Weekly Cryptocurrency Market Analysis

Hello crypto traders welcome to this week's edition of Cryptonaire Weekly. The overall cryptocurrency Market Cap stands at \$169 Billion We have seen a \$15 Billion decrease in the Market Cap since the last week. Bitcoin price currently around \$5240 and ether price is currently at \$157. The current market cap for bitcoin is \$92 Billion and for altcoins the current market cap is \$77 Billion.

Percentage of Total Market Capitalization (Dominance)

| | |
|--------------|--------|
| Bitcoin | 54.84% |
| Ethereum | 9.86% |
| Bitcoin Cash | 2.53% |
| Litecoin | 2.53% |
| Ripple | 7.33% |
| Dash | 0.57% |
| NEM | 0.29% |
| Monero | 0.61% |
| IOTA | 0.49% |
| NEO | 0.36% |
| Other | 20.59% |

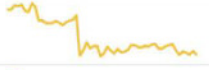

Bitfinex and Tether were in the news as the New York Attorney General's office alleged that the exchange had secretly transferred funds from Tether to coverup its \$850 million loss. Tether, on its part, categorically denied the allegations. The markets have given the benefit of doubt to Tether as its price has clawed back after dumping initially on the news.

After the initial pullback from the lows, the altcoins are currently facing profit booking. As a result, Bitcoin's dominance that had slipped to about 50% in the early part of the month has again climbed to 54.9%. Tom Lee, managing partner and head of research at Fundstrat Global Advisors, believes that the bear market in Bitcoin is over and the price is now headed higher. He expects the leading cryptocurrency to reach lifetime highs sometime in 2020.

We, however, believe that the next bull market will face a lot of hurdles as the investors stuck at higher levels will liquidate their positions at intermittent intervals. Hence, it will be a gradual move higher. Investors should be careful at what levels they are investing. Even Masayoshi Son, the billionaire founder of SoftBank Group Corp., had to book a \$130 million loss on Bitcoin due to an ill-timed purchase.

Crypto Trade Opportunities

BITCOIN - BTC/USD

Bitcoin turned down from close to the overhead resistance of \$5,777 on April 25. Since then, the bulls have been attempting to defend the 20-day EMA but have failed to pull off a meaningful bounce off this support.

The 20-day EMA has flattened out and the RSI has also dipped to the midpoint. This points to a consolidation in the near term. The cryptocurrency might remain range bound between \$4,778 and \$5,777 for the next few days.

Our view will be invalidated if the bears sink the price below the support of \$4,778 and the 50-day SMA. Such a move will dampen sentiment and result in a quick fall to \$4,000 levels. On the upside, the overhead resistance zone of \$5,777 to \$6,000 is a difficult hurdle to cross.

ETHEREUM - ETH/USD

COINBASE:ETHUSD, 1D 154.47 ▲ +2.11 (+1.38%) O:152.40 H:155.79 L:152.32 C:154.47

Ethereum plummeted below the 20-day EMA on April 25 and re-entered the ascending channel. This is a negative sign, as it invalidates the breakout of the pattern. The 20-day EMA is sloping down and the RSI has dipped into the negative zone. This shows that the bears have the upper hand in the short-term.

Currently, the bulls are attempting to hold the 50-day SMA for the past five days. This is a small positive. However, if the price doesn't scale above the 20-day EMA within the next couple of days, the probability of a breakdown of the 50-day SMA increases. The next support on the downside is the trendline of the triangle. If this also gives way, a drop to \$100 is possible.

Conversely, if the bulls succeed in ascending the overhead resistance of \$160 once again, a rally to \$180, followed by a move to \$187.62 is likely. The digital currency will pick up momentum if it sustains above \$187.62. Hence, we retain the buy recommendation given in our previous analysis.

RIPPLE - XRP/USD

BITFINEX:XRPUSD, 1D 0.30589 ▼ -0.00123 (-0.4%) O:0.30678 H:0.30895 L:0.30527 C:0.30589

LITECOIN - LTC /USD

COINBASE:LTCUSD, 1D 68.10 ▲ +1.55 (+2.33%) O:66.55 H:69.00 L:66.55 C:68.10

Litecoin is currently in a pullback after facing profit booking at the overhead resistance of \$94.39. The price has broken down of both the moving averages, which is a negative sign.

The moving averages are on the verge of completing a bearish crossover and the RSI has dipped into the negative zone. This has turned the short-term trend in favour of the bears. There is a minor support at \$60, below which a fall to \$50 and below it to \$44 is probable.

