance (DeFi) adoption by institutional investors increased in the second quarter of 2021.

This growing adoption is shown by more than 60% of all DeFi transactions being

worth over \$10 million compared to less than 50% for all cryptocurrency transactions. And these institutions from major economies are driving the DeFi activity with emerging markets adopting crypto assets.

JPMorgan's data seems to be derived from

Chainalysis' report on its "Global DeFi Adoption Index" released last month, which defines that above \$10 million as large institutional transactions. Chainalysis noted in its report,

"Large transactions make up a much bigger share of DeFi activity, suggesting that DeFi is disproportionately popular for bigger investors compared to cryptocurrency as a

whole."

Additionally, the US, China, Vietnam, the UK, and several other Western European countries rank high on this DeFi Adoption Index.

The fast-growing DeFi sector currently has \$165.87 billion of total value locked (TVL) in it, down from almost \$190 billion at its peak on Sept. 6.

# ALL YOU NEED TO KNOW ABOUT BEATBIND'S BBND TOKENS – THE HOTTEST BET IN THE MUSIC INDUSTRY RIGHT NOW

Everyone enjoys music. Regardless of any genre, music has become an integral part of life and an effective medium for exchanging culture. Music is not just entertainment; it is a large, capitalised industry. It is estimated that the global music industry amounted to \$53.77 billion and is estimated to rise at 10% every year for the next 5 years. The music events industry is projected to have a 4 times higher growth rate than any other entertainment industry in the world. These are all generated from ticket sales, albums, digital, etc.

The music industry has great potential and will continue to grow in the future. Though the music industry, especially the live shows and events, seems to be running smoothly, many complications prevail among the musicians, event organisers, and the general public who are fond of music.

## WHY IS THE MUSIC INDUSTRY RIPE FOR INNOVATIVE INTERVENTIONS?

The current state of the music industry is highly fragmented, with everyone's networks limiting their reach and potential. Despite the significant growth and popularity, the music industry is largely old-fashioned and undigitalised. Music events reveal a surprisingly chaotic ecosystem: where slow and manual negotiations are the norm, with no forecasting and data analytics. Scalping and ticket forgery steal value from organisers, and a lack of data mining and collection in the industry makes revenue predictions inaccurate, which in turn makes events risky ventures – hurting artists, venues, and fans equally. The music industry is lagging far behind other industries in adopting open digital solutions.

Sometimes, music organisers also find it difficult to get help in organising their events, because of their limited network. This is a common problem in organising music events. When you visit a music event where the artist you like is performed, you may meet thousands of people who want to see the performance of their favourite artist. You may feel that this is like bread and butter for the music organisers, but this is stressful for them because it is too complicated to organise music events; for example, such as inviting artists, promoting music events, selling tickets, etc.

Crypto for the music industry? The advent of blockchain technology has disrupted the conventional flow industries. It digitalised everything, making the systems decentralised. With the increase in the number of tech-savvy and digital-savvy customers, enterprises are urged to make their digital presence a better one. And this suits the music industry as well.

## BEATBIND FILLS THE GAPS

BeatBind is one of the most-awaited innovative crypto projects for the music industry, with BBND being the cryptocurrency token used for all transactions. BBND is a token launched by BeatBind. These new crypto coins serve as a utility token to be used for music events. These crypto coins allow users to make payments safely, quickly, and securely. BeatBind plans to design this token so that it can be accepted in the music event industry, so that people don't need to use physical chips, cards, or dozens of different currencies for every music event, just

BeatBind tokens for all music events.

BeatBind is the industry's long overdue platform for organising a music event. The BeatBind platform aims to create an ecosystem that will connect musicians, venues, event organisers, and fans for music events. BeatBind will capitalise on the high demand for the best artists, organisers, and venues, and increase artist booking rates significantly using various auction models. BeatBind will give rising artists more opportunities, both locally and globally. Furthermore, fans will be able to directly purchase tickets from organisers of all events created on BeatBind using these new crypto coins, preventing fraud, forgery, and ticket scalping. With BeatBind, everyone can organise a music event easily, cheaply, and quickly, or just buy tickets for music events, and many other things that can be done with BeatBind. Musicians, venues, event organisers, and fans can connect and support one another with BeatBind. There is no problem regarding quality performers, lack of connections, agencies, etc., because with BeatBind, venues and organisers can bid on artists, artists bid on the event organisers and venue owners, and can outsource event organisation to the managers. In this way, all parties in the music events industry will benefit.

