Despite the slight downturn, the institutional adoption of Bitcoin continues to increase. Filings with the United States Securities and Exchange Commission show that four wealth management firms have bought shares in Grayscale's Bitcoin Investment Trust.

A survey of about 42,000 people in 27 countries by product comparison website Finder showed a high adoption rate in Asia. Among the countries polled, Vietnam had the highest adoption rate at 41%, while India and Indonesia had a 30% adoption rate.

Bitcoin will take a big leap on Tuesday as it becomes legal tender in El Salvador. With this step, Salvadorans will be able to use Bitcoin for buying goods and services and also pay for taxes. Ahead of its Tuesday deadline, President Nayib Bukele tweeted that El Salvador had purchased 400 Bitcoin.

Bitcoin bounced off the 20-day exponential moving average (EMA) on September 1, indicating strong buying by the bulls on dips.

The buyers continued their momentum and pushed the price above the 61.8% Fibonacci retracement level at £36,834.35 on September 5. If bulls sustain the price above this level, the BTC/GBP pair could continue its journey toward £42,650. Although the upsloping moving averages favor the bulls, the negative divergence on the relative strength index (RSI) indicates that the bullish momentum may be slowing down.

Lastly please check out the advancement's happening in the cryptocurrency world. Enjoy the issue!

WEEKLY CRYPTOCURRENCY MARKET ANALYSIS

Hello, welcome to this week's 198th edition of Cryptonaire Weekly Magazine. The global crypto market cap is \$2.37 Trillion, up \$360 billion since the last week. The total crypto market trading volume over the last 24 hours has increased by 18.24% to \$142.66 Billion.

The DeFi volume is \$19.93 Billion, 13.97% of the entire crypto market's 24-hour trading volume. The volume of all stable coins is \$109.92 Billion, 77.05% of the total crypto market's 24-hour trading volume.

Bitcoin will take a big leap on Tuesday as it becomes legal tender in El Salvador. With this step, Salvadorans will be able to use Bitcoin for buying goods and services and also pay for taxes. Ahead of its Tuesday deadline, President Nayib Bukele tweeted that El Salvador had purchased 400 Bitcoin.

This step by the Central American nation has grabbed the attention of both crypto enthusiasts and monetary policy experts. Back home, the citizens are wary of the new law to make Bitcoin the official currency alongside the US dollar. In a recent survey conducted by Central American University's Institute of Public Opinion, 70% of the respondents believed that the law to make Bitcoin the legal tender should be withdrawn.

Meanwhile, several legacy finance companies have been adding support to cryptocurrencies. Union Investment, a \$500 billion asset manager, told Bloomberg that it is planning to add Bitcoin to a small number of investment funds as part of a pilot program for private investors.

Franklin Templeton, with more than \$1.4 trillion in assets under management, has posted job openings for its crypto trading and research departments. In the September crypto outlook, Bloomberg's senior commodity strategist Mike McGlone, said Bitcoin and Ether are on target to reach \$100,000 and \$5,000 respectively.

However, JPMorgan analysts believe the crypto markets are looking frothy after the sharp rally in altcoins. The analysts said the share of altcoin trading in the total crypto markets rose from 22% at the beginning of August to 33%.

"The share of altcoins looks rather elevated by historical standards and in our opinion it is more likely to be a reflection of froth and retail investor 'mania' rather than a reflection of a structural uptrend," the analysts' added per Markets Insider.

Percentage of Total Market Capitalization (Dominance)

Bitcoin	41.75%
Ethereum	19.43%
Cardano	3.80%
Binance Coin	3.52%
Tether	2.85%
XRP	2.69%
Solana	2.27%
Dogecoin	1.69%
Polkadot	1.47%
USD Coin	1.18%
Others	19.34%

beatbind

BeatBind connects musicians, venues, event organizers and fans to create the most memorable musicevents on Earth.

WHITEPAPER

PITCH DECK

The Problem

Organizing an event of any size remains a slow and manual process, with high cost and connection barriers

- ➔ Quality performers or venues are hard to reach
- ➔ Lack of connections limits rising artists and new venues
- ➔ Agencies and middlemen are slow, inflexible, and expensive

The Solution: BeatBidder

World's first event organization & talent auction platform that lets artists and venues focus only on serving unforgettable experiences to their fanbase

- ➔ Music groups - let venues & organizers bid on you, **increasing your revenue**
- ➔ Event organizers - let musicians bid on your opportunity, **so you lower your expenses, and get the best**
- ➔ Venue owners - **outsource event organization** to the most passionate managers

COMING SOON

BeatBind AI

Providing revenue projections and other heuristics that helps all platform users to decide whom to hire, where to perform, etc. Our platform will use machine learning to produce revenue estimations to help you justify decisions in any part of the music event organization process. This will greatly reduce risk and spur even more growth. We believe this is just the step the industry needs to take to step out of the dark caused by the lack of data, and make better decisions.

CRYPTO TRADE OPPORTUNITIES

BITCOIN - BTC/GBP

Bitcoin bounced off the 20-day exponential moving average (EMA) on September 1, indicating strong buying by the bulls on dips.

The buyers continued their momentum and pushed the price above the 61.8% Fibonacci retracement level at £36,834.35 on September 5. If bulls sustain the price above this level, the BTC/GBP pair could continue its journey toward £42,650.

Although the upsloping moving averages favor the bulls, the negative divergence on the relative strength index (RSI) indicates that the bullish momentum may be slowing down.

The first sign of weakness will be if bears pull the price below the 20-day EMA. If that happens, several short-term traders may book profits, dragging the pair down to the 50-day simple moving average (SMA).

[Previous Analysis...](#)

ETHEREUM - ETH/GBP

Ether rebounded off the 20-day EMA on August 31 and soared above the overhead resistance zone at £2,400 to £2,466. This signalled the resumption of the uptrend.

The upsloping moving averages indicate advantage to the bears but the negative divergence on the RSI warns of a possible correction or consolidation. The ETH/GBP pair is facing resistance in the £2,900 to £3,098.17 overhead zone.

However, the bulls have not given up much ground in the past three days, suggesting that traders are not rushing to the exit. The pair is likely to find strong support at £2,682.43 and then again at the 20-day EMA.

A strong rebound off either level will suggest that bulls are accumulating on dips. That will increase the possibility of a retest of the all-time high. Alternatively, a break and close below the 20-day EMA will be the first sign that bulls are tiring out.

[Previous Analysis...](#)

RIPPLE - XRP/GBP

The bulls successfully defended the 20-day EMA on August 30, which may have attracted buying on August 31. After hesitating near £0.938 for a few days, the buyers finally scaled this resistance on September 6.

If bulls sustain the price above £0.938, the XRP/GBP pair could rally to the overhead zone of £1.20 to £1.4319.

However, the bears are unlikely to give up easily. They will try to pull the price back below the breakout level of £0.938. If that happens, the pair could drop to the 20-day EMA.

If the price bounces off this level, the bulls will again try to resume the uptrend. But if the pair dips below the 20-day EMA, it will suggest that supply exceeds demand. That could open the doors for a decline to the 50-day SMA.

[Previous Analysis...](#)

CARDANO - ADA/GBP

The bulls pushed Cardano above £2.16173 on September 2 and 3 but could not sustain the higher levels. This suggests that bears are defending the overhead resistance aggressively.

The bears will now try to pull the price down to the 20-day EMA. This is an important support to watch out for.

If the price rebounds off this support with strength, it will suggest the sentiment remains positive and bulls are accumulating on dips. The buyers will then make one

more attempt to resume the uptrend. The target objective on the upside is £2.50.

On the contrary, if bears pull the price below the 20-day EMA, the ADA/GBP pair could drop to the breakout level at £1.75137. A bounce off this level could keep the pair range-bound for a few days while a break below it may start a deeper correction.

[Previous Analysis...](#)

BINANCE - BNB/GBP

Binance Coin bounced off the 20-day EMA on August 31 but the bulls have not been able to drive the price above the overhead resistance at £377. This suggests that buying dries up at higher levels.

But if the price slips below £305.40, it will indicate that bulls are losing their grip. The pair may then drop to the 50-day SMA.

[Previous Analysis...](#)

The BNB/GBP pair could now drop to the 20-day EMA. A break below this support could pull the price down to the breakout level of £305.40. If this support holds, the pair could consolidate between £305.40 and £377 for a few days.

Conversely, if the price rebounds off the 20-day EMA, the bulls will try to propel the pair above £377. If they succeed, it will indicate the start of the next leg of the uptrend. The pair could then rally to £400 and later to £475.

INSURACE.IO

THE FIRST MULTI-CHAIN INSURANCE PROTOCOL TO LAUNCH ETHEREUM, BINANCE SMART CHAIN, AND POLYGON

Decentralized Finance (DeFi) aims to offer financial services by leveraging decentralized technologies, mainly public blockchain networks, openly and transparently with universal accessibility. It has been at the forefront since 2019 and exploded in 2020. With the advent of DeFi, cyber security issues pose a significant threat to DeFi ecosystem. The more demand for DeFi Insurance has led to the development of insurance protocols in the market.

ABOUT DEFI INSURANCE

DeFi insurance is the protection of funds locked in DeFi protocols against hacks and bugs in smart contracts. In the future, this will extend to wallet insurance, market volatility, rug pulls, NFT insurance, cross-chain bridge insurance, and other products.

ABOUT INSURACE.IO

InsurAce.io is a leading decentralized insurance protocol, providing reliable, robust, and secure DeFi insurance services. InsurAce.io offers portfolio-based insurance products with optimized pricing models to substantially lower the cost of insurance. It also contains investment functions with underwriting mining programs to create sustainable returns for the participants and provide coverage for cross-chain DeFi projects to benefit the whole DeFi ecosystem.

InsurAce.io plans to expand the product accessibility to a wider audience by removing the “Know your client” process as seen in the centralized space making it easier for all participants.

The participants can earn InsurAce Token (INSUR)

by staking in the liquidity pool using ETH, DAI, USDT, and/or other eligible tokens. This leads to a drastic increase in the capital pool, cover capacity, investable capital, and further reduces the insurance premium. This capital pool is managed with rigorous risk control models to dynamically adjust the Solvency Capital Requirement (SCR) and use the secured free capital for investment in yield farming on audited protocols, staking with lending platforms, staking in DEX such as Uniswap.

