HOW ARTIFICIAL INTELLIGENCE HAS REVOLUTIONIZED TRADING	33

Editor's Letter

The total crypto market capitalization climbed above \$300 billion on February 12 for the first time since August 2019. As Bitcoin stayed above the psychologically critical level of \$10,000, new targets for Bitcoin flew thick and fast. Fundstrat Global Advisors co-founder, Tom Lee, said that he expects Bitcoin to reach 40,000 before the Dow Jones index, which at that time was about 29,280.

OUR BLOG ARTICLE FOR THIS SPECIAL ISSUE IS ABOUT HOW ARTIFICIAL INTELLIGENCE HAS REVOLUTIONIZED TRADING

The bulls could not push the price above the overhead resistance at \$10,540.49. This resulted in profit booking by the short-term traders, which has dragged the price to the breakout level of \$9,600. The next trending move will start on a break above \$10,540.49 or on a break below \$9,600. If the bulls can scale the price above \$10,540.49, the uptrend can reach \$12,000 and above it \$12,770.

Lastly please check out the advancement's happening in the crypto currency world and Crypto Conference EDCON (Community Ethereum Development Conference) is a non-profit global Ethereum conference that happens once a year in different countries, and it is mainly committed to serving the Ethereum ecosystem, boosting the communication and interaction of Ethereum communities worldwide.

Enjoy the issue!

WEEKLY CRYPTOCURRENCY MARKET ANALYSIS

Hello, crypto traders welcome to this week's 118th edition of Cryptonaire Weekly. The overall Cryptocurrency Market Cap stands at \$287 Billion. We have seen a \$6 Billion Increase in the Market Cap since last week. Bitcoin price is currently around \$9800 from \$9765 last week and has increased by 0.36% and with a sharp rally touched the years high above \$10500 on the 13th of February 2020. Ether price is now at \$270 from \$220 last week and has increased by 22.73%. The current market cap for bitcoin is \$179 Billion, and for Altcoins, the current market cap is \$108 Billion.

The total crypto market capitalization climbed above \$300 billion on February 12 for the first time since August 2019. As Bitcoin stayed above the psychologically critical level of \$10,000, new targets for Bitcoin flew thick and fast. Fundstrat Global Advisors co-founder, Tom Lee, said that he expects Bitcoin to reach 40,000 before the Dow Jones index, which at that time was about 29,280.

That was followed by the serial venture capitalist Mike Novogratz projecting Bitcoin to reach or at least retest the old highs in 2020. He said that Bitcoin was the "best new brand of the past eleven years" and had "found its own lane" as a unique store of value. Novogratz underlined Bitcoin's property as a hedge against the current easy monetary policy.

Both the forecasts were topped by celebrated TV host Max Keiser who raised his price target on Bitcoin from \$100,000 to \$400,000. He believes that the traders can buy Bitcoin even at \$10,000 and make 40x money.

While we are also positive on Bitcoin, we believe that the bulls will face stiff resistance between the current levels and \$20,000. We do not see Bitcoin making a new high without large scale participation from the institutional players, which is yet to take off. Therefore, we suggest traders take it one step at a time and not get carried away by these lofty targets.

Percentage of Total Market Capitalization (Dominance)

Bitcoin	62.23%
Ethereum	10.24%
XRP	4.44%
Bitcoin Cash	2.62%
Bitcoin SV	2.01%
Litecoin	1.66%
Tether	1.62%
EOS	1.49%
Binance Coin	1.28%
Tezos	0.79%
Others	11.63%

CRYPTO TRADE OPPORTUNITIES

BITCOIN - BTC/USD

The bulls could not push the price above the overhead resistance at \$10,540.49. This resulted in profit booking by the short-term traders, which has dragged the price to the breakout level of \$9,600.

If Bitcoin bounces off \$9,600, it might again move up to \$10,540.49 and remain in this range for a few days. The flattening 20-day EMA and the RSI just above 50 levels also point to a consolidation.

The next trending move will start on a break above \$10,540.49 or on a break below \$9,600. If the bulls can scale the price above \$10,540.49, the uptrend can reach \$12,000 and above it \$12,770.

Conversely, if the bears sink the price below \$9,600, the cryptocurrency can drop to \$9,000. If this support cracks, the trend will turn in favour of the bears. Traders should avoid long positions if the price sustains below \$9,000.