Contrary to our assumption, if the bulls reverse direction from the current levels and breakout of both the moving averages, the cryptocurrency can move up to \$84.73 and above it to \$94.39. We shall wait for the price to stabilize or to close (UTC time frame) above \$95 before proposing a trade in it.

BECOME A CRYPTO MARKET EXPERT TRADE, INVEST AND PROFIT WITH EASE

CRYPTO COURSES

The Platinum Crypto Academy trading courses are comprehensive guides to Bitcoin and cryptocurrency trading and investing. Our courses cover everything from the basics of cryptocurrencies to the advanced trading strategies you'll need to succeed. Our 1-on-1 mentoring programmes ensure that you have access to truly professional trading knowledge, and learn all the skills necessary to be able to make cryptocurrencies a successful income stream.

Being etched into the Financial World for over 10 years, Platinum has provided trading education to 1,000's of individuals all over the globe, with offices in the UK, USA, Australia, and India. Making us well placed to help you become the next Cryptonaire!

The Platinum Crypto Academy is the first crucial step for anyone looking to enter and succeed in the world of digital currencies.

OUR PACKAGES INCLUDE:

The Platinum Foundation Programme

If you're looking to start your Crypto Journey, this is the perfect programme for you

The Platinum Masters Programme

This programme is designed for those who have already ventured into the crypto world, but are looking to improve their skills to enable themselves to make better decisions and more profitable choices.

The Platinum Cryptonaire Programme

This is the complete offering for individuals who want not only to become a successful trader, but a prolific investor in the crypto space.

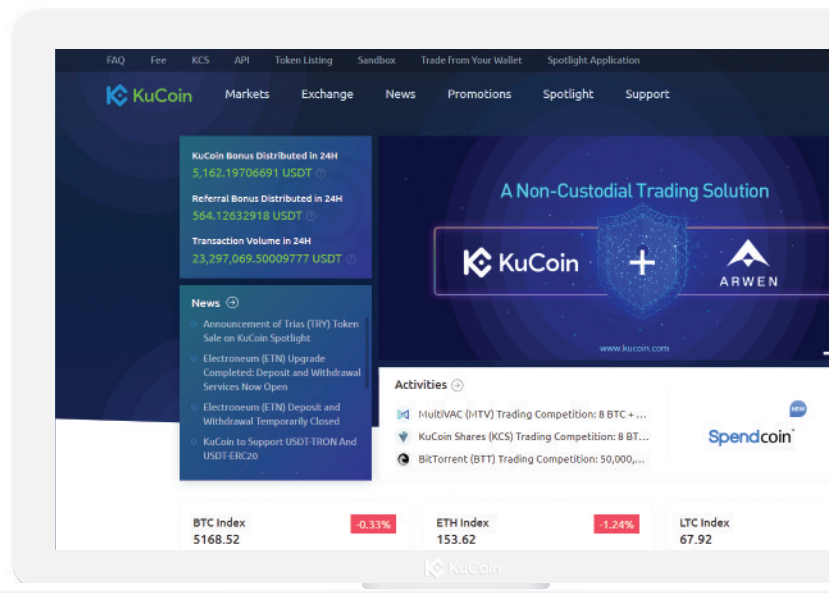

The People's Exchange

Launched in September 2017, KuCoin is a global cryptocurrency exchange for numerous digital assets.

It aims to provide users with a convenient and exceptionally secure trading experience.

KuCoin is often known for a wide range of tradable assets. It has now listed over 180 tokens including about 400 pairs.

As one of the most popular cryptocurrency exchange, KuCoin already has over 5 million registered users from 100 countries and regions.

[Trade on KuCoin Now](#)

KuCoin is the most advanced cryptocurrency exchange

Advanced KuCoin API

KuCoin's APIs are designed to offer an easy and efficient way to develop secure and programmatic trading strategy.

Various Order Types

KuCoin offers users a suite of order types to give traders the tools they need for every scenario, e.g Limit, Stop, Post Only, etc.

Reliable Security Solutions

Multiple security mechanisms to protect user information and funds are our first priority, e.g SMS authentication and device trust system.

Lower Maker Fees

Attractive to the most powerful trading makers, creating high liquidity while also saving trade costs and improving trade efficiency.

Excellent Customer Support

Our support team is available 24 hours a day to assist you with any issues or questions you may have.

Efficient Notification Module

The KuCoin Websocket feed, newly added App and SMS push notifications let you easily gain access to real-time market data.