Backed by DeFiance Capital, Parafi Capital, Alameda Research, Hashkey group, Huobi DeFiLabs, Hashed, IOSG, Signum Capital and a dozen of other top funds it provides coverage to 60+ DeFi protocols across 8 chains, safeguarding over \$50M assets as of 30th August 2021.

With launches planned on Solana, HECO, Fantom, Avalanche, Elrond, and more ecosystems, InsurAce.io plans to provide insurance services across multiple chains. It has already partnered with Alpha Finance Lab, mStable, Autofarm, Bella, Dora Factory, 88mph, dHEDGE, Huobi Global, and many more.

INSUR TOKEN

InsurAce.io token INSUR is a standard ERC20 token, which incentivizes the participants retroactively. It is available on Ethereum, BSC and MATIC blockchains and is listed on exchanges such as Huobi Global, DeBank, DeFi Lama, Messari Bitcoin.com, Uniswap, Etherscan, Sushiswap and Pancake Swap. More details on the token can be found on <https://www.insurace.io/market>

Why do we believe INSUR to be undervalued right now? InsurAce.io is an active project with regular updates and developments leading to project improvement. Overall the DeFi insurance space is largely undervalued, with less than 2% of the \$90bn Total Value Locked (TVL) of DeFi projects covered as of now, and the only way to mitigate risk and vulnerabilities of smart contracts are DeFi insurance projects.

THE TEAM BEHIND INSURANCE.IO

The InsurAce.io team is a high-profile, professional team with a strong experience and network throughout the crypto and DeFi space. Mostly based out of Singapore, with other key team members present in the Americas, Russia, and Asia.

InsurAce.io is lead by Oliver Xie. With years of experience in research crypto derivatives and blockchain technology, Oliver has moved towards the open finance space in September 2020 leading [InsurAce.io](https://www.insurace.io).

Sum Wei, CTO, has 10+ years of experience with IBM

and Microsoft as a security expert and blockchain technology research lead.

Dan Thomson, with experience launching and growing international businesses for over 15 years, leads the Marketing and Business Development division.

If you're interested in following the InsurAce.io journey a little closer you can visit <https://www.insurace.io/>, or for other links to the InsurAce community, you can visit linktr.ee/insurace Discussing the InsurAce.io Project, CEO [Platinum Crypto Academy](#) Mr. [Karnav Shah](#) noted: “ It’s exciting to come across a project that explores wider utilities of the blockchain technology by advocating the practice of freeing up the limitations and bringing about better capital utilization. We are eager to share the InsurAce.io project and explain its fundamentals to our readers. InsurAce.io is a leading decentralized multi-chain insurance protocol, providing reliable, robust and secure insurance services to DeFi users, allowing them to secure their investment funds against various risks. We are certain that we will have more about this promising venture in our subsequent publications.”

ADVANCEMENTS IN THE CRYPTOCURRENCY WORLD

SOLANA HITS ALL-TIME HIGH AS COIN RISES 14% IN 24H

Some people are starting to call this season "Solana Summer."

Solana (SOL) has hit yet another all-time high.

The price of the cryptocurrency is now \$157. The 24-hour increase of 14.71% makes the coin the seventh-largest cryptocurrency with a market cap of \$45.8 billion.

The remarkable rise is a 70,632% increase compared to a year and a half ago when Solana had just launched and the market hadn't yet appreciated its worth.

Solana, developed by former Qualcomm employees, promises a raft of innovations that lower transaction times, increase capacity and decrease costs to a fraction of a penny per transaction.

Chief among these is proof-of-history, a novel consensus algorithm that verifies transactions by using a cryptographic clock to logically deduce whether someone is able to fund it.

Solana's rise comes at a time when the market is desperate for a smart contract-enabled blockchain that offers high throughputs at a low cost. Ethereum, its main competitor, is fit to burst; a hotly-awaited upgrade is taking a long time and transactions can cost hundreds of dollars.

BEATBIND IRONING OUT MUSIC INDUSTRY'S BIGGEST BLOCKERS WITH BLOCKCHAIN

Meet Beatbind

Crypto for the music industry is an upcoming concept, and one that is being widely appreciated by those searching for innovative crypto projects. This is where new crypto tokens such as Beatbind come into the picture. Beatbind is essentially an ERC20 utility token that caters to the musical events industry. The platform offers a truly worldwide, trustless and affordable method of payment in the form of the BBND or Beatbind tokens.

All the transactions on the Beatbind platform are performed through the BBND utility token. Beatbind is one of the most innovative crypto projects, which intends to unify the payment processes in musical events. Hence, there is no longer the need to have physical cards, chips, and different traditional currencies for all the parties and festivals. Beatbind understands that there is no way of cashing these back or using them outside of the events. This is one of the prominent reasons why Beatbind is looking to transform the music industry and has planned to introduce a universal payment system through the BBND or Beatbind tokens. Apart from this, Beatbind will also accept fiat payments through the Beatbind platform.

IN THIS BEATBIND REVIEW, FIND OUT HOW THE COMPANY IS IRONING OUT THE MUSIC INDUSTRY'S BIGGEST BLOCKERS USING BLOCKCHAIN. UNDERSTANDING THE BIGGEST BLOCKERS IN THE MUSIC INDUSTRY

Beatbind is one of those innovative crypto projects

that combines the best of technologies to ensure excellent performance as well as flexibility for its ecosystem. Beatbind plans to implement BBND as the ERC20 token on the ETH blockchain system. Additionally, other smart contracts required for the function of Beatbind shall also be implemented on the ETH network and would further enjoy the security of Beatbind's blockchain.

The Beatbind ecosystem ensures that every transaction on its platform is secure, transparent, and immutable. As a result, every transaction on the Beatbind platform will be browsable, open, as well as verified. This happens via the Beatbind transaction explorer.

As far as the music industry is concerned, it is currently dealing with several problems. For instance, the usual practice in other segments or industries is missing within the musical events industry. Even though the music industry recorded a worldwide revenue figure of \$30 billion, it is estimated to grow 10% every year in the days to come. However, despite this popularity and growth, the music events industry has to deal with manual and slow negotiations. The music event organisers often come across forgers and ticket scalpers who steal nearly half the revenue. There is no clarity as far as data is concerned within the music industry. As a result, fans feel ignored, powerless, and less engaged. The artists and venues are restricted in several ways in which they can connect. On the other hand, ticket forgers and scalpers are earning the same amount as the organisers and artists

who design the events, resulting in a loss of value amounting to \$8 billion every year. Also, the event organisers have no access to any empirical data related to their fans' trends, wishes, and preferences, making the event highly risky. The fans, on the other hand, do not witness any event-driven engagements like socialising, dating, voting, surveying, etc.

In addition to the above problems, several others remain unaddressed, and it is here that Beatbind comes into the picture. Beatbind attempts to streamline and digitalise the music-organising process ever since the nightlife system/culture came into existence. Beatbind aims to connect three main players within the music events industry, including performers, fans, and venue owners. Beatbind's unique solution shall be supported through BBND, which will function as innovative crypto for the music industry.

The music events industry has until now been dealing with haphazardly organised events, as well as limited opportunities. However, with the advent of Beatbind, the entire musical events ecosystem has undergone a massive transformation.

WHAT ARE BEATBIND'S SOLUTIONS?

Beatbind is one of those innovative crypto projects that are unique and tailored to meet the needs of the music events industry. For instance, if you are a disc jockey and searching for the best offers for a music events performance, then you will get the option to choose from multiple venues. Thus, DJs can display their portfolio and select when they are available for shows and allow event organisers to outbid one another while they get some of the best offers.

With Beatbind, all the parties within the musical events industry benefit in different ways. While music groups let organisers and venues bid on them, thereby increasing their revenue, the event organisers allow musicians to bid on their opportunity, thereby lowering their expenses. On the other hand, the venue owners can outsource their music event organisation to those passionate about managing them.

AS FAR AS FANS ARE CONCERNED, THEY BENEFIT FROM THE BEATBIND PLATFORM IN THE FOLLOWING WAYS:

- Seamless ticketing option for all Beatbind events.
- Accessing tickets to all Beatbind events directly.
- Transparency in pricing, zero chances of

forgery, fraud, and ticket scalping.

- Fans get the option to return event tickets and get a refund.
- Seamless opportunities for crowdfunding for all Beatbind events.
- Fans get to pre-purchase tickets as and when an event is held.

Beatbind's advanced ticketing system supports buying a ticket for all the events being organised currently. This allows organisers to collect initial capital. This innovative seamless crowdfunding provides smaller venues with a way to invite big stars. Besides, all the money gets refunded if the event gets cancelled or doesn't materialise.

A BRIEF OVERVIEW OF BEATBIND PRODUCTS

As already stated above, Beatbind is one of the leading platforms specially curated for the music event industry. Beatbind has designed a multi-level business that helps to tackle the numerous issues prevailing in the music industry.

FOLLOWING ARE THE DIFFERENT LEVELS OFFERED BY BEATBIND:

1. **BeatBidder:** The BeatBidder platform connects venues, DJs, as well as other parties that form a part of the musical event organising process. The ecosystem connects artists, DJs, venue owners, as well as others involved in the music events organisation process to offer the best opportunities to all. BeatBidder leverages an auction system to boost revenue for high in-demand disc jockeys, as well as venues. On the other hand, the market size reduces costs as well as lowers barriers to entry for everyone participating in the creation of music events. Beatbind also takes sponsorships, event organisation, and promotions outsourcing among those services that can be exchanged on its platform.

2. **BeatBuy:** Beatbind ensures that ticketing is a default aspect of any music event designed on its platform. These tickets will be sold directly through BeatBuy and offered to Beatbind's fan base, thereby reducing entry barriers. This helps prevent ticket scalping, instances of forgery, as well as the rising secondary markets that steal nearly \$8 billion on an annual basis from the event creators. BeatBuy shall eliminate this issue and ensure that all the money goes back into the pockets of organisers, artists, and businesses that design the experiences.

3. BeatX: The BeatX app gives fans all the impact that they require for shaping the event that they are attending, along with event-driven experiences, such as dating. Fans are thus able to access all the newsfeeds and also engage in different ways that further help organisers to better design the events that those very fans are planning to attend. To ensure that all transactions are authentic and further safeguard different parties, Beatbind intends to launch an escrow protocol that refunds money when transactions fail or while handling disputes.