ETHEREUM - ETH/USD

COINBASE:ETHUSD, D 268.56 ▲ +0.53 (+0.2%) O:268.20 H:272.00 L:263.71 C:268.56

Contrary to our assumption, Ether did not retest the breakout level of \$200. The momentum was so strong that it easily carried the price above the overhead resistance at \$239.45 and hit the target objective of \$283.75 on February 14. At times, the breakouts that are strong don't look back and give an opportunity to buy, as was the case in Ether.

The sharp rally of the past few days had pushed the RSI into deeply overbought levels. This resulted in profit booking on February 15 that dragged the price back to the previous resistance turned support of \$239.

Currently, the price has bounced off \$239 on February 16 and 17, which is a positive sign. If the bulls can push the price above \$290, the uptrend will resume. The next level to watch on the upside is \$318.60. Our bullish view will be invalidated if the price turns down and breaks below \$239.45.

RIPPLE - XRP/USD

The bulls pushed the price above the overhead resistance at \$0.31533 on February 13, which completed a rounding bottom pattern. However, the bulls could not sustain the breakout and the price again dipped back below \$0.31533 on February 15.

Currently, the bulls are attempting to defend the support at the 20-day EMA. If the altcoin bounces off this support, the bulls will once again try to push the price above the overhead resistance zone of \$0.31533 to \$0.34639.

If successful, the uptrend will resume. The next level to watch on the upside is \$0.45466, which is the pattern target of the rounding bottom pattern. Our bullish view will be invalidated if XRP drops below \$0.26.

The first blockchain-based energy token from an energy supply company

BITCOIN CASH - BCH/USD

COINBASE:BCHUSD, D 412.61 ▼ -0.39 (-0.09%) O:413.00 H:418.00 L:400.81 C:412.61

The bulls carried Bitcoin Cash to \$497.53 on February 14, which was just below the target objective of \$500. The rally had pushed the RSI deep into the overbought territory, which attracted profit booking.

Vertical rallies usually have sharp pullbacks. That is what happened with Bitcoin Cash as it dropped from a high of \$496 on February 15 to a low of \$367.77 on February 17, a drop of 25.85%.

Currently, the bulls are aggressively defending the support at \$361.67. If they can push the price above the 20-day EMA, the altcoin can move up to \$500 once again. The 20-day EMA has flattened out and the RSI has dropped to the midpoint, which suggests a few days of range-bound action.

The uptrend will resume on a break above \$500 while the bears will have the upper hand if the price dips below the 50-day SMA. As the range is large, it can be traded by buying at the support and selling at the resistance.

Cryptocurrency Trading Platform

BITCOIN SV - BSV/USD

BITFINEX:BSVUSD, D 319.060 ▲ +6.990 (+2.24%) O:312.460 H:326.800 L:303.420 C:319.060

Bitcoin SV turned down from \$382.47 on February 13 and broke below the support at \$337.80 on February 15. This led to the liquidation of long positions by the aggressive bulls who had purchased on a break above \$337.80 expecting the altcoin to hit a new high once again.

However, on the downside, the altcoin found support close to the 50-day SMA. Currently, the bulls have pushed the price back above the 20-day EMA. If the price rises above \$337.80, the bulls will once again attempt to resume the up move. A break above \$382.47 will be the first indication that bulls have the upper hand.

However, if the price turns down from \$337.80, a few days of range-bound action is likely. The altcoin will turn negative on a break below the \$236 to \$255.62 support zone.

ADVANCEMENTS IN THE CRYPTOCURRENCY WORLD

Ripple to Become the Amazon of Crypto By 2025: Brad Garlinghouse

Brad Garlinghouse, CEO of Ripple took to the airwaves and spoke with CNN's Julia Chatterly about the current state of Ripple, XRP, and the company's plans for 2020. Garlinghouse concluded that in 5 years, Ripple wants to become the Amazon of the crypto industry.

RIPPLE GREW DURING BEAR MARKET, OTHER BLOCKCHAIN PROJECTS HAD LAYOFFS

Brad Garlinghouse was interviewed by CNN's Julia Chatterly, this morning, and spoke about the state of Ripple, and its future plans. The Ripple CEO sees Ripple and XRP as doing very good currently, although he doesn't pay much attention to short term price action.

Garlinghouse views his company from a much longer-term standpoint. He compared the nascent crypto-markets with a couple hundred billion dollar valuation to markets like gold which are many trillions, comparatively.