#### LET'S DO A QUICK BEATBIND REVIEW

BeatBind is developing a multi-stage business model with each level being foundational and accretive to the following platform level, to tackle each of the industry's four prevailing issues with the creation of BeatBidder, BeatBuy, BeatX, and BeatAI.

BeatBidder: Platform that connects venues, DJs, artists, and all other parties involved increase revenues for artists and venues. BeatBidder is beneficial to all the parties in the music industry:

- Music groups – BeatBidder let venues and organisers bid on you, increasing your revenue
- Event organisers – BeatBidder let musicians bid on your opportunity, so you lower your expenses, and get the best
- Venue owners – BeatBidder outsources event organisation to the most passionate managers

BeatBuy: The ticketing platform is available by default for every event created on BeatBind. With this feature, it is possible to solve the problem of ticket scalping and forgery. It provides seamless ticketing, as well as seamless crowdfunding for all BeatBind events. The potential benefits for the same are:

- Direct access to tickets for all BeatBind events

-Transparent pricing, no chance of fraud, forgery, or ticket scalping

-Fans can pre-purchase, return tickets, and get refunded

-The platform supports the pre-purchase of tickets allowing an initial inflow of capital to organisers, and gives smaller venues the means to bring in big stars. All money is refunded to the fans if the event doesn't materialise.

BeatX: BeatX is a mobile application to enjoy event-oriented experiences like dating. The organisers can share clips and promos of the events to keep the fans engaging with the event they are about to attend. To protect all parties involved in the event creation and to ensure integrity, BeatX has a rigorous escrow protocol for refunding the money in case of disputes and failed transactions. BeatX allows the fans to connect and date like-minded people who attend the same event.

BeatAI: The lack of data mining, collection and analytics in the traditional music industry has failed to produce proper insights and projections for the industry players. BeatAI uses bespoke technologies like machine learning and artificial intelligence to make accurate revenue estimations that will help participants in decision making for the event.

#### WHAT IS THE UTILITY OF BEATBIND TOKENS?

BBND tokens are new crypto coins launched by BeatBind. The ultimate vision of BBND is to be a universal medium of exchange for the music events industry. BeatBind is a utility token, and allows users to make payments safely, quickly, and securely. BeatBind plans to design this token so that it can be accepted in the music event industry, so that people don't need to use physical chips, cards, or dozens of different currencies for every music event; just BeatBind tokens for all music events. The Ethereum blockchain provides all the privacy, security, and decentralisation that such a token deserves.

The long-term goal is to achieve a stable value for BBND in future, which is not much guaranteed, and as they need to reach a point where BBND becomes a method that can also be used for activities outside the music community such as buying food etc., the platform will give an incentive in BBND for every user referred to the platform, as well as a percentage of all proceeds that the referee generated for BeatBind. In the earliest phases post-launch, there will also be an unconditional bonus in BBND for all users of the BeatBind platform.

These new crypto coins will be traded on public exchanges, but BeatBind platform users are

protected from price volatility during everyday use. BeatBind has offered the BeatBind tokens to investors and the public through a public crowd sale. BeatBind tokens are listed on [www.STEX.com](http://www.STEX.com) to provide liquidity outside the BeatBind platform. BBND can also be exchanged with other assets and crypto coins such as Bitcoin and USD. Again, as per BeatBind, the main thing that will ensure the long-term growth of the BBND is a healthy core business behind it. BeatBind plans to have a sound business model that is non-intrusive to the users, and the value capture on BeatBind will help it grow, and reinforce the fundamentals and the utility of the BBND tokens.

**CORE STRENGTHS OF THE BEATBIND PROJECT**  
 BeatBind combines both bleeding-edge and tested technology to bring performance enhancement and flexibility to its ecosystem. These new crypto coins of BeatBind are implemented as an ERC20 standard token on the Ethereum blockchain network. Such revolutionary features of BeatBind makes it a promising innovative crypto project for the music industry. It will change the look and feel of the music industry, enabling people to experience live music like never before. The Ethereum blockchain network gives the following properties to the BeatBind platform transactions:

**Security:** Transactions will be secured by cutting-edge cryptographic protocols

**Transparency:** As all the transactions on the blockchain are verified and accessible by anyone

**Immutability:** As every transaction on the blockchain

is permanent and cannot be reversed

These make all the transactions on the BeatBind platform open, browsable, and verified.