4. BeatAI: BeatAI offers revenue projections as well as other heuristics that facilitate all the users of the platform to choose who should be hired, where

The Different Levels Offered By Beatbind

BeatBidder	BeatBuy	BeatX	BeatAI
<ul style="list-style-type: none"> The BeatBidder platform connects venues, DJs, as well as other parties that form a part of the musical event organising process. HOW YOU CAN BENEFIT FROM BBND TOKENS?

Beatbind's ultimate aim is to ensure that Beatbind becomes a universal digital token for the music events organising industry. As a worldwide, trustless, as well as affordable method of payment in comparison to the traditional ones, a crypto token is an absolute necessity within the Beatbind ecosystem. The BBND token serves as a utility-based token as well as a medium of exchange for different transactions that occur within the Beatbind ecosystem. Beatbind tokens are new crypto

tokens that will not only unify all the payment systems in the music events industry but will also get rid of physical cards, chips, and other different currencies for several other parties, as well as festivals.

Beatbind will seek partnerships and cooperation to help the industry transition towards one universal, natural payment solution, i.e. the BBND token. Apart from this, Beatbind will also look to list the BBND token on different open exchanges, while providing liquidity outside of its platform.

This will allow users to exchange the BBND token with several other assets like USD and Bitcoin.

Apart from introducing the BBND token, Beatbind also aims to allow fiat currency payment through its platform, which will help make the ecosystem appealing to a vast audience.

BEATBIND'S FUTURE IN THE MUSIC INDUSTRY

There is no denying that the future of Beatbind in the music industry is bright and poised towards growth in the long run. Beatbind has introduced a strong model of business that is non-intrusive and flexible that further makes it flexible enough for withstanding market shifts, as well as scalable enough for capturing a good chunk of the value being offered on the Beatbind platform. Any value captured on the platform will help the Beatbind ecosystem grow, while reinforcing the utility and fundamentals of the Beatbind tokens. The platform will grow owing to the fees collected through all the transactions on the BeatBidder, which will also include event organisation, artist performances, venue leasing, etc. Beatbind will also collect fees through the sale of tickets to Beatbind events. Apart from this, the company will also charge fees for the promotion of artists as well as venues in Beatbind platform search results. In addition to this, Beatbind will also collect fees from crowdfunding of Beatbind events (i.e. through pre-selling tickets). The platform will also charge a subscription fee by offering features like dating, memorabilia bidding, live song bidding, etc. through its fan app. Additionally, the company will also collect fees in the form of live-song bidding and backstage access bidding and revenue through advertising in the Beatbind platform and application feed.

CONCLUSION

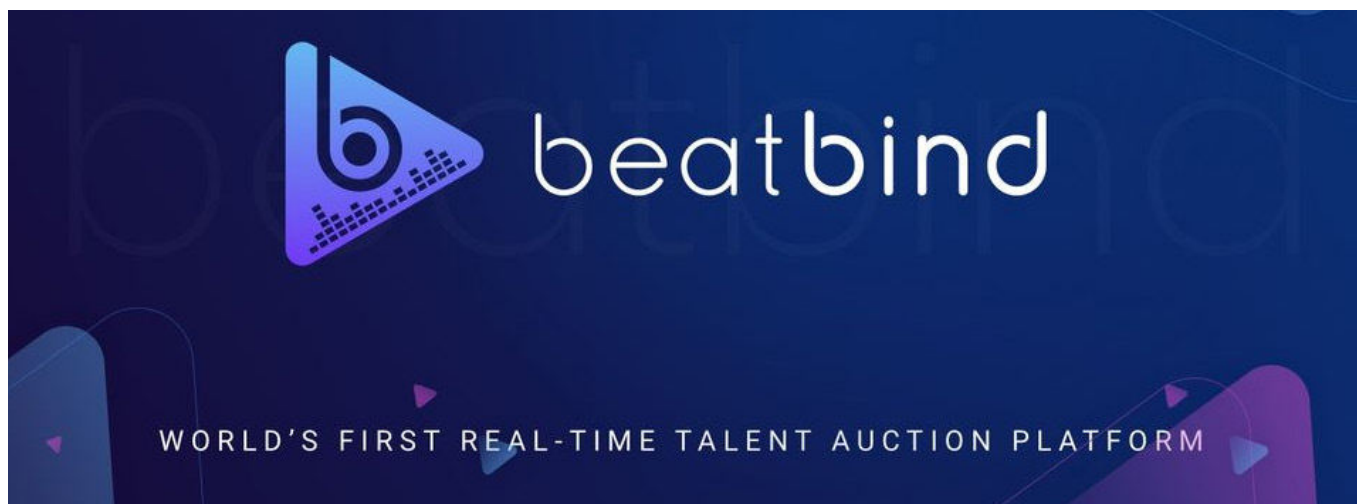

Given the above, the future of Beatbind in the music industry looks promising. The Beatbind

ecosystem not only helps connect music event organisers but also connects musicians, fans, and venues, thereby creating some of the most memorable music events. Beatbind understands that organising a music event, irrespective of its size, is a manual and slow process that involves high costs as well as connection barriers. There are also issues like quality venues or performers who are difficult to reach, absence of connections that limits rising music artists, as well as new venues. Apart from this, middlemen and agencies are inflexible and slow, as well as expensive. This is where Beatbind offers solutions like BeatBidder, which allows the platform to pair artists with organisers and venues. Beatbind ensures that every party within the music event organising industry benefits in terms of increased revenue, bidding opportunities, reduced expenses, and outsourcing event organising to some highly passionate managers. Additionally, Beatbind offers new crypto coins like BBND to facilitate fans and music enthusiasts.

The BBND utility token not only powers the Beatbind platform but also functions as a medium of exchange for the entire music events industry. The Ethereum blockchain offers all the security, privacy as well as decentralisation that Beatbind tokens deserve. Beatbind plans to trade BBND tokens on different public exchanges while protecting BBND users from any price volatility during daily use.

Hence, there is no denying that Beatbind is not only reinventing how music events/functions are organised but also addressing some of the biggest issues of the music events organising industry through the use of blockchain. We hope this Beatbind review was helpful!

For more information about the Beatbind platform, visit <https://www.beatbind.io/> or <https://app.stex.com/en/trading/pair/USDT/BBND/1D!>

\$52K Bitcoin price triggers rally in large caps like Litecoin, Stellar and Bitcoin Cash

Bitcoin's steady climb toward new highs is bringing about the usual breakout from legacy altcoins like LTC, BCH and XLM.

Bitcoin (BTC) has been the uncontested cryptocurrency market leader since its creator launched the digital asset in 2009 and to date, it continues to be the dominant force in the industry.

This truth was put on display on Sep. 6 when BTC price rose to the \$52,000 level and ignited a market-wide rally that lifted the price of small- and large-cap altcoins.

When Bitcoin rallies, most of the legacy coins like Litecoin, Bitcoin Cash, XRP and Stellar tend to move in tandem. Now that BTC looks ready to test new highs, let's take a look at how the so-called 'dinosaur tokens' are doing.

LTC/USDT

Litecoin (LTC) has often been touted as the silver to Bitcoin's gold because its faster protocol was partially modeled after the top crypto, but modified to increase the token supply and block time.

One notable modification to the blockchain over the past few years was the addition of Mimblewimble technology to help increase user privacy and network scalability.

El Salvador Buys Its First 200 BTC a Day Before Its Bitcoin Law Becomes Effective

El Salvador President Nayib Bukele announced on Twitter that his government has bought 200 BTC on Monday, a day before the country's Bitcoin Law, which will make the cryptocurrency legal tender within the Central American nation, goes into effect.

"El Salvador has just bought its first 200 coins," he wrote. "Our brokers will be buying a lot more as the deadline approaches. #BitcoinDay #BTC"

At press time, bitcoin was changing hands at \$51,883.07, up 1.84% in the past 24 hours, according to CoinDesk 20.

Prior to Bukele's tweet, there had been a growing number of users on social media platforms including Twitter and Reddit calling for people to buy small amounts of Bitcoin in support of El Salvador's plan to make bitcoin legal tender, Bloomberg reported, as many investors are betting that the news could give the oldest cryptocurrency a price boost.

In June, Bukele announced that the Bitcoin Law would go into effect on Sept. 7. His government will use the Chivo e-wallet, preloaded with US\$30 of bitcoin for everyone who downloads it.

El Salvador's government has also been working on building infrastructure to support the new Bitcoin Law, including creating a \$150 million bitcoin trust to facilitate exchange between bitcoin and U.S. dollars in the country.

DeGeThal

Decentralized Thaler

Crypto, e-wallet, smart banking and trading made easier.

White Paper 3.0

DEGETHAL PRESALE

Presale Ends in 15 Days

Buy now

Buy on Android

Buy on IOS

Bonus

Product Description

Crypto exchange platform accessible through regulated wallet that provides transparency and funds protection.

DeGeThal as crypto currency for everyday transactions: payments or receipts.

Built using latest blockchain technology, DeGeThal wallet allows the flow of crypto and FIAT coins.

Support for crypto-FIAT transactions

Payments security is guaranteed by checking procedures superior to the one used by banks.

Guaranteed access to the stored funds through DeGeThal exchange, open banking and DeGeThal wallet.

MOBILE BANKING DeGeThal

- Simple and safe storage of your funds
- Connected to the crypto exchange in real time
- Allowing you to pay with cryptocurrency for all transactions, including bills and shopping while enjoying solid security

MINING WATCHDOG PEER-TO-PEER CRYPTO INVESTING PLATFORM

Since cryptocurrency platforms keep popping up each passing day, all that's left is for miners to stay updated with the upcoming one. That information is essential because it makes it easy to make the right decision when choosing one. First, some platforms are a scam, and that's something every investor will have to avoid, like a plague, to avoid incurring losses.

Even when it comes to legit platforms, some are better than others, explaining the need to understand them comprehensively if you want to choose one of the best, if not the best, crypto investment platforms. That's why this piece focuses on one of them, the Miningwatchdog.

It leaves no stone unturned regarding this peer-to-peer cryptocurrency investing platform, not forgetting its decentralised multi-utility tokens. So, let's dive into it without much ado as we unveil everything you need to know about the platform.