One Million UEFA Tickets to Be Distributed Via Blockchain in 2020

Soccer fans in Europe will join the ranks of early blockchain adopters thanks to a new initiative by the Union of European Football Associations (UEFA).

According to a Feb. 17 announcement, UEFA will distribute over one million soccer match tickets via a blockchain-enabled mobile application. The organization claims that this new ticketing system will make “entry into the stadium smooth, safe and secure.”

The new blockchain-based mobile ticketing solution is meant to prevent the duplication and replication of tickets by “QR codes only being activated by Bluetooth once fans are in close proximity to the stadium.” The app will be available for download toward the end of May for both Android and iOS devices.

Tickets will be delivered no later than seven days before the match and “UEFA expects to deliver over one million mobile tickets to fans across all 51 matches.” UEFA decided to adopt this system in an attempt to facilitate ticket distribution to what is expected to be the most in-demand UEFA cup ever.

India's Citizens Will Vote With Blockchain, Election Commissioner Says

India's citizens will soon be able to cast votes from outside their city of registration thanks to a blockchain-based system.

According to The Times of India on Feb. 13, India's Chief Election Commissioner Sunil Arora said that the country hopes to increase voter turnout with a blockchain-based voting solution.

Using blockchain to prevent "lost votes"

Arora said that, in the 2019 elections, 300 million eligible voters did not vote because they were either not politically engaged or were far from where their registered voting district on election day.

The Times of India states that the country has over 450 million migrants that move for work, education, or marriage, but may only do so temporarily, leading most to not bother with re-registering in a new district.

The commissioner said that regulators are collaborating with the Indian Institute of Technology to develop a blockchain system that would allow citizens to vote remotely.

Arora said that he hopes the blockchain voting system will be put in place during his tenure, which ends in April 2021, adding that there is a proposal pending with the ministry of law to link voter IDs and citizen ID system Aadhaar.

China Shows Why Bitcoin (BTC) Is Important by Quarantining Its Banknotes

In a move to prevent the spread of the deadly coronavirus, China has decided to sanitize its old banknotes, Bloomberg reports.

According to many crypto proponents, China putting its money under quarantine is one of the many reasons why the world needs Bitcoin (BTC), a decentralized and permissionless cryptocurrency.

Bitcoin fixes this

Stacy Herbert, a television presenter who co-hosts 'Keiser Report' together with early Bitcoin (BTC) adopter Max Keiser, tweeted that Bitcoin "doesn't get quarantined" when commenting on the news.

Even though businesses are not allowed to refuse banknotes, China is steadfastly turning into a cashless society. Younger generations prefer mobile payments that are controlled by the duopoly of Alipay and WeChat Pay.

Adel de Meyer, the co-founder of DAPS Coin, tweeted that it is necessary to get rid of the middle-man in the era of digitalization. Apart from BTC, there are also privacy coins such as Monero (XMR) and Zcash (ZEC).

Binance will soon be launching a digital asset trading platform that can be rebranded by smaller exchanges for their local markets

Binance will soon be launching a digital asset trading platform that can be rebranded by smaller exchanges for their local markets.

Binance Cloud will offer local exchanges spot market and futures trading, as well as local bank API integrations and peer-to-peer (P2P) fiat-to-cryptocurrency exchange services, the company will say in a statement this week.

Implementing a product like Binance Cloud would relieve potential exchange operators of the software burdens involved in security and scalability. That gives them more time to worry about, say, getting the proper licenses and registrations in their jurisdiction.

Binance Cloud will offer the matching engine, security controls and liquidity of the main Binance.com exchange. So while an exchange may have its own branding and local fiat currency, the back end will basically be Binance itself, which will bring the benefit of more liquidity, albeit indirectly, and potentially in places where Binance doesn't currently operate.

"The Binance Cloud service is an all-in-one solution, featuring an easy-to-use dashboard that allows customers to manage funds, trading pairs and coin listings, as well as multilingual support, depth-sharing with the Binance.com global exchange, and more opportunities to collaborate with the ecosystem," the company said.

Bitcoin outpaces Apple and other smartphone stocks

In the last year, publicly traded smartphone manufacturers like Apple, Google and Samsung have exploded in value, with many reaching their highest market capitalization ever.

However, though impressive, their growth was dwarfed by that of the cryptocurrency sector, as Bitcoin (BTC) and altcoins recovered from a major downturn seen in early 2019.

Bitcoin takes a bite out of Apple

According to data provided by online wallet provider and Ethereum exchange platform Luno, four of the top five publicly traded mobile companies have accrued major gains in the last year.