Another thing in the favour of this innovative crypto project is its sound business model. BeatBind is non-intrusive to the users, yet flexible enough to withstand market shifts and scalable enough to always capture a good part of value that is being created on the platform. The platform has different revenue streams. The core revenue will come from:

- Fees from all transactions on BeatBidder, including artist performances, event organisation, venue leasing, etc.

- Fees from ticket sales of BeatBind events

The other potential streams of revenue for the platform are:

- Fees from promoting artists and venues in platform search results

- Fees from crowdfunding for pre-event sale of BeatBind events

- Subscription-based revenue for enhanced fan app features like dating, live song bidding, memorabilia, etc.

- Fees from live song-bidding, backstage access bidding, etc.

- Revenue from advertising in platform and app feed

The BeatBind team is passionate for music and technology, and have a proven track record in finance, development, and marketing. The team of experts are working relentlessly to deliver their vision for the welfare of musicians, event organisers, venue owners, and fans. Doc Ish, the Chief Innovation Officer of BeatBind, is a Grammy Award winner, VMA Winner, multi-platinum, producer/artist, producing Eminem's comeback single "We Made You", reaching top 10 on the US 100 Billboard charts. His creativity and exposure in the music industry delivers over 20 years of experience to the BeatBind team.

## CONCLUSION

According to market research, there are approximately 375 million active fans spread throughout the world, with an estimated market of \$53.77 billion in the global music industry. If we look at this data, the global music industry has great potential and will continue to grow in the future. However, despite the large market potential, it is often difficult for organisers to hold music events. Organisers often get stuck with problems with quality performers or venues, lack of connection and agencies, or a slow third person. These problems slow down the organisation of a music event.

Crypto for music industry is still in its nascent stage. In the above BeatBind review, we saw that the BeatBind platform aims to create an ecosystem that will connect musicians, venues, event organisers, and fans for music events. This innovative crypto project has been revolutionising the music industry and completely changing the way it operates. BeatBind ensures that every party within the music event organising industry benefits in terms of increased revenue, bidding opportunities, reduced expenses, and outsourcing event organising to some highly passionate managers.

Hence, there is no denying that this platform is useful for anyone who is looking for a platform where there is only one unified payment method, which is secure and very useful for crowdfunding of different events. The platform itself provides a whole lot of functionality, and the BBND tokens are the key to achieve this long-term goal to solve this problem in the music industry where everyone must go through so much hassle for organising, participating, and attending an event or concert.

## Traders buy the Bitcoin dip even as Evergrande's implosion rocks stock markets

The Evergrande fiasco appears to be driving the correction in global stock markets, but data shows this isn't deterring pro traders from buying the BTC dip.

Bitcoin (BTC) investors seem concerned about the increasing speculation that China's second-largest property developer, Evergrande Group, will default on its \$300 billion in debts. These fears manifest in global equities markets which saw a 1.5% to 3% drop at this morning's market open.

Despite the price move, the BTC outflow (net withdrawals) from exchanges has continued a multi-month trend, particularly on Coinbase Pro.

Traders also know that every exchange has a different user profile.

For example, liquidations on Bybit tend to be more extreme when compared to FTX, which is known for having more conservative clients.

Take, for example, today's drop below \$43,000, which caused a \$1 billion long contracts liquidation led by Bybit even though there was \$2.34 billion in futures open interest. This number is lower than Binance's \$3.66 billion and FTX's \$2.51 billion liquidations.

The data above shows that Bybit traders are more risk-takers, typically using higher leverage. Meanwhile, Binance and FTX derivatives investors were proportionately less impacted by the 11% daily negative move.

## Solana Investors Shrug Off Network Outage Last Week As SOL Sees Another Wave of Institutional Capital: CoinShares

Institutional investors are unphased by Solana's recent network outage as they continue to pour capital into SOL, according to crypto asset management firm CoinShares.

Last week, the smart contract platform Solana (SOL) suffered a distributed denial-of-service (DDoS) attack that caused the network to go offline.

However, Solana developers managed to restart Solana's mainnet and restore functionality just hours after the attack began.

According to a weekly inflow analysis conducted by CoinShares, institutional investors shrugged off Solana's

network outage and added a net total of \$4.8 million to their positions last week.