Advancements in the Cryptocurrency World

24 Countries and IMF Discuss Global Standards of Crypto Regulation

Twenty-four financial authorities and 11 international organizations, including the International Monetary Fund and the World Bank, recently gathered in New York and discussed global standards of crypto regulation. "It is important to consistently implement international standards," said the chairman of South Korea's top financial regulator who attended the meeting.

Financial Authorities Discuss Crypto Regulation

The Financial Stability Board (FSB) Plenary met at the Federal Reserve Bank of New York Friday to discuss "vulnerabilities in the global financial system" and the progress report to be delivered to the upcoming G20 meetings in Japan. Among the topics of discussion was global standards of crypto regulation.

"The plenary discussed the different initiatives underway at standard-setting bodies to address risks from crypto-assets and any possible gaps in this work," the FSB detailed. The Board added that its work on crypto assets has focused on two areas: monitoring of the financial stability implications and a directory of crypto asset regulators. Promising that it will publish an update on *"the work of the standard-setting bodies and will deliver it to the June meeting of G20 Finance Ministers and Central Bank Governors,"* the Board elaborated:

"Members took note of the continued rapid evolution of crypto-asset markets and the need for continued monitoring of developments... the FSB is exploring financial stability, regulatory and governance implications of decentralised financial technologies."

Nike, Telegram, Facebook, and Everyone Else Suddenly Love Blockchain

Nike is launching a blockchain product. Telegram is launching a blockchain. Samsung is reportedly planning to launch its own token platform; building with Ethereum for the S10 wasn't enough. Facebook is getting into blockchain. Google still hasn't done much with it, but JP Morgan now uses it. The list of major corporate names edging in on the crypto space is staggeringly long. Should we be excited or turned off?

BIG DEAL OR NAH?

For one thing, the development of all these new tokenized platforms is a lot of money. I'm not going to make a maximalist argument about how there should be only one smart contract platform in the form of Ethereum or Tron or EOS, but I will say that these projects are preferable over projects that are controlled by a single entity, like the Telegram Open Network, or whatever the hell Facebook is building. We want more transparency and openness in the space. We want more decentralization and empowerment of individuals. Now, these big players are coming around and, instead of getting in line with the mentality and at times grandiose vision of the crypto movement, they're bringing all their old-world detritus with them.

Regular corporations developing blockchain applications will spend billions of dollars. Why not spend it in ways that help the whole world, like developing on existing platforms, or at least making inter-operable products? With Ethereum, for example, it's possible to launch a token platform without starting a whole new blockchain. Wouldn't we prefer if companies like Telegram and Samsung just did that?

IOTA Revved Up On Jaguar Land Rover Partnership, Pumps 18%

Big partnership announcements have been thin on the ground for the major crypto projects for the duration of the bear market. That trend changed for IOTA today when the UK's largest automobile manufacturer announced that it would be offering cryptocurrency rewards to drivers for data sharing.

IOTA Driven Up

MIOTA markets reacted pretty quickly when the news articles started doing the rounds. From a 24 hour low of \$0.261 IOTA surged over 18 percent to reach \$0.310 according to coinmarketcap.com. Daily trade volume almost tripled to just over \$30 billion during Asian trading this morning. Binance is currently getting most of that volume with a 40% share, primarily in BTC.

Along with the rest of the crypto markets IOTA hit a low point in mid-December of around \$0.20 and it hasn't really recovered much from that. This partnership announcement has revived the Internet of Things based altcoin which is currently one of the top performing ones in a generally flat crypto market.

According Reuters Jaguar Land Rover has begun testing software that will use a 'smart wallet' to collect crypto which has been awarded to drivers who share their data. The report added that automatic data collection for road conditions and traffic volumes could be shared with authorities and navigation providers. Drivers that consent to this will earn some IOTA which can be used to pay parking, road tolls or charging for electric cars.

Washington State signs bill recognizing blockchain technology into law

On Apr. 26th, Washington State Governor Jay Inslee signed SB 5638—an act “recognizing the validity of distributed ledger technology”—into law. The Act encourages the development of blockchain, recognizes its use in commerce and digital signatures, and amends legislation to provide definitions for the technology.

The original purpose of the Washington Electronic Authentication Act was to stimulate the use of “reliable electronic messages” in State commerce and ensure that “electronic signatures are not denied legal recognition.” Rather than encumbering businesses with outdated business requirements, such as the use of paper signatures, the Act encouraged businesses to leverage technology to streamline commerce.