A BRIEF OVERVIEW OF CRYPTO MINING AND MININGWATCHDOG

The growth of cryptocurrencies over the last few years has been notably rapid. What do you expect when more and more people are getting interested in them each passing day? The likes of Bitcoin and Ethereum are some of the most popular and rapidly growing cryptocurrencies. As the demand for these cryptocurrencies increases, crypto mining follows suit. In addition to that, the rise of many mining platforms has also boosted the mining sector significantly. Miners have several options to think about when crypto mining, from remote hosting

services to cloud mining platforms.

That's where the Miningwatchdog platform comes in. It combines blockchain and cryptocurrency, among other features, to monitor crypto mining. It also keeps an eye on the various devices by providing necessary information and live updates. If you are a crypto miner trying to figure out how, where, and when to mine cryptocurrencies, that's an excellent place to find out such information, no doubt. The platform allows you to buy or sell cryptos, altcoins, crypto mining equipment, and hash rate. Furthermore, it has mining pool servers and serves as a great and advanced escrow system. We will be discussing these in detail shortly.

WHAT ARE THE PROBLEMS WITH CRYPTO MINING?

It is no secret that it hasn't been a smooth ride for crypto miners. The various problems facing the industry are a clear indication that it hasn't been easy. They include:

First, getting started has proven to be quite challenging. That's due to the need for hashing power since blockchain networks need it for transactions' confirmations. Consequently, miners require various pieces of equipment to happen. They have two options to handle it, and none of them is straightforward. One of them is to look for a reliable miner, and one must admit that it can be hard to come across one. On the other hand, the other option is setting aside money to acquire the necessary mining equipment, which is quite expensive.

Secondly, chances of losing investment are high, especially when dealing with various cloud mining organisations. These companies are usually strict, and their unfair contracts make the situation worse. Since they are single entities, one can only expect a single service from them. They are at liberty to terminate the miner’s contract at any time resulting in loss of investment when they decide to do so.

It is important to note that platforms don’t combine hash rate services and cryptocurrency marketplaces, posing another issue. Therefore, you will need to buy or rent mining equipment first. Once you mine, you then start looking for a place to buy and sell coins mined.

HOW DOES MININGWATCHDOG HELP SOLVE CRYPTO PROBLEMS?

Fortunately, Miningwatchdog has several [solutions to various mining problems](#). Let’s discuss them in detail.

For example, it is a cheap alternative to any crypto miner looking for mining equipment. After all, the peer-to-peer marketplace puts used yet effective mining equipment at your disposal, and the prices are also pocket-friendly. Therefore, for anyone looking for GPU and ASIC miners, that’s a place to go to, and you need not break the bank to acquire one.

If you find it impossible to afford the mining equipment, all is not lost since Miningwatchdog also sells hash rate. Besides affordability, the mining

contracts you get into are fair.

Mining is also not the only way of pocketing coins as far as this platform is concerned. On the contrary, you can also get them as a reward for participating in the ICO. The participants get to pocket their Smartchain Tokens, MSC.

Last but not least, Miningwatchdog maintains a high level of transparency. It is achieved by recording every transaction and activity on an Ethereum blockchain.

WHAT IS THE MSC TOKEN?

MSC token is an ERC 20 token that’s the primary currency when transacting the Miningwatchdog platform and is based on the Ethereum blockchain. Upon submitting a request, it will be sent to a peer-to-peer network comprising many computer nodes. Their role is to verify every transaction and add the required details to the Ethereum blockchain upon their confirmation. Its significant use is buying and selling goods on this marketplace whenever a need arises.

THE 3 TOKEN SALES EVENTS

Below is a discussion of some of the events to look out for regarding MSC token sales.

PRE-SALE

Miningwatchdog has a pre-sale on 30th August 2021. The price of an MSC stands at \$0.5, whereas the total of available tokens is 40 million MSC.

PUBLIC TOKEN SALE

Another sale event will take place between 14th September 2021 and 18th September 2021. Within this period of the public sale, the price per MSC will be \$1.5. As for the tokens, the amount is up to 43 million MSC.

PRIVATE TOKEN SALE

Once the previous event lapses, the next one will be a private sale between 6th October 2021 and 20th October 2021. This event will take place in two phases, and these are the details.

- 1st Phase

The first phase will have a vesting period of 4 months. The price per MSC will be \$2.5, whereas the limit will be 50 million MSC.

- 2nd Phase

On the other hand, the vesting period of the second phase will be two months. The price will go up to \$4 for every MSC. Last but not least, the trading limit will be 50 million MSC.

The distribution of the ICO sales is as follows:

Pre-sale takes up to 8% whereas public sale takes a slightly high percentage, 8.6%. On the other hand, private sale's limit is 20%, and strategic sales will account for 6%.

WHAT ARE THE FEATURES OF THE MSC PLATFORM?

Miningwatchdog is a marketplace that has several incredible features. They include transparency, decentralisation, and programmability, and this is how they benefit the investor.

Decentralisation: It eliminates the importance of having a centralised authority. That eliminates the chance of the platform failing at a single point.

Programmable: Technology has many ways of making things easy, and embracing it is something a miner should consider any day when it is available. Fortunately, this MSC platform has made it available. Consequently, transaction recipients can either be human or smart contracts.

Transparency: Equally important, Miningwatchdog is a marketplace that records every transaction. The records are also available publicly, and they will remain unchanged forever regardless of time.

Use Cases of the Tokens

Besides features, the token also has several use cases:

ADVANCED ESCROW SYSTEM

With scammers taking every opportunity they get to exploit people; this use case is important. Its sole purpose is to eliminate such opportunities by ensuring that the seller doesn't receive the payment until the buyer is satisfied with a particular product. Under such circumstances, the chances of getting scammed reduce if not becoming zero. There is also the peace of mind that comes with doing a transparent, secure transaction. That's what this use case is all about.

The involved parties can include choosing open or anonymous options. As the names suggest, the open option means that the buyers and sellers transact openly. Through a live video conference, the parties agree on the sale in the presence of a Miningwatchdog agent. Besides video conferencing, a live chat may also apply, and all the necessary parties are included, not forgetting the escrow agent.

As for the anonymous option, no escrow agent from the platform is involved. The entire transaction is a secret explaining the high risk involved in this case. That said and done, the escrow system ensures that the seller doesn't get the payment until the buyer approves the product.

CRYPTO TO CRYPTO EXCHANGE

Additionally, the platform is no different from typical exchange platforms for crypto-to-crypto exchange. However, you must be a verified Miningwatchdog member to have this privilege. Another condition for the approval is being a miner who has recently carried out cryptocurrency mining. If that's the case, it will be easy to exchange your crypto and another one. Equally important, one can buy cryptocurrency using supported fiat with ease.

HASHRATE SALES P2P

For someone unwilling to buy mining equipment or join a cloud mining company, peer-to-peer hash rate sales is a great option. It is also suitable for miners with power issues, which is common in underdeveloped or developing countries. Under such circumstances, mining can be hard, but the platform makes it easier as a marketplace that sells mining power, often called mining hash rate.

If you are wondering how it works, miners choose to sell the crypto mining power of their equipment to the public. That earns them a place in the pool of miners. All participants get to share the profit equally depending on the hashing power they contribute to the pool.

CRYPTO MINING EQUIPMENT P2P MARKETPLACE

Another use case is serving as a marketplace for crypto mining equipment. It is important to note

that the equipment is usually used hence comes at an affordable price. Despite being used, expect high-quality mining equipment. Whether you are a buyer or a seller dealing with this equipment, rest assured that Miningwatchdog will ensure that the transaction you undertake becomes successful.

As for the buyers, you have an opportunity to buy great mining equipment without having to break the bank. Don't make a mistake that some of the crypto miners have made in the past. For instance, some of them have had to pay too much for the equipment only to find that what they got wasn't worth what they paid in return. There is also a great benefit of buying used products. In most cases, especially when using such a trustworthy marketplace, you get to take home something amazing at a relatively low price.

On the other hand, sellers get to post their offers and ads on the platform. Besides making it easy for buyers to find mining equipment, it simplifies finding a buyer that is beneficial to the seller.

MINING POOL SERVERS

In this case, crypto miners come together to form a mining pool. Each one of them contributes computing power used to mine cryptocurrencies. At the end of the day, success mining means getting cryptocurrency tokens. Every participant receives a share of what the mining pool makes collectively. Nevertheless, the amount may differ from one miner to another since it depends on how much power the individual contributed to the mining pool.

Notably, the individual miners will have to prove their work or processing power contributed to the mining pool. The servers are in three continents,

North America, Asia, and Europe. They also support commonly mined coins, ASIC and GPU mined coins. With a list of various pools at your disposal, it also becomes easy for a user to compare them, and that's important when determining the most convenient and profitable one to mine on.

CONCLUSION

From the above discussion, it is evident that Miningwatchdog is multifaceted. It also has various ways of solving problems facing the crypto mining sector. The platform has remarkable features, including decentralisation, transparency, and programmability. These are some things that investors should pay attention to at all times.

MSC token has proven to have several use cases, too, and their advantages are impressive. Last but not least, the marketplace has ICO tokens, and that's a fantastic cryptocurrency investment opportunity an investor should take advantage of, indeed. Since the details, including dates and limits, are at your disposal, the ball is now on your court.

94% Financial Industry Pioneers say Digital Assets will Replace Fiat in 5-10 Years: Deloitte Report

Participation in the age of digital assets is not an option—it is inevitable,” says the report, as digital assets have a fundamental impact on deposits and with organizations’ current business models at stake.

An impressive 97% of the financial services industry (FSI) Pioneers and more than three-quarters of all respondents see blockchain and digital assets as a way to gain competitive advantage reports Deloitte 2021 Global Blockchain Survey.

The survey was conducted between late March and early April 2021 as a way to gain insights into overall attitudes and investments in blockchain and digital assets. It polled 1,280 senior executives and

practitioners in the US, the UK, Mainland China, Germany, Japan, Hong Kong, Singapore, South Africa, and the United Arab Emirates.

According to the survey, nearly 80% of respondents said that digital assets would be “very/somewhat important” to their respective industries in the next 24 months.

“The business imperative of adopting blockchain and digital assets is growing noticeably, as organizations increasingly accept that their current business models are at stake,” noted the report.