As it stands, Apple (AAPL) is the best performing publicly traded mobile company, with its stock price increasing by more than 90% between February 2019 and February 2020. Likewise, both Google (GOOGL) and Samsung (SMSN) have also seen impressive gains in the past year as their share prices improved by over 30% during this same period.

That momentum doesn't appear to have been adversely affected by the GSMA's recent decision to cancel this year's Mobile World Congress. The trade show, a major event in the tech industry calendar, was cancelled over concerns surrounding the novel coronavirus outbreak that has infected more than 70,000 people worldwide.

Central Bank of Russia Proposes Amendments To Legal Framework for Tokenization

The proposed cryptocurrency legislation in Russia could change a lot, now that a new bill for tokenization has been filed.

On February 17, the Central Bank of Russia (CBR) has made the announcement that it has completed a blockchain tokenization pilot program. Furthermore, the bank proposed that the digital assets law in Russia to be more accommodating for tokenization platforms.

The CBR Platform Offering New Investment Options

Open to all organizations, the CBR platform allows users to issue a basket of assets-backed hybrid tokens. The technology it uses is believed to expand financing opportunities for businesses, all while offering new investment opportunities. Ivan Zimin, the head for the CBR's fintech division said, the project is one of the biggest sandbox-backed ones in the country. He was very excited about offering the option of hybrid tokens' issuing because he believes these can adapt more rapidly to the users and businesses' demands.

The Platform Was Developed by Nornickel

Nornickel is one of the world's biggest mining companies and the company that has developed the CBR platform. It had previously created another platform for tokenizing palladium and started in December 2019 to test a digital asset trading one. When it comes to its stand on cryptocurrency, the Russian government is quite contradictory. Back in 2018, the country's parliament started working on a bill meant to regulate how digital assets are being used. However, the acceptance of the bill has been many times postponed, remaining to be re-addressed until this month.

Massive Cryptocurrency Treasure Hunt Set to Kick Off in Blockchain-based Virtual World

The cryptosphere is gearing up for the launch of Decentraland, the first-ever blockchain-based virtual world promising a massive crypto treasure hunt. Gamers who create an avatar will be able to enter the metaverse on Thursday, February 20, and join a four-day event where participants can explore Genesis City, a virtual world, and collect unique non-fungible tokens from a host of crypto partners.

According to the team's announcement,

"For four days the public will scour Genesis City for NFTs, tokens, and loot redeemable for real-world products."

The team at Decentraland says the launch represents the culmination of over two years of development. The fully tokenized economy, which runs on the MANA cryptocurrency, allows people to build 3D content and virtual scenes – from hyno wheels to hummingbirds – bridging the world of crypto, gaming and virtual assets.

Decentraland says its mission is to create a virtual world that is fully decentralized and owned by the community. It leverages cryptocurrency to power its Ethereum-based platform, creating a new economy for players, brands and studios that can build and interact with 3D content. A finite supply of virtual parcels of land, represented by a non-fungible LAND token, allows users to create and manage assets and engage in experiences in their own digital space.

Bitcoin Will Surge to \$400K — Max Keiser Quadruples BTC Price Forecast

Bitcoin (BTC) is going to hit a giant \$400,000, celebrated TV host Max Keiser has said as he raises his price target for the first time since 2012.

Speaking on news information show Infowars on Feb. 17, Keiser told host Alex Jones that his old prediction of \$100,000 was now too conservative.

He told the show:

“I am officially raising my target for Bitcoin — and I first made this prediction when it was \$1, I said this could go to \$100,000 — I’m raising my official target for the first time in eight years, I’m raising it to \$400,000.”

Keiser was speaking as coronavirus continued to overshadow global markets and Bitcoin traded lower on the day at below \$10,000.

Unfazed by short-term volatility, he said the largest cryptocurrency was “equally as attractive” at current levels as it was at the time of his original forecast.

“The good news... is that Bitcoin at \$10,000 or \$9,300 is equally as attractive as it was when it was \$100,” he explained.

Bittrex moves \$500 million in Bitcoin for just \$1

Crypto exchange Bittrex has just made two large Bitcoin (BTC) transactions, moving coins from its main exchange to another wallet, before sending them back to its original wallet. And it barely paid anything to do so.

Earlier today, the exchange moved 48,952 BTC, worth \$491 million at the time, according to blockchain records—first pointed out by Whale Alert on Twitter.