The newly passed blockchain bill would expand the Electronic Authentication Act to include “encouraging the development of distributed ledger technology” to the legislation.

The Act also adds definitions for blockchain and distributed ledger technology to State law. For more details on the changes introduced by the bill

Russia Initiates Regulatory Sandboxes to Test Crypto, Blockchain Technology and Others

Russia supposedly lacks regulations when it comes different technological advancements including the likes of, *“neuro- and quantum technologies, artificial intelligence, robotics, virtual and augmented reality [...] and crypto and blockchain technologies,”* reports

The problem that stems from this is that firms specializing in said fields are not able to introduce innovative projects – pushing Russia far back in competition compared to other countries.

For these reasons, Russia has decided to launch projects within each sector of technology in four different parts of the country, namely, Kaluga Oblast, Kaliningrad Oblast, Izvestia and Moscow. The news was first announced by the country’s Deputy Minister of Economic Development, Savva Shipov, who was quoted by News.Bitcoin.com.

As for the structure of the regulatory framework that will eventually be imposed, it has been noted that a similar approach will be taken to that of other countries that have already implemented rules. This will supposedly prevent legal risks for businesses, while being time and cost-efficient – that way innovative ideas will come flowing in.

As per the Russian President’s Advisor, Kirill Kabanov, regulatory sandboxes are essential in understanding technology, especially for countries that have yet to impose regulations. In particular, he said:

“Regulatory sandboxes will be effective if they are used as test grounds for norms that can later be applied to adapt the legal environment to the new technological structure.”

A Glimpse of Banking's Future, Live on the Ethereum Blockchain

At first glance, this week's move by the investment bank Societe Generale to issue a security token-like bond in which it was both the issuer and the sole investor might seem like a pointless act. Not so much a peer-to-peer transaction; just a peer transaction.

But one element of the announcement suggests this was actually an important step in financial institutions' sometimes fractious relationship with cryptocurrencies and blockchain technology. You see, Societe Generale's \$112 million bond issue used smart contracts built not a private, permissioned blockchain but on the public, permissionless ethereum blockchain.

This was a baby step, for sure. But, let's remember that this French bank belongs to an industry whose member institutions repeatedly posit that permissionless blockchains are unworkable for them.

Banks have made various arguments for why they feel compelled to use private, permissioned versions of this technology: because they are beholden to know-your-customer and other compliance rules that aren't easily enforced in a permissionless environment; because their competitive interests require a level of privacy that can't be assured in a transparent, public setting; or because public blockchain's probability-based standard for confirming trade settlement falls short of what Wall Street's lawyers call "settlement finality."

Yet here was the 19th-largest bank in the world experimenting with the public model.

Chinese Government Supports Development of 'Blockchain City' in Malaysia

The Chinese government is purportedly supporting the construction of a "blockchain city" in the critical shipping lane of the Malaysian Malacca Strait. The development was announced in a press release shared with Cointelegraph on April 26.

Construction and engineering company China Wuyi and investment network SWT International Sdn Bhd have jointly launched the Chinese government-backed project aimed at the development of the city of Malacca into a blockchain city called Melaka Straits city. The founders of the project are planning to raise 500 Malaysian Ringgits (\$120 million) during the initial stage.

Per the release, the entire infrastructure of the city will be based on blockchain technology, with a so called DMI platform offering its native DMI coin. DMI will be used to pay government-based services within the city and feature an exchange that will enable Melaka Straits City tourists to exchange their fiat currencies for DMI coins.

The project CEO Lim Keng Kai said that *"our company is using cutting-edge blockchain technologies and integrating those into the traditional industry to make Malaysia a world-class tourist destination. We have the government approval to remediate this land and came up with some great plans for the area."*

China has been expanding its presence in the Pacific region through investments in infrastructure and municipalities. Over the past seven years, China reportedly poured \$6 billion in concessional loans and other aid into resource-rich Papua New Guinea's Port Moresby, being eager to exploit its natural gas, minerals and timber resources.

Survey Shows Europeans Think Crypto Will Last a Decade

According to a recent survey of 10,000 European residents, 63% believe that cryptocurrencies will still be around in 10 years. However, polled respondents were not so confident about bitcoin core (BTC) lasting over the next decade as only 49% of participants believe BTC will be around.