"Solana, despite recovering from a network outage caused by a DDoS attack, saw inflows of US\$4.8m. This suggests investors were happy to shrug off the attack, seeing it as teething problems rather than something more inherent with the network."

As for Bitcoin (BTC), the asset management firm says that the top crypto asset has seen relatively low inflows over the past week totaling \$15 million. The firm points out that Bitcoin has been steadily losing its grip on CoinShares' total assets under management since the beginning of this year.

## \$OMNIA TOKEN

OMNIA Tokens are exchange and utility tokens on BSC within our ecosystem used for crowdfunding to build company operations and platform.

### OMNIA APP COMING SOON

Tokenise your art or house Sell 49% and keep control Swipe right to trade

#### Real-world assets

The world is full of things of value that cannot easily be turned into spendable cash.

#### Tokenisation

It is now possible to create fractionalised co-ownership tokens for any asset.

#### Liquidity

With Omnia DeFi, you can tokenise to gain liquidity or buy into any asset worldwide.

#### Universal access to wealth creation

We believe in a more abundant world with upward mobility for the masses.

# US Homeland Security Signs a \$1.4 Million Deal with Coinbase Analytics

The crypto exchange signed its largest “law enforcement sensitive” federal deal yet for its Coinbase Analytics software.

The Immigration and Customs Enforcement (ICE) branch of the US Homeland Security has inked a \$1.36 million deal with the cryptocurrency exchange Coinbase.

According to the Federal Procurement

Data System, this contract has been given for “business application” and “application development software.” The contract further reads, “This requirement is LAW ENFORCEMENT SENSITIVE[sic], therefore minimal information will be provided publicly.”

According to the contract summary, the deal uses Coinbase’s blockchain tracing software, Coinbase Analytics, for \$455,000 for one year, which goes up to

\$1.4 million if extended through 2024.

This isn’t Coinbase’s first contract with the ICE, which paid the company \$29,000 for its forensic software on the basis that Coinbase was “the only vendor who can reasonably provide the services required by the agency.”

The latest deal is worth more than 40x

of the last time and is Coinbase’s largest federal contract yet.

Last year, it became public that Coinbase wanted to sell its analytics tool to two US government branches: the Drug Enforcement Agency and the Inland Revenue Service.

# Binance reportedly under investigation in the US for insider trading

Binance could be under investigation of a US financial regulator over accusations of insider trading

Binance, the world’s

largest cryptocurrency exchange, is under a fresh investigation by United States Commodity Futures Trading Commission (CFTC) for possible

insider trading and market manipulation.

## Binance under CFTC radar

A Bloomberg report whose sources were anonymous revealed that CFTC, the agency responsible for regulating the U.S derivatives markets, is examining the possibility that Binance or its staff exploited customers by taking advantage of its trading activities.

Per Bloomberg, “as part of the inquiry, U.S. officials have been looking into whether Binance or its staff profited by taking advantage of its customers ...

The review involves Commodity Futures Trading Commission investigators, who in recent weeks have been reaching out to potential witnesses.”

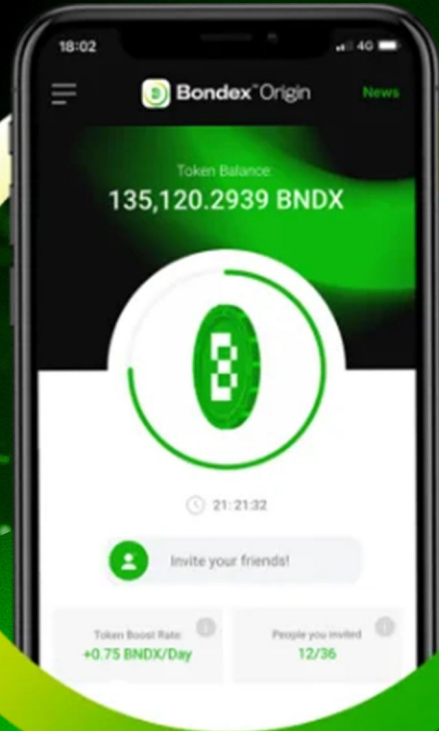

While speaking on the development, a Binance spokesperson told newsmen that the exchange had a strict observance of the ethical code. He said that Binance has “a zero-tolerance policy for insider trading and a strict ethical code related to any type of behavior that could have a negative impact on our customers or industry.”