But despite these two huge transactions, the cost was minimal. The exchange paid \$0.67 in fees for the first transaction, and \$0.84 for the second—a combined total of just \$1.51.

It's likely the exchange was just reconfiguring its cold wallets, where it stores the majority of its customers's Bitcoin offline.

This isn't the first time the exchange has made such large Bitcoin transactions. Back in December, \$9 billion in Bitcoin was moved in one hour, mostly due to a series of transactions that Bittrex made.

In September, there was a huge consolidation of Bitcoin into one address. A collection of large-scale Bitcoin owners—known as whales—moved 94,504 Bitcoin, worth over \$1 billion, to an unknown wallet. That's over 0.5% of all coins in circulation. This was the same day that futures exchange Bakkt launched its custody service—but it would not comment on the transaction.

PLATINUM PROJECT INFORMATION

EDCON

EDCON 2020

Project Details:

EDCON (Community Ethereum Development Conference) is a non-profit global Ethereum conference that happens once a year in different countries, and it is mainly committed to serving the Ethereum ecosystem, boosting the communication and interaction of Ethereum communities worldwide. EDCON is a community-supported event initiated by [LinkTime](#), and with the spirit of sharing and mutual growth, it received strong support from Ethereum Foundation, various communities, and many other contributors in this space, as is manifest in [EDCON2017-Paris](#), [EDCON2018-Toronto](#), and [EDCON2019-Sydney](#). Together with the help of our supporters, EDCON has made a large influence in its previous years, and we hope this year's event will be even more significant.

Realizing that there is an increasing number of people beginning to study and research crypto economics deeper than ever before, we can see the significance and necessity of crypto economics to the blockchain space. Thus this time, apart from the topics of Ethereum technology updates, business use case, investment, governance, community building, etc., the "Renaissance of Crypto-economics" will be included as an important slogan. You will hear more voices about Crypto-economics at EDCON2020.

EDCON Week Confirmed Sub-conference Brief:

Regarding sub-conference of EDCON2020, so far we updated 15 topics:

- Superdemo-Dapp Competition,register here.
- Data Driven Cryptoeconomics
- IoT & Blockchain & Tokens & UX & Economy!
- Staking Symposium
- DAOs and Decentralized Governance
- Eth2.0 Client Development
- How to Write Ethereum Smart Contracts
- Presentation and Discussion of Radical Markets
- New Development in DeFi
- Cryptocurrency Adaptation in Developing Countries
- DAOcanvas.io / DAOfest
- Getting hands dirty with Libp2p!
- Synthetic Tokens and the Future of Defi
- ETH2 CLIENT SUBCON
- Cross-blockchain and Ethereum

For the Superdemo-Dapp competition, if you have interest to know more and participate in , click here to check detailed information, and for each sub-conference details, check the website to find more: <https://www.edcon.io/>

<p>Superdemo-Dapp Competition</p> <p>EDCON & CryptoChicks 🕒: TBD 📍: Sub-conference room 1 ...</p>	<p>Data Driven Cryptoeconomics</p> <p>Amberdata 🕒: TBD 📍: Sub-conference room 1 ...</p>	<p>IoT & Blockchain & Tokens & UX & Economy!</p> <p>Alphawallet 🕒: TBD 📍: Sub-conference room 1 ...</p>	<p>Staking Symposium</p> <p>stakefish 🕒: TBD 📍: Sub-conference room 1 ...</p>

<p>Synthetic Tokens and the Future of DeFi</p> <p>Regina Cai, UMA 🕒: TBD 📍: Sub-conference room 1 ...</p>	<p>ETH2 CLIENT SUBCON</p> <p>María Paula Fernández... 🕒: TBD 📍: Sub-conference room 1 ...</p>	<p>Cross-blockchain and Ethereum</p> <p>Daniel Karzel, COMIT... 🕒: TBD 📍: Sub-conference room 1 ...</p>	

Main conference speakers and agenda updates:

So far we have confirmed **62 speakers**, including **Vitalik Buterin, Ethereum Founder; Karl Floersch, Hsiao-Wei Wang, Albert Ni, Alex Beresgaszsi, Aditya Asgaonkar, Christian Reitwiessner, Alex Van de Sande, Danny Ryan, Leonardo Alt researchers from Ethereum Foundation**, Vlad Zamfir the CBC casper core researcher. And Arthur Gervais, from Liquidity.Network, Deniz Omer from KyberNetwork, Griff Green from Commons Stack & Giveth; Emin Gün Sirer from AVA Labs; Weiwu Zhang, CTO of AlphaWallet; Shawn Douglass, CEO of Amberdata; Dominik Harz, developer from Imperial College London; Jae-Yun Kim from Seoul National University, and many others, more main conference agenda already conformed and updated to the website.