Financial Giant SBI Aims to Launch Crypto Fund Featuring Five Digital Assets: Report

Japanese financial giant SBI Holdings is reportedly launching the country’s first cryptocurrency fund.

Bloomberg reports that the fund will invest in Bitcoin (BTC), Ethereum (ETH), XRP, Bitcoin Cash (BCH), Litecoin (LTC) and possibly other crypto assets.

Tomoya Asakura, president of SBI affiliate Morningstar Japan K.K, says the fund primarily targets individual investors who are aware of the associated risks of cryptocurrencies and

SBI aims to launch the fund by the end of November and if all goes well, Asakura says that the firm will quickly roll out a second one. He says the financial conglomerate may also consider launching a fund primarily aimed at institutional investors if there is sufficient demand.

It took SBI four years to materialize its plans for a crypto fund because of Japan’s stringent regulations on digital assets. Despite these strict rules, Japan’s crypto industry is pushing forward.

who can invest at least 1 million yen (\$9,112) to 3 million yen (\$27,336).

“I want people to hold it together with other assets and experience firsthand how useful it can be for diversifying portfolios.”

MAXIMISE THE RETURN ON YOUR CRYPTO INVESTMENTS WITH GSX TOKENS FROM SECURITY OF GOLD

Gold Secured Currency is the world's first growth token and the first token with an increasing asset value. GSX offers its owners the benefits of a minimum asset value, similar to that of stable cryptocurrency, and the ability to grow in value. GSX blends the advantages of the best stable coins and cryptocurrencies into a single trust-secured coin that offers the best of both worlds.

Starting with the trust-backed assets, the projected asset value will be .046 cents percent of the total asset value. As the value of trust-backed assets continues to rise, the value of the GSX will rise as a result.

GSX has been listed on several cryptocurrency exchanges and can be invested in directly with fiat money through Instant Invest which allows you to invest fiat in the crypto and withdraw a higher fiat amount as GSX grows. However, to invest through exchanges, you may still get this coin by first purchasing USDT, BTC or ETH from any fiat-to-crypto exchange. You can then purchase this coin from an exchange that trades it.

WHAT EXACTLY IS GSX?

Gold Secured Currency (GSX) is a growth token that rewards its holders with income in exchange for maintaining the value of their assets. GSX is a trust-backed token that appreciates over time, and it combines the advantageous qualities of cryptocurrency, stable coin, and investment coin into a single coin. The currency is maintained on the Apollo Blockchain, ensuring that valid, decentralised transactions are carried out without interference

faster than other blockchains.

Gold Secured Currency has around several acres of property in Zimbabwe that is used for gold and platinum mining. All commissions from token transactions are used to further the development of the company infrastructure and their mining fields and precious metals. In the same way, the process will increase the coins' immeasurable value in the long run. GSX holders may be assured that the coin's worth will never be lower than the combined value of all of the coin's backing assets, which include gold, secured gold, gold ore, land rights, and a gold and platinum group mine, among other things.

HOW GSX SECURES INVESTMENTS WITH GOLD

By investing in GSX, token holders will be transformed into trust beneficiaries. Beneficiaries will be assured security of their investment and don't need to worry about losing the complete value of their investment if something were to happen to the company. Half of the mines' income will be used to maintain and improve the token's infrastructure.

Investing in GSX ensures that the value of your coins can increase over time, while also providing you with investment security thanks to a minimum asset value. Furthermore, investors are not subject to any limits on their holdings and can redeem them at any time. Stakeholders who redeem their coins can receive equal gold value, subject to availability.

BENEFITS OF GSX

INCREASES IN MONETARY VALUE

Another noteworthy attribute of the GSX is that its value is only expected to increase in the future. First and foremost, it is backed by gold and gold-bearing territory. The worth of these two items has always increased over time. The current market's trends do not portend a different conclusion in the future. It is expected that the coin's worth, and thus, the value of the holder's investment, will continue to rise for the foreseeable future.

STAKEHOLDERS WHO BENEFIT FROM GOLD MINING

As a result, holders of GSX will automatically acquire increased value from the GSX asset-backed trust as a result of the gold mining that Gold Secured Currency will establish. The holders of GSX will automatically become the beneficiaries of all of the infrastructure and investments that this firm will have. These investments will be reinvested into GSX and raise its value and the value held by GSX investors.

TRANSPARENCY

Even though the first cryptocurrency was introduced more than a decade ago, a large portion of the population is still unfamiliar with how digital assets work. As a result, potential investors may find it

difficult to place their trust in a company. Investors in cryptocurrency investment initiatives, such as Initial Coin Offerings (ICOs), must confirm the existence of gold-backed reserves, just as they would in other types of investments. Apollo Fintech is concerned with the security of its investors and will allow third-party auditing of their assets as part of its business model. Third-party auditors will check the assets regularly and make their reports available to the public. The information on the asset valuation will be made available to potential investors, and they will be kept informed about the safety of their investment.

HOLDERS HAS THE LEGAL RIGHT TO SELL

Holders of the GSX coin have the option to sell the coin back to Apollo Fintech. The price at which they sell it back will be determined by the current market value of the company's gold stock. Alternatively, they may choose to sell the coins to third parties using Apollo's Knox Exchange or another compatible exchange platform.

THE TOKEN'S REDEEMABILITY IS AN IMPORTANT CONSIDERATION

Anyone who owns GSX coins worth \$200,000 or more can redeem them through Apollo's token programme, which the company runs. The liquidity of the holder is improved as a result of this gesture.

ARE GSX TOKENS AS PROFITABLE AS OTHER CRYPTOCURRENCIES?

Gold Secured Currency (GSX) introduces a new asset backing trend: asset-trust backing complemented by gold backing. Gold is the most stable and reliable investment asset available today. It has maintained a high level of value for more than 3,000 years.

Since the cryptocurrency market is extremely volatile, the use of gold as a backing for stable coins helps to ensure their long-term stability. As a result, users of the GSX are given the assurance that their assets will not depreciate beyond the minimum value set. Users have the option to redeem their GSX coin investments if there are any issues with their investments. When they redeem their stable token, they will receive the amount of gold equivalent to the value of their stable coin.

The developers of the GSX asset own over 3,000 acres of gold-bearing and gold-rich land in Zimbabwe, which they use to mine gold. The value of GSX will be backed by 50% of the profits from gold mining projects annually. Amounts paid for land and mining assets will be used to further bolster the assets' value. This will ensure that the value of stable tokens remains high in the long run.

FOR BOTH BEGINNERS AND SEASONED EXPERTS

The number of users and the number of transactions in the cryptocurrency market have skyrocketed in recent years. According to a recent analysis by Kaspersky, at least 19% of the world's population has purchased and utilised cryptocurrency as of the beginning of 2019. Considering that cryptography has only been around for a little more than a decade, this is a significant increase. A significant portion of the world's population, on the other hand, is still wary about cryptocurrency. One of the reasons for hesitancy is the lack of a strong cryptographic system that integrates all essential services while also focusing on future development. Unfortunately, that shortfall is being addressed by Apollo Fintech, a major blockchain-based organisation. It has launched GSX, a growth token with a wealth of features and a gold backing. The coin incorporates all of the necessary elements to provide investors with the finest possible investment experience in the cryptocurrency world.

The characteristics listed above distinguish GSX from every other stable token available in the crypto industry. Traditional currencies have no intrinsic value to back them up. As a result, they are more susceptible to price drops, resulting in significant losses for cryptocurrency investors.

THE VOLATILITY OF CRYPTOCURRENCY DOES NOT AFFECT THE GSX

The volatility of cryptocurrency has less of an impact on the value of the GSX index. The gold backing ensures that the coin will not exceed a particular threshold, resulting in a decrease in value. It is the only growth coin in the world that has seen its value improve over time. Achieving high liquidity for the coins is likewise a simple process. Keep in mind that GSX is not just any ordinary currency; it also possesses crypto-asset characteristics. As a result, it is the most diversified of all the cryptocurrencies currently in circulation worldwide. The desire for diversity increases, and as a result, the liquidity of the asset increases.

Furthermore, the Apollo Blockchain linked to the GSX boosts the liquidity of the stable coin in circulation. The Apollo Blockchain is capable of hosting a national currency and the National Payment Platform, which is compatible with CBDCs. The site will also host the Apollo Dex, which will allow for the exchange of cryptocurrencies and fiat currency in a matter of seconds. While the blockchain's existing features are important, they are only a small element of the company's grand vision for the future. According to current plans, the best social networking platform of all time is even being considered for implementation.

Higher returns in investments are critical in an ever-expanding decentralised economy when profit margins are tight. Gold Secured Currency is the answer to most issues about the proper actions to take when deciding where to invest your money.

CONCLUSION

As a gold-backed cryptocurrency, GSX brings together various features to provide consumers with a comprehensive experience. The coin's worth will always increase faster than the value of the assets that support it. The company's regulations are transparent because of the frequent auditing that takes place. The company further protects the long-term security and viability of the coin, allowing it to operate smoothly. As we watch other big relationships in many sectors, we conclude that GSX has more to give.

Investing in Gold Secured Currency is the best cryptocurrency investment you can make. The features provided by the development team are intended to improve the financial ecosystem that exists in the cryptocurrency industry. The coin's value is increasing in perpetuity, making it a one-of-a-kind cryptocurrency and growth token at the same time. In addition to the fact that gold, one of the world's most valuable metals, backs the value of the growth token, it is also a less volatile and consequently more secure metal. As a result, it is a given that the GSX coin will attract even more investors (and traditional investors) into the cryptocurrency field in the future. Gold Secured Currency (GSX) is and will continue to be the ultimate crypto investment.

THE BANKING STACK FOR DEFI

WHY MELD?

MELD is the first DeFi, non-custodial, banking protocol. You can securely lend & borrow both crypto and fiat currencies with ease and stake your MELD tokens for APY.

CASH LOANS

Get an instant loan against your cryptocurrency holdings at a competitive APR or get a credit line and only pay interest on what you use.

BUILT ON CARDANO

The MELD protocol is built on the Cardano blockchain, a next generation blockchain delivering fast, safe and cost effective infrastructure for a new generation of DeFi.

BORDERLESS AND DEMOCRATIC

Economic and political changes can't alter MELD's smart contracts. Our DeFi protocol is safe from changing laws or unexpected events.