# El Salvador Exempts Foreign Investors From Tax on Bitcoin Gains

**E**l Salvador embraced Bitcoin as legal tender last week—the first country in history to ever accept any cryptocurrency as legal tender.

El Salvador is exempting foreign investors from paying tax on their Bitcoin gains, according to Agence France-Presse (AFP).

“If a person has assets in Bitcoin and makes high profits, there will be no tax. This is done obviously to encourage foreign investment,” Javier Argueta, legal advisor to President Nayib Bukele, reportedly told AFP.

“There will be no taxes to pay on either the capital increase or the income,” he reportedly added.

El Salvador's Bitcoin bet  
Last week, El Salvador formally accepted Bitcoin as legal tender

after months of anticipation.

But despite praise from Bitcoin's most faithful, Bukele's government has been heavily criticized.

Earlier this summer, the World Bank refused a request from El Salvador to help the country roll out its plan to make Bitcoin legal tender. The organization cited environmental and transparency concerns.

“While the government did approach us for assistance on Bitcoin, this is not something the World Bank can support given the environmental and transparency shortcomings,” a World Bank spokesperson said in July.

## Coinbase Drops Planned ‘Lend’ Program After SEC Warning

The SEC said it would sue Coinbase should the exchange launch Lend.

Coinbase is no longer launching its crypto lending product, the company said Friday.

In September, the exchange's CEO Brian Armstrong announced the U.S. Securities and Exchange Commission (SEC) had told Coinbase that it would sue the exchange if it launched the product, dubbed “Lend.” Coinbase later quietly updated a June blog post to announce “we are not launching the USDC APY program announced.”

The lending product was supposed to power a crypto savings account that would earn customers a 4% annual percentage yield (APY), a return that's multiples higher than most savings accounts at traditional banks.

The SEC said Lend would violate long-standing securities regulations, pointing to U.S. Supreme Court cases including *Howey* and *Reves*, Coinbase Chief Legal Officer Paul Grewal wrote in a blog post.

Coinbase's decision also comes on the heels of state securities regulators issuing warnings to crypto lending platforms BlockFi and Celsius, claiming these companies' products violate state securities laws.

A Coinbase spokesperson referred CoinDesk to the June blog post when reached for comment.

## Cardano To Spark Largest Explosion in Crypto Innovation Since Launch of Ethereum, According to Coin Bureau

The host of Coin Bureau says that Cardano can spark a massive new wave of crypto innovation that will rival the launch of Ethereum.

Pseudonymous analyst Guy says tells his 1.36 million subscribers that with many decentralized applications (DApps) set to launch on its mainnet, Cardano is providing massive opportunities.

“We are now on the brink of another explosion in crypto innovation, the likes of which we haven’t seen since Ethereum launched back in 2015, and early adopters will stand to reap the greatest rewards.”

Guy says that one reason users and developers

are drawn to Cardano is because of its unique staking system, which – according to him – makes it one of the most decentralized cryptocurrencies on the market.

“The staking rewards decline if there is too much Cardano in a single pool. This encourages decentralization...

ADA’s staking rewards are currently around 4.5% per year, and the fact that there is no staking lock or unlock time makes it a no-brainer to do so, hence, why nearly 70% of ADA’s supply is currently being staked. This makes Cardano the highest valued blockchain by active stake.”

## Brazil Investment Bank to Offer Bitcoin and ETH

Brazil’s biggest investment bank, BTG Pactual is launching direct bitcoin and ethereum buying and selling through a new platform called Mynt.

“We will make available bitcoin and ethereum trading to meet the demand from our customers who wish to invest in cryptos,” Roberto Sallouti, the CEO of BTG Pactual, said before adding:

“As a new asset class, we will also have content to educate and inform our customers about these assets and

the technology.

For those who want to invest in these assets, we always recommend that it be a small portion of your portfolio, up to 2% of your investment portfolio.”

BTG Pactual also provides wealth management, corporate lending, and asset management with it having about \$2 billion in revenue a year and \$72 billion in assets under management.

The bank was co-founded by Brazil’s current Minister of the Economy, Paulo Guedes, back in 1983 with the

Brazilian government, both the current administration and previous ones, generally appearing to be quite friendly towards cryptos.

BTG Pactual also launched the Bitcoin 20 Multi-Market Investment Fund in April, “the first bitcoin fund launched by a Brazilian investment bank,” according to Gemini which is to act as its custodian.