The speaker registration channel is closed now (there are more than 200 main conference speaker application submissions already), while the sponsor, media supporter, community supporters are still open to apply! Anyone who have interests in sponsoring, now it's time to contact, the sponsor spots are limited availability!

Highlights of EDCON2020:

- Theme of “Renaissance of Crypto-economics”, more voices about cryptoeconomics will be included.
- Topics of ETH2.0 Cryptoeconomics, DeFi, DAO, DApp Investment, Governance Community building, etc.
- Keynotes from Ethereum founder Vitalik Buterin and many other core developers/researchers.
- Panels, Debates, Demos, Workshops, Side events, etc. will happen simultaneously with a total expecting attendees of 20k+.
- Three tracks Superdemo competitions (Business Idea, Prototype, and Working Product.)
- Themed Sub-conferences including Data&Investment, IOT&Ethereum, Staking&Mining, DAOs&Decentralized governance, ETH2.0 Client development, Ethereum Smart Contract training, DeFi new development, etc.
- Artistic Free Crypto Market where you can exchange artworks with cryptocurrencies
- VIP dinner party
- And more

Highlights of EDCON2020:

The early bird ticket was sold out at 12th Feb, currently standard ticket, developer ticket and student ticket are available. To encourage more students join in the tech event, there is a student (budget) ticket open with the price of 10 euros, check to see if you are eligible for cheaper ticket: <https://edcon.io/registration?pay=1>

Buy Ticket

Click the buttons below to buy ticket

Standard ticket € 380 Full 4-day pass, Catering&breaks, Swags.	Developer ticket € 245 Full 4-day pass, Catering&breaks, Swags.	Student ticket € 118 Full 4-day pass, Catering&breaks, Swags.	Student ticket (budget) € 10 Full 4-day pass, Swags.
---	--	--	--

Organizer:

LinkTime is a startup that primarily develops applications on Ethereum and provides Ethereum-based blockchain and smart contract solutions. LinkTime works closely with core Ethereum developers and researchers, and it helps to advance the Ethereum ecosystem through technological development, training and promotions.

HOW ARTIFICIAL INTELLIGENCE HAS REVOLUTIONIZED TRADING

Hi Crypto Network,

Technology has revolutionized everything, and when we talk about technology, we cannot skip Artificial Intelligence (AI). AI is whereby machines simulate human intelligence, such that they are programmed to think and act like humans, but now more efficiently. With AI, machines can also do learning and problem solving just like humans.

BLOCKCHAIN TECHNOLOGY IN THE ENERGY SECTOR

Blockchain technology has revolutionized most industries and the energy industry is not left behind. As much as there have been many innovations of technology in the energy sector such as solar energy, electric vehicles, and smart metering, there is still much more that is yet to happen especially with the rise of blockchain technology. There are no limitations to the blockchain use case. It may be the solution to changing renewable energy standards, better data management, and changing the energy markets among so much more.

HOW AI IS INCREASINGLY USED IN TRADING

AI has been used in many industries including trading. Electronic trades account for almost half of the total revenues from cash equity trading. Most companies such as hedge funds, use AI-powered analysis to get investment ideas and build portfolios.

AI makes it easy to analyze data and execute trades at the best price. Through AI, analysts can be able to forecast markets with more accuracy. It is also easier for traders and exchange firms to efficiently mitigate risks for higher returns.

AI-POWERED TRADING RAISES NEW QUESTIONS

As much as AI has been believed to be the solution to trading technologies, there are still questions about what it can do. When it comes to market prices, it is hard to be predicted by AI as they are mostly random. Prices cannot be predicted as the market is very volatile. That makes machine-learning based predictions not to be very accurate hence may not be the best for automated trading.

That has made traders opt for quant trading strategies such as arbitrage trading and high-frequency trading. They rely on a sequence of predictable behaviors and biases.

HOW PROFITABLE ARE THE BEST STOCK TRADING ALGORITHMS?

Algorithmic trading is whereby you set certain conditions such as price and market conditions and once the preset conditions are met, a computer program automatically trades at high speeds and volume.