PROTECT CRYPTO HOLDINGS

Don't let today's small expenses erode your crypto investments. Leverage the value of your crypto to borrow cash when you need it.

DECENTRALIZED AND TRUSTLESS

A world-class DeFi protocol, MELD uses smart contracts to ensure complete transparency and fairness for all parties.

STABLE YIELD EARNINGS

Let your crypto work for you. Earn yields from our staking pools as well rewards in the MELD token.

THE MELD Initial Stakepool Offering

or ISPO is a new and unique method for fundraising that is community oriented and safe for all parties involved. To participate, you simply delegate your ADA in your Yoroi or Daedalus to the MELD staking pool and 100% of the rewards go towards fundin

g MELD. Based on the amount of rewards generated and duration your ADA is staked you will be airdropped MELD tokens on launch. We are launching the ISPO before the private sale to give everyone the opportunity to join in early and reap the rewards.invidunt ut labore et dolore magna .

WHITEPAPER

JOIN OUR ISPO

AMBASSADOR PROGRAM

It's Not About Taxes, Congress is Coming After the Entire US Crypto Industry

A little over a year ago, Senegalese-born songwriter Akon proposed to build a new city worth around \$6 billion that would be the “beacon of innovation and human development” in Senegal.

At inception, the proposal was greeted with much glamor and enthusiasm, however, a year after and little to nothing has been done except laying of its foundation stone.

While Akon, undeniably, had big dreams and plans for the city —he made several references to the popular fictional African city in the Black Panther movie, Wakanda— the locals who had believed that the new city would usher in a new wave of development and progress are beginning to view it as another failed promise.

Locals losing faith in the project

A local, Jules Thiamane, who has experience in the tourism sector shared the sentiment of other locals about the project.

According to him, the project was launched with many “speeches and promises” however, he continued that, “compared to everything that was announced, I don’t think we have seen much yet.” This view was also shared by another local, Ahmeth Deme, a student, who felt that the project might have been canceled.

The gloomy picture painted above is not shared by all the locals. The president of the Mbodiene village youth association, David Seck Sene, declared that he still has hope for the project and that a project of that magnitude could not just stop.

UK’s Financial Watchdog says, No Real-World Cash Flows Underpinning the Price of Digital Tokens, Not Even Bitcoin

Britain's Financial Conduct Authority (FCA) said Monday that creating a regulatory regime for the cryptocurrency industry will take careful thought.

Britain’s finance ministry already had a public consultation as to

any new speculation – it may not end well.”

According to Randell, there are two areas where the regulators should take action; one is to reduce the damage from the promotion of cryptocurrencies, and the other is to stop the

whether some crypto-asset promotions need regulation.

“There are no assets or real world cash flows underpinning the price of speculative digital tokens, even the better known ones like Bitcoin, and many cannot even boast a scarcity value,” FCA Chair Charles Randell said in a speech.

“We simply don’t know when or how this story will end, but – as with

contagion at authorized firms from unregulated activities in these assets.

In the past few months, the FCA issued warnings against the leading cryptocurrency exchange Binance and banned it from undertaking any regulated activity. The watchdog said the exchange isn't capable of being supervised properly.

FERRUM NETWORK'S ADOPTION OF BLOCKCHAIN & CROSS-CHAIN TOKEN BRIDGE

Cryptocurrencies have grown into a trillion-dollar business, causing a wave of financial disruption around the world. Cryptocurrencies have a long history of innovation that dates back to the 1980s when cryptography developments were made. Since then, a succession of events has impacted the crypto world, the most notable of which is the first cryptocurrency, Bitcoin. Despite its meteoric rise over the past 12 years, financial services for Bitcoin have been reluctant to emerge, owing to its fundamental lack of stability and adoption.

Because of its substantial price fluctuation, mainstream banks will not accept a Bitcoin loan, making Bitcoin a poor asset for accurately planning any investment.

Things move fast in the crypto world, and decentralised finance (DeFi) is a trend right now. The shift from old, centralised financial institutions to peer-to-peer finance enabled by decentralised technology built on the Ethereum blockchain is known as decentralised finance or DeFi. The Ferrum Network is a project that is working to create a DeFi ecosystem that interacts across chains and eliminates hurdles to mainstream adoption, developed by distributed-systems professionals with industry-leading experience from some of the world's most well-known IT firms.

THE ROLE OF THE FERRUM NETWORK IN BLOCKCHAIN ADOPTION

The Ferrum Network is a high-speed interoperability network that was intended to address two major issues that have hindered the widespread

acceptance of cryptocurrencies and blockchain deployments for real-world financial applications: sluggish transaction speeds and a lack of network interoperability.

A fiat gateway, crypto custody, an integrated wallet, risk-free over-the-counter (OTC) trading, and peer-to-peer payments are all included in the Ferrum product line. Ferrum Network also has a mobile messaging software that allows users to send crypto payments via text message! In the Ferrum Network ecosystem, the native Ferrum Network utility coin (FRM) is extremely important. The FRM token and the linked UniFyre Wallet are becoming a significant part of many people's daily lives as the platform grows in popularity.

WHAT ARE THE PROBLEMS WITH TOKEN BRIDGES TODAY?

Cross-chain technology is gradually becoming a popular topic of conversation, as it is considered the ultimate solution for improving blockchain interoperability. In layman's words, cross-chain technology is a new technology that aims to allow value and information to be transferred between multiple blockchain networks. The cross-chain protocol ensures that blockchains may communicate with one another, allowing for exchanging value and information between them. Combining such protocols with decentralised public chains can develop the foundation for widespread adoption and usage of the blockchain.

Cross-blockchain interoperability enables multiple blockchains to communicate without the use of intermediaries. This means that blockchains with similar networks will be able to trade value with one another. Businesses will no longer have to struggle just with clients on the network on which the business is based while using it in a business ecosystem. Instead, businesses will be able to transact with clients on other blockchains that are compatible. There would be no downtime or high transaction costs during the entire process. Cross blockchain interoperability will provide blockchain networks with an effective mechanism of value transmission, much as it did with the Internet of Value.

People have mostly been unable to reap the full benefits of ledger technology since the chains operate in isolation. People have been unable to fully benefit from blockchain technology because of the incapacity of multiple blockchains to communicate with one another. Cross-chain technology aims to address all of these concerns by providing interoperability between blockchains, allowing them to communicate and share information more easily. Despite these conveniences, presently, there are some problems with Token Bridges. These are:

IT HAS RESTRICTED ACCESS

The majority of projects on today's major cross-chain bridges are purely larger-cap projects. As a result, present solutions erect a large barrier to entry for new projects. Their community members are unable to make use of the advantages that cross-chain exchanging provides.

IT IS HARD TO USE

Some cross-chain bridge solutions have a lot of space for improvement in terms of user experience. As a user, it can feel like you need to read a whitepaper to figure out how to shift tokens between chains.

THIRD-PARTY INVOLVEMENT

The present cross-chain bridge solutions on the market are designed in such a way that they bring needless third-party exposure into the token swapping process. Furthermore, in many circumstances, the bridge technology provider manages and controls the liquidity, necessitating projects and community members to place their trust in the bridge technology provider.

HOW DOES THE FERRUM NETWORK'S CROSS-CHAIN TOKEN BRIDGE WORK?

**THE FERRUM NETWORK'S
CROSS-CHAIN TOKEN
BRIDGE WORK**

It is open to all
The Ferrum Network Cross-Chain Token Bridge, unlike most significant bridges on the market today, is open to projects at any stage.

UX for the Application
Our goal while designing UX for our applications is to make the experience as simple as possible so that no guide or help video is required to use the solutions we're developing.

A Trustless Solution For A Trustless Industry
Projects don't have to rely on a third party to manage the liquidity of their tokens on the Ferrum Network Cross-Chain Token Bridge. They have complete control over their cash flow.

CRYPTONAIRE WEEKLY
PLATINUM CRYPTO ACADEMY

One of the Ferrum Network's key principles is interoperability. The Ferrum Network Token Bridge makes token transfers between Ethereum and Polygon Chain, as well as with Binance Smart Chain, simple and quick. This is also displayed in a simple user interface and is a cost-effective means for transferring assets between ERC-20, MATIC, and BEP-20.

The Ferrum Cross-Chain Token Bridge will offer a white-label solution for any project that wants to make its token cross-chain instantly compatible.

The goal of this project is to lower the hurdles to cryptocurrency adoption. The Ferrum Network Cross-Chain Token Bridge's launch is a big step toward allowing crypto projects to expand their impact across many major crypto ecosystems. Here is the solution that the Ferrum Network's Cross-chain Token Bridge provides:

IT IS OPEN TO ALL

The Ferrum Network Cross-Chain Token Bridge, unlike most significant bridges on the market today, is open to projects at any stage. Furthermore, the Ferrum Premium Token Bridge white-label deployment may be tailored to meet the needs of a wide range of corporate use cases, making it a good fit for both new initiatives and established enterprises.

UX FOR THE APPLICATION

Our goal while designing UX for our applications is to make the experience as simple as possible so that no guide or help video is required to use the solutions we're developing. We built a simple in-app step-by-step guided process that leads the user through the Ferrum Network Cross-Chain Token Bridge's 5 Steps to trade tokens. This is only the first iteration of our new user experience strategy. We will continue to provide delightful experiences that make interacting with and using any of our applications a lot of fun.

A TRUSTLESS SOLUTION FOR A TRUSTLESS INDUSTRY

Projects don't have to rely on a third party to manage the liquidity of their tokens on the Ferrum Network Cross-Chain Token Bridge. They have complete control over their cash flow. This is just the first iteration of our Cross-Chain Token Bridge; as the product evolves, we will continue to add more decentralised security protocols to the bridge.

The Ferrum Network's Cross-Chain Token Bridge is a ground-breaking innovation that will allow assets to be transferred between Ethereum, BSC, and Polygon (MATIC) without the need for an intermediary chain. The Ferrum Network Cross-Chain Token Bridge is poised to be the industry's

quickest and most secure Cross-Chain Token Bridge. If you wish to exchange your BEP20 tokens for MATIC tokens right now, you'll have to go through a long process. It's as simple as clicking "Swap" on the Ferrum Network-powered Cross-Chain Token Bridge which will be available in the very near future.