63% of 10,000 Polled Europeans Believe Cryptocurrencies Will Still Exist in 10 Years

Japanese cryptocurrency exchange Bitflyer was recently licensed to operate in the European Union, and on April 24 the company's European arm published a poll of 10,000 residents from various countries to find out how popular digital currencies are today. The survey was sent to residents from Norway, France, Belgium, Germany, and other regions while the researchers also parsed the responses by country. The biggest question on the survey asked participants if they believe cryptocurrencies will still exist in 10 years. Out of the entire lot of respondents, 63% think cryptos will still be around within the next decade.

Residents from Norway seem extremely positive as 73% believe that digital currencies will continue to trend in the future. This is followed by those in Italy, the Netherlands, Poland, Spain, Denmark, and Germany who voted above the 60th percentile. Respondents from Belgium, the U.K., and France showed stronger pessimism (59% or lower) toward cryptocurrencies lasting over the next 10 years. Andy Bryant, COO of Bitflyer Europe, said the poll results indicate that people are looking past the prior cryptocurrency hype and digital assets have become more established.

Major exchange eTrade reportedly integrating Bitcoin and Ethereum for 5 million users

According to the New York Times journalist Nathaniel Popper, eTrade, a US-based major financial assets and stocks exchange, is preparing to integrate bitcoin and ethereum for 5 million users.

"In the wake of TD Ameritrade quietly opening Bitcoin trading for some of its customers, I was just told that eTrade is preparing to begin offering both Bitcoin and Ether trading to its 5 million or so customers and is just finalizing a third party to actually hold the coins," Popper reported.

The consideration of listing crypto assets by eTrade follows a report by The Block which found that TD Ameritrade, a leading brokerage in the US, is experimenting with ErisX's new crypto exchange to potentially offer cryptocurrency trading services to its 11 million users.

"Testing is a best-practice necessary for us and our customers as we build the most robust and transparent marketplace for digital assets," a spokeswoman for ErisX reportedly told The Block.

Better Liquidity for Bitcoin and Ethereum

Throughout the past decade, the crypto market has been plagued with fake and inflated volumes. Many major markets like South Korea are still struggling to deal with inflated numbers designed to provide exchanges with higher rankings on market data platforms such as CoinMarketCap for visibility.

A Bitwise presentation to the US Securities and Exchange Commission (SEC) revealed that around 95 percent of the volume in the cryptocurrency market is either fake or inflated, with only ten cryptocurrency exchanges recording real volume above \$1 million.

Tobacco Giant Philip Morris Is Building a Different Kind of 'Public' Blockchain

Tobacco giant Philip Morris International is working on a “public blockchain,” an executive said, though not quite in the commonly understood sense of the term.

“We want to do public blockchains,” Nitin Manoharan, Philip Morris’ global head of architecture and tech innovation, said onstage Thursday at the London Blockchain Expo.

Specifically, the New York-based multi-national company would use this technology to track tax stamps on cigarette boxes, Manoharan said. While that may sound prosaic, he said these bits of paper are valuable (worth about \$5.50 per packet), manually dealt with and easily counterfeited (generally fraudsters use a high-resolution photocopier), costing the industry and governments \$100 million a year.

Manoharan estimated that Philip Morris alone could save \$20 million off the bat by automating processes and reducing fraud with the traceability and transparency afforded by a blockchain.

And while most enterprise blockchains are permissioned, meaning only approved parties are allowed to participate, the one Philip Morris envisions in this instance would be widely accessible. After his panel discussion, Manoharan told CoinDesk:

“The aspiration is an industry-wide blockchain that interested stakeholders can come in and subscribe to it and benefit from it. If they see no value they can just leave.”

When asked specifically if that meant anyone could run a node without permission, he said yes, acknowledging they would need an incentive to do so.

“We want to make sure that the minimum viable ecosystem we put in place is attractive to all the stakeholders who participate in this particular ecosystem,” he said. “So there needs to be a value proposition, there needs to be a reason for taking part. Because if there’s not sufficient value on the table they will not engage. So the only way to make it sustainable is to ensure stakeholders benefit from this blockchain.”

Corporate purpose and business model

1irstcoin LLC operates one of the fastest, safest and most innovative trading sites for cryptocurrencies in the world. They also operate the connected financial instruments as a licensed financial service provider. It has long stopped being a secret that Blockchain, with its diverse applications, is about to sustainably change our global interaction; and that it already has changed it in many areas.