A computer program is used to execute the trade as it can do it more efficiently and fast as compared to a human. It can be done at a high frequency and speed that may be impossible to do in person.

The pre-set conditions may be the time, price, quantity, or any other market condition. Algo trading has also been used to increase efficiency as it rules out the possibility of human emotions on the trade, making the market more liquid, and the trading more systematic.

The best stock trading algorithms are more profitable compared to traditional human trading. There are many automated trading strategies in the market and they all come with different price tags. When estimating the returns, do not skip on inflation which is normally a rate of about 2% a year.

It is hard to have all the inside information on the profitable algorithm as most people who have developed one keep it a secret. That explains why most large-scale quantitative investment firms such as Sigma are secretive about their trading algorithms as they take it as their secret sauce. Most of the high performing platforms do not maintain the position no matter how consistent they are because there are always new players that will get into the market.

WHAT IS THE DIFFERENCE BETWEEN AI TRADING AND ALGO TRADING?

Algo trading is whereby a computer program follows a set of instructions set to execute a trade. AI trading, on the other hand, is whereby machine learning is used to observe, study and analyze market conditions, trading patterns, and data, then predict what will happen.

In Algo trading, it is a human who sets the conditions that should be met. With AI, artificial intelligence is used to set conditions after going through different parameters and analyzing them

HOW IS MACHINE LEARNING USED IN FINANCE?

Machine learning has been used for identifying complex trading patterns across different markets in real-time. It takes advantage of its high speed and big data processing power to give real-time updates. That explains why it is used in wall street and the United States in general.

The finance industry has taken advantage of technology to analyze conversions and financial data. That makes it easy to sift through relevant notes and large amounts of data and make market insights in real-time.

Some companies such as Kavout is using the AI system to process data to rank stocks. The company uses AI for pattern recognition and price forecasting so that it can be able to recommend daily top stocks. It uses AI algorithms to make its portfolios.

Machine learning has helped finance companies to come up with algorithmic trading strategies That, has helped to solve investment challenges. It has made it easy to analyze data without necessarily having in-house expertise.

AI trading companies such as Epoque has an AI system that works in three phases, the first is a strategy where observation and analysis of potential trades are done, the second one is where orders are created and the third is where active orders are implemented and machine learning is used to analyze performance.

Machine learning has been used by investment companies for coming up with strategies such as intelligent asset allocation for deep learning and prediction of different assets of a particular portfolio.

Machine learning has been used for creating a fully autonomous stock trading system without requiring any updates or adjustments.

HOW TO START WITH ALGORITHMIC TRADING USING MACHINE LEARNING?

For starters, to do algorithmic trading using machine learning, you need to have coding skills.

Once you know to code, you can then learn on the different machine learning techniques such as classification, clustering, and regression.

When machine learning and algorithmic trading are integrated, you have to set the instructions to the computer and machine learning changes those set conditions according to the market conditions. Even though neural network works, with machine learning you don't have to monitor the conditions to set them for algo-trading.

Machine learning algorithms are therefore the solution to trading. Even though there are not very accurate, they are very accurate especially for making predictions on price movements of stock.

A SOLUTION FOR RETAIL TRADERS – WORLD MARKETS AI MANAGED ACCOUNTS

World markets take advantage of AI in trading as it acknowledges that AI will never be on the same level as human trading. It uses advanced AI trading tools to make sure that trading is highly profitable. It monitors and analyzes many potential trades to explore low-risk opportunities available. You get a trader-operated artificial intelligence managed trading account with over 100% compound return guaranteed regardless of the market condition.

Digital gold:

You can purchase digital gold from the platform or you can get physical gold bars that are held by a licensed institution so that you can easily liquidate for fiat or cryptocurrency.

Gold/silver bullion investment opportunities:

Silver and gold are good investment alternatives as they are more inflation-proof therefore they tend to hold their value over time.

Investment in exotic metals:

There are other exotic metals that one can invest in such as platinum and palladium.

Exchange platform:

World Markets also offers an exchange platform where you can trade your currencies. In addition to that, there is an offer where you are given a free wallet.

Education:

Through the site, you will master your financial literacy and be a financial guru.

Affiliate:

Apart from all other great products the platform has to offer, you can also earn a commission through referrals.

Hopefully, you have enjoyed today's article. Thanks for reading!

Have a fantastic day!

Live from the Platinum Crypto Trading Floor.