WHAT TECHNOLOGY DOES FERRUM USE TO ACCELERATE BLOCKCHAIN ADOPTION?

Ferrum's objective is to aid in the general adoption of blockchains by assisting other organisations and projects in the development, launch, and operation of blockchains while using its fast interoperability network to provide multitude of products to benefit the projects and community.

One of the services is Ferrum's Blockchain as a Service (BaaS) offering lies at its core. BaaS providers effectively "host" projects on top of their blockchain and offer services to help support their clients, seeing the underlying need for an easier approach to utilise blockchain technology. This is similar to the services provided by typical web server hosts, but Ferrum goes above and beyond.

One of the most difficult issues for new projects emerging on blockchains is the volatility of their token prices. Once a product is published, prices often climb quickly before plummeting, and investors may lose interest and move on. Ferrum addresses this by providing a Staking as a Service (SaaS) solution to all of their clients. Staking is the process of a token holder "locking" any number of their tokens for a set period of time. These token holders are then rewarded with tokens or other assets, such as NFTs. Staked coins are essential for new projects since they eliminate market liquidity and encourage investors to hold rather than sell. This will frequently provide a project with a pricing floor when there would otherwise be none.

Offering a token to the general public has its own set of challenges. Armies of bots grab tokens from real investors when projects make their initial exchange listing. These bots cause prices to spike frequently by multiples of the initial listing price, denying regular investors the opportunity to participate at a reasonable price. At some point, the bots start selling their coins, causing the price to collapse, leaving investors with tokens they overpaid for and the project with a token that is losing value. Except for the bot operators, no one wins. The idea of Ferrum's solution to this problem is simple: block the bots from trading. Ferrum blacklists addresses that appear to be bot addresses, preventing them from trading on protected tokens.

Ferrum's most recent offering has likewise proven to be popular. With the introduction of cross-chain swapping and trading, projects are discovering that adding liquidity across various blockchains is becoming increasingly vital. Ferrum has developed a white label Token Bridge that allows projects and people to connect their tokens to Ethereum, Binance Smart Chain, and Polygon blockchains (formerly known as Matic). Ferrum's Token Bridge is already a highly sought-after addition to their line of services as cross-chain adoption continues to gain traction. Ferrum's BaaS operation is now giving this innovative technology to businesses wishing to shift on-chain with simplicity, thanks to the boom of cryptocurrency markets and the widespread adoption of blockchains.

FERRUM WHITE LABEL SOLUTION EXPLAINED

White Label Solutions boost crypto and traditional projects, making it easier for them to get their products to market. Ferrum's white-label blockchain solutions have become well-known and popular in the market. Ferrum's white-label staking technology is already being used by more than 90 projects totalling more than \$30 million in TVL. The Cross-Chain Token Bridge is being added to an already popular service. The white-label deployment of the Ferrum Network Cross-Chain Token Bridge solution will allow projects to rapidly make their tokens swappable between several chains.

The Ferrum Network Cross-Chain Token Bridge can be deployed as a fully-managed solution without contributing to the project's technical debt or delaying development objectives. The Ferrum Network Cross-Chain Token Bridge can also be deployed as a self-hosted solution for enterprise or large-scale deployments. The bridge's white-label deployment has a built-in deflationary mechanism that allows projects to set "Bridge Fees" in their native token per swap. These fees can be burned, used as community awards, or used to fund the project's expansion and R&D.

CONCLUSION

Ferrum has taken strategic decisions from the beginning with the goal of finding customers and creating something useful. This may appear obvious to outsiders, but in the crypto industry, there are still many major enterprises that are based completely on promises and do not do anything.

With the rise of DeFi applications, other platforms may face stiff competition from plenty of new initiatives. Ferrum Network, on the other hand, is already well-established and on its way to becoming a major player in the DeFi space.

Twitter To Allow Users Receive Bitcoin And Ethereum Via Its Tip Jar Feature

Soon Twitter may allow its subscribers to include Ethereum and Bitcoin cryptos in their portfolios for receiving crypto tips.

Alessandro Paluzzi, in a tweet, backed the claim confirming that Twitter is working hard to achieve this aim. It will enable users to add the two crypto addresses to their profile to get tips through Tip Jar Feature. Alessandro, the app developer, added.

Former Huobi Exec Launches \$25M Fund Seeking to Bridge CeFi, DeFi and the Metaverse

A former executive at crypto exchange Huobi has launched an inaugural fund of a little-known venture capital firm backed by some of the industry's top institutions.

OP Crypto Capital Management Ltd., formed two months ago and announced Monday by the former senior investment director of Huobi Capital, David Gan, aims to bridge centralized and decentralized finance with the Metaverse.

Gan was also recently the former managing director of Huobi Labs, the exchange's blockchain incubator which began in 2017.

The firm is backed by Huobi Ventures, Galaxy Digital's Vision Hill, Bybit's investment arm

Mirana Ventures, The Brooker Group and Digital Currency Group, the parent company of CoinDesk.

OP Crypto says it plans to achieve its lofty goal by investing in projects it believes will help shape the future of corporate governance and transfer power from centralized entities to content creators in the upcoming Web 3.0 ecosystem.

Gan told CoinDesk in an interview that the firm's fund had targeted a soft cap of around \$25 million but was oversubscribed by an as yet undetermined amount that "should end up well above the initial soft cap mark."

KAIKEN INU

A FEATURE-PACKED DEFLATIONARY TOKEN WITH REAL USE CASE

Over the past 18 months, DeFi protocols have taken the crypto markets by storm. There has been an unprecedented rise in the total value locked (TVL) of DeFi tokens. Now, as many institutional investors are jumping the DeFi bandwagon as retail and private investors, the data released by the top cryptocurrency exchanges reveal that more and more conventional investment giants are now betting big on decentralised finance.

Lately, we have been introducing our readers to promising upcoming and ongoing projects that we see are spinning investor eyeballs. While the DeFi space is yet to mature, some issues have been disenchanting investors. The challenge to find the best DeFi project and the top rewarding token becomes more challenging as the options seem to be plenty. However, not all projects are the same and not one box fits all. Kaiken Inu is a promising DeFi project that has garnered investor attention, compelling us to discuss the project further. In this article, we will go in-depth with our Kaiken Inu review and explore what it has to offer.

WHAT IS THE KAIKEN INU PROJECT?

Kaiken Inu is a DeFi project but with a difference. It is a feature-packed, deflationary token with a complete ecosystem that is perfectly created to help mid-cap investors looking to tap into the DeFi markets. Strategically, the project also leverages the power of meme tokens. Kaiken Inu calls itself a decentralised staking token on Ethereum Network with a community-governed platform, NFT Marketplace, and Hybrid HD Game. The idea behind the Kaiken Inu project is to provide an advanced

alternative to conventional DeFi protocols and also make DeFi easily accessible to all. In addition, it also offers more scalable passive income opportunities and utility, contrary to typical meme coins. Most meme coins have no intrinsic value. That is not the case with the Kaiken Inu token. The Kaiken Inu project is a complete ecosystem with different features that allow token owners to get access to more exciting income opportunities. Also, it is essentially a DOG coin that is driven by a purpose. If you're an animal lover, by owning Kaiken Inu tokens, you will be automatically contributing to their wellness. The project will donate a certain percentage of the circulating token supply to a chosen recipient which will be announced later. The project also has a broader vision and is futuristic in approach. From the very onset, Kaiken Project is committed to making progress on the development front by adding new products and platforms to its ecosystem. Kaiken plans to launch a native NFT marketplace, launchpad and more.

WHAT ARE KAIKEN INU TOKENS?

Kaiken Inu tokens are decentralised tokens built on the ultra-powerful Ethereum Network. These tokens are native to the Kaiken Inu ecosystem (we discuss the details in the subsequent section). The native Kaiken Inu tokens have multiple utilities within the Kai ecosystem. They can be used to generate a passive income as token holders are guaranteed rewards, which increase in perpetuity as the transactions on the network grow. Kaiken token owners also get to participate in the governance of the platform and have a say in the decision making. Investors can also get access to various features of the Kai ecosystem and

explore additional income opportunities like staking Kaiken Inu tokens. In addition to Kaiken Inu tokens, the platform also offers other tokens built for specific purposes allowing users chances to earn more Kaiken Inu tokens by participating in different activities.

It is important to note that Kaiken Inu tokens are highly scalable and they are greener tokens. Kaiken Inu tokens leverage the Ethereum network, which is a proof of stake (PoS) blockchain. Unlike the conventional proof of work (PoW) blockchains, Ethereum network consumes minimum power and it is highly environmentally friendly when compared with cryptocurrencies like Bitcoin. The ecosystem design also makes the tokens not only more profitable but also sustainable. Issues such as liquidity and security are dealt with. A certain percentage of the transactions are locked in liquidity to keep the liquidity floor stable. Also, the continuous burn and contribute to increasing token prices because of reduced supply and scarcity. Moreover, game lovers will appreciate the soon to be released game which will be built by a real game developer company.

KAIKEN INU TOKEN FEATURES

Kaiken Inu tokens are a next-generation meme coin that not only represents the internet culture and is cause-driven but also provides investors with seamless opportunities to grow their crypto wealth. We already discussed the use of the Kaiken Inu tokens and what sets them apart in the previous section. Here, we would like to focus on exclusive features that make Kaiken Inu Tokens stand apart from the typical DeFi Coins.

1. Innovative DeFi token that expands the horizon for meme and Dog Coins: The limited utility of typical meme coins has been one of the biggest investor pain points. Even coins such as Dogecoin and Shiba Inu, despite being so successful, lack utility. All investors can do is rely on the price movement, which is not something they can control. If the prices go down, the investments suffer. Kaiken Inu takes it to another level. As a meme token, it is advanced because it also leverages the best of DeFi protocols to provide users with a unique opportunity to earn passive income.

2. Connecting philanthropy and blockchain: The Kaiken Inu project is planning to connect philanthropy and blockchain and is pioneering the philanthropy 1.0 concepts. Its decentralised mechanism allows for the automated distribution of funds to DOG shelters across the globe. A certain percentage of circulating tokens is given in charity to Dog shelters. While token owners continue earning with their Kaiken holdings, they also get to participate in charitable activities.

3. Non-Fungible tokens: Kaiken Inu will also be used

to create NFTs.