1irstcoin makes the difference

Everyone who deals-, trade and work with cryptocurrencies knows the problem:

- To get the best price for your cryptocurrency, either blindly trust your broker, or you make the effort and keep an account on many exchanges
- In most cases, transfer between accounts is necessary to get the best price. Such a transfer also costs extra money

1irstcoin solves the entire problem with his algorithm. By connecting and implementing the order books of the leading crypto exchanges, the customer of 1irstcoin LLC always receives the best price for their cryptocurrencies with just one account. Guaranteed, in nano seconds, our algorithm scans the market and always offers the best deal. The fees are on average very low at 0.825% of the transaction volume for this service. Owners of at least 1000 1irst, FST, tokens, receive a 50% discount on all fees.

Note at all: All profits of 1irstcoin LLC are distributed to the owners of the FST token once a year. For this purpose, special repurchase programs are being developed above the market value.

The 1irst token, (short FST)

- 100,000,000 Token total (max supply)
- ERC 20 Standard
- CMC (Coimmarketcap.com) listed
- Coingecko.com listed
- Listed on several exchanges

The 1irst token is not an empty promise or a bad bet on the future. No, the token is secured and backed by the value of the company. There is no comparable investment with such big impulses and opportunities. Well-known investors, such as the Kritzer family from Germany, who have already developed and built up global market leaders such as Roundliner GmbH, have been on board since the second capital round and have set this unique combination as a bet on a secure future. The fst token is the ideal portfolio addition. the token has been able to generate more than 130% return on invest since its launch. Not in a year, no, since its listing on coinmarketcap.com in march 2019. The FST token will be available promptly from leading crypto currency exchanges according to cmc ranking. For this purpose, a cooperation with Star Alliance was entered in April 2019.

Next steps in the development

Due to the possibilities given to us with the financial license, we will develop, control and launch further products for the krypto finance world. One project is already at a very advanced stage. The project is called "1stgold.com", based on our name and the project is 100% owned by 1stcoin LLC and will continue to be operated by ourself.

In essence, this project is easy to describe. The 1stgold token will embody one gram of gold in physical form and is physically backed by that amount of gold. The incredible will be the associated service. Customers will be able to purchase these tokens OTC (over the counter) against FIAT currency. The customer no longer requires extensive storage and can exchange his tokens for "physical gold" or cryptocurrencies, or FIAT currencies at any time. For this purpose, we cooperate with leading gold dealers in Germany, Switzerland and Austria. Boundless and anonymous. A physical gold shipment takes place upon return of the tokens. The customer can also personally pick up his physical gold from affiliated merchants.

A global service in the trading of gold is intended by us. No more and no less. The project is already in its pre-launch phase and has already cost more than \$ 670,000 in investment. We are convinced that this project can become a unicorn and we are proud that this project belongs to the portfolio of 1stcoin LLC.

In addition to the 1stgold project, there are already two further projects in planning and implementation.

Coindex: This utility token is comparable to the 1stgold token in the matter. Instead of being deposited with physical gold, this token will be linked to a basket of international equities which will be deposited centrally in a custody account. This allows global access to lucrative investment opportunities for every person. At the moment it is necessary to have a depot and an account to buy a tesla or google share. In addition, you can not currently purchase these shares with crypto currencies. these problems will be solved by coindex token globally. Tradable 7 days a week and 365 days a year.

The invested capital is available at any time and at any place. Coindex will write history, we are sure of that.

In addition to these projects, we are currently developing a so-called stable token, based on the US tether, but on a Euro basis. This token is intended to facilitate payments for affiliated companies and individuals. Already there are more than 100 requests for cooperation at this level. The FSCO (1stStableCOin) is especially designed to support entrepreneurs and traders in their import and export activities. The FSCO can be exchanged in every FIAT, as well as in BTC and ETH on our stock exchange. The reference is 1: 1 on the euro. Low transaction costs of less than 0.10% appeal especially to commercial traders.

Closing words

With 1irstcoin we want to close a gap in the crypto currency market. There are already many stock exchanges that are doing a good job, but there is no place that unites these good jobs. That's why we look a bit like google for the crypto industry. On the contrary, we do not bother anyone, on the contrary, the stock markets profit through us, just as the traders advertise on google. On top of that, we give our clients a clear arbitrage advantage, which otherwise was reserved only for professionals. Whether as a customer of our crypto currency exchange, or as the owner of our token, with us you are setting the future. Nobody will doubt that sooner or later cash and the associated fiat currencies will disappear from the planet. Just like the dinosaurs, only faster. The blockchain makes everything more transparent, safer and faster and we are a part of it.

Thank you for your attention