EXPLORING KAIKEN INU ECOSYSTEM

Kaiken Inu is not just a typical DeFi project where you get to buy a coin and it promises a fixed reward. Kaiken is laden with all the features of a conventional DeFi token but also offers an advanced and robust thematic ecosystem, which makes DeFi investments fun, profitable, transparent and, most importantly, highly secure. Let's take a quick look at the Kaiken Inu ecosystem.

1. Dog Farm: Kaiken Inu dog farm allows Kaiken token owners to stake and increase their crypto earnings. In the dog farm, Kaiken Inu tokens are paired with other coins like Ethereum's ETH to earn staking rewards.

2. Dog House: This is another Kaiken token that users can leverage to earn Kaiken Inu tokens. It can be paired with Kaiken Inu tokens and earn rewards. The best part is these tokens generate quicker rewards and almost twice that of the Kaiken Inu tokens.

3. Dog Vitamin: These are other tokens powering the Kaiken Inu ecosystem. These tokens are used to feed the crypto puppies within the ecosystem to help them become powerful fully-grown dogs for Dog Games.

4. Dog Food: Another token to provide more strength to crypto puppies. These tokens help crypto puppies to become NFT or digital assets, which can be traded on the open market.

5. Crypto Puppies: Crypto puppy is a special token that users will earn as rewards for staking Kaiken Inu tokens.

6. Dog Games: A set of native games where Dogs will compete with each other to get to the next level. In the process, token owners will be able to earn more rewards by participating in these games.

On top of these, the Kaiken Inu ecosystem has other components and plans.

- Kaiken NFT Marketplace: Non Fungible Assets have been gaining immense popularity. The Kaiken Inu ecosystem hosts a native NFT marketplace where Kaiken Inu token owners can get access to the hottest NFTs on the market. The Kaiken NFT Marketplace is a "decentralised marketplace for buying and selling of Non Fungible Tokens. It offers special benefits for \$KAIKEN token holders, including discounts, gifts and fee incentives. More features could be added through Kaiken Governance." Kaiken Inu token owners can use their tokens to acquire NFTs and also participate in the governance to decide the features and functionalities of the marketplace.

All in all, the Kaiken ecosystem offers a complete package to investors who are looking to tap into the DeFi markets. The most important aspect is it gives control back to the community. As such, even a mid-cap or retail investor remains in full control of their token ownership and gets exclusive opportunities to multiply their crypto wealth. It makes Kaiken Inu one of the top rewarding tokens on the market.

HOW TO EARN AND GROW WITH KAIKEN INU

DeFi is exploding. Kaiken Inu provides investors with an opportunity to leverage their crypto wealth and earn a steady income. The best part is that users have multiple different earning opportunities and don't have to rely solely on the price movements. There are many different ways that users can earn and grow their crypto wealth with the Kaiken Inu project:

1. Staking Kaiken Inu Tokens: The Kaiken Inu

Dog Farm allows users to stake their Kaiken Inu tokens and earn static rewards. The process can be automated to generate fixed and guaranteed passive income. An exciting update is that Kaiken Inu is already planning to partner with other staking tokens, which will provide investors more options and flexibility to earn better staking rewards.

2. Other Rewarding Tokens: The Kaiken Inu ecosystem offers many different rewarding tokens, and users can choose to leverage what suits them best. For example, the Dog Farm, which has a separate token, when paired with Kaiken Inu tokens, will allow investors to earn rewards twice as fast.

3. Dog Games: By participating in Dog Games with their tokens, users on the platform will be able to earn additional rewards. There are native Dog Games to participate in, and with every level, the earning can increase.

CONCLUSION

Both DeFi and meme coins are on a roll. Kaiken Inu is a hybrid token that leverages the best of both worlds and provides investors with unique opportunities to grow their crypto wealth. Most importantly, Kaiken is a full ecosystem of different products and token sub-sets, which not only provides Kaiken token owners with utility but also gives them the flexibility to participate in rewarding activities of their choice. Kaiken is also futuristic in approach and offers practical utility to investors. The project will also feature its native NFT marketplace. Not to mention that it also serves the purpose of helping dog shelters globally. On top of all these, Kaiken Inu team will bring the most anticipated high-end 3D dog game where Kaiken token and other token offerings can be fully utilized. As such, if you're looking to grow your crypto asset with DeFi, Kaiken Inu should be on your list of top DeFi projects to consider.

The banner features a dark blue background with a central illustration of a server room and a laptop. The server room contains several blue server racks and two server towers on a platform. A laptop to the left displays a bar chart. A QR code is located in the top right corner. The Kaiken Inu logo, a stylized husky head in a red circle, is in the top left. The text 'Release the KAIKEN' is prominently displayed in white, with 'The Most Featured-Packed Inu is Now Released!' below it in a lighter blue. At the bottom, the text 'Welcome to Kai ken inu' is written in white, with a large circular logo of the husky head in the center. The background is decorated with a network of light blue cubes connected by lines.

India Has New Plan to Regulate Cryptocurrencies

India is reportedly working on a new way to regulate cryptocurrencies. “The government is planning to define cryptocurrencies in the new draft bill that also proposes to compartmentalise virtual currencies on the basis of their use cases,” according to a report.

How India Will Regulate Cryptocurrencies
India is reportedly planning to regulate cryptocurrencies as commodities based on use cases.

“The government is planning to define cryptocurrencies in the new draft bill that also proposes to compartmentalise virtual currencies on the basis of their use cases,” The Economic Times reported Friday, citing three people aware of the development. The publication detailed:

Cryptocurrencies will be treated as an asset/commodity for all purposes, including taxation and as per use case — payments, investment or utility.

“Crypto assets can be either categorized on the basis of the technology they use or they can be defined on their end-use. So, before talking about how the regulations should work, the government has to spell out what it means by cryptocurrencies,” said one of the persons with knowledge of the matter. The

person added that the government “is not looking to allow payments and settlements through virtual currencies.”

LINK price locks in 36% gains following Ethereum layer 2's Chainlink integration

The price of LINK also surged in the wake of a marketwide bullish boom, wherein Bitcoin and its top rivaling altcoins jumped in tandem.

Chainlink emerged as one of the best cryptocurrency performers on Sept. 6 as the price of its LINK token jumped 8.25%

against the U.S. dollar.

The LINK/USD exchange rate reached \$36.35 for the first time since May 20, months after bottoming out near \$13.45 — thus recovering by more than 170% altogether. At the same time, its recent bout of buying saw prices bringing in about 36% month-to-date returns.

Ecosystem growth Optimism Ethereum announced on Sept. 1 that it had integrated Chainlink's market-leading decentralized oracle solutions to its Ethereum layer-two services. As a result, LINK — which serves as a payment and staking token inside the

Chainlink ecosystem — rose by 36% on the prospects of seeing higher interim demand from Chainlink users.

The same fundamentals previously assisted LINK investors in closing 2020 at a 540% profit.

A booming decentralized finance (DeFi) space and its dependency on Chainlink to secure live data feeds pushed demand for LINK higher among users and speculators alike. As a result, Chainlink's market share in the DeFi reached 80% at one point in time, reported ZDNet.

FTX Launches Cross-Chain NFT Marketplace for Both US and Global Users

Cryptocurrency exchange FTX now allows anyone to make their own non-fungible tokens (NFT).

On Monday, the CEO Sam Bankman-Fried took to Twitter to share that the DIY NFT listing is available on both FTX and FTX.US for its American users.

Just two weeks back, in an interview with CNBC, Bankman-Fried had noted about the NFT craze, saying, "It's almost going mainstream faster than the mainstream understands what it is they're adopting, which is a weird phenomenon."

This NFT mania as expected was seen at FTX as well and the exchange has now introduced a charge of

a one-time \$500 fee to submit the digital art.

"Due to the massive number of submissions, too many of which were just a picture of a fish, we are now charging a one-time \$500 fee to submit NFTs," tweeted Bankman-Fried. "Hopefully this will reduce spam."

Bankman-Fried kickstarted the cross-chain marketplace with his own NFT "Testing Testing 123 #1." SBF's test NFT currently has a total of 22 bids with the highest one for \$2,000.

Additionally, deposits and withdrawals will be opened up in the next couple of weeks which means users will be able to deposit outside NFTs such as Bored Ape Yacht Club and CryptoPunk on the platform.

Matrixport Joins Growing List of Crypto Unicorns After \$100M Investment

Singapore's central bank had ordered Binance.com, the global version of Binance, to stop soliciting customers in the country.

Binance has announced limitations to Singaporean customers three days after the country's central bank placed the cryptocurrency exchange on an Investor Alert List and ordered the exchange to stop soliciting business from Singapore residents.

From midday Singapore time on Friday, September 10, Binance.com will cease trading pairs with the Singaporean dollar, stop Singaporean payment options and boot the app from Singapore's iOS and Google Play stores.

Binance advised customers to finish all trades and remove advertisements by midday UTC+8 on Thursday "to avoid potential trading disputes."

The Monetary Authority of Singapore said on September 2 that it "is of the view that Binance, the operator of Binance.com, may be in breach of the Payment Services Act" and ordered it to stop providing payment services to Singapore residents. Then the MAS added Binance.com on its Investor Alert List.

The MAS has not listed the Singaporean version of Binance's exchange, Binance.sg, which is operated by Binance Asia Services and remains unaffected by the ban.

Crypto.com Names Former Visa Country Manager to Head South Korea Operations

Crypto.com appointed Patrick Yoon, former country manager at Visa Korea and Mongolia, as its general manager for South Korea.

Yoon's experience in the country will help the crypto exchange reach "new heights," CEO Kris Marszalek said in a statement.

During his three-year stint at Visa, Yoon worked with regulatory bodies and financial institutions. Prior to his time at Visa, Yoon worked at Standard Chartered Bank in South Korea, Singapore, Taiwan and the U.K.

The Crypto.com app offers trading, lending, and payment services. The firm also offers a Visa card to users who stake its token, CRO, for more than 180 days, according to its website.

In the past 12 months, the app has grown fivefold to 10 million users. Spending on the Crypto.com Visa card grew by 55% in 2020, it said in March. In August, Crypto.com picked former Spotify Executive Henrik Johansson to head its growth operations. Johansson aims to reach 100 million users in two years.

Meanwhile, South Korean crypto exchanges are struggling to meet a September regulatory deadline.
