EDITORS

Despite the slight downturn, the institutional adoption of Bitcoin continues to increase. Filings with the United States Securities and Exchange Commission show that four wealth management firms have bought shares in Grayscale's Bitcoin Investment Trust.

A survey of about 42,000 people in 27 countries by product comparison website Finder showed a high adoption rate in Asia. Among the countries polled, Vietnam had the highest adoption rate at 41%, while India and Indonesia had a 30% adoption rate.

LETTER

The crypto markets will take a huge regulatory leap on Tuesday when the first Bitcoin-linked exchange-traded fund by ProShares, which tracks Bitcoin futures, will start trading on the NYSE under the ticker BITO.

Bitcoin soared above the £42,653.53 resistance on October 15, clearing the path for a retest of the all-time high at £47,240.05.

The rising 20-day exponential moving average (EMA) and the relative strength index (RSI) in the overbought zone indicate that bulls are in the driver's seat.

If buyers push the price above £47,240.05, the BTC/GBP pair could start its northward journey toward the 1.618% Fibonacci extension level at £56,174.25.

Conversely, if the price turns down from £47,240.05, the first support to watch on the downside is £42,653.53. If bulls defend this level successfully, the pair may consolidate between the two levels for a few days.

A consolidation near the all-time high is a positive sign as it shows that traders are not rushing to the exit. That could increase the prospects of the continuation of the uptrend.

The first sign of weakness will be a break and close below the 20-day EMA. Such a move will suggest that supply exceeds demand and the sentiment could be turning negative. A break and close below the 20-day EMA could pull the price down to £38,257.06.

Lastly please check out the advancement's happening in the cryptocurrency world.

Enjoy the issue!

WEEKLY CRYPTOCURRENCY MARKET ANALYSIS

Hello, welcome to this week's 204th edition of Cryptonaire Weekly Magazine. The global crypto market cap is \$2.51 Trillion, up \$210 billion since the last week. The total crypto market trading volume over the last 24 hours has increased by 13.19% to \$99.80 Billion. The DeFi volume is \$10.54 Billion, 10.56% of the entire crypto market's 24-hour trading volume. The volume of all stable coins is \$78.96 Billion, 79.12% of the total crypto market's 24-hour trading volume.

Bitcoin's price has increased 10.47% from \$56,760 last week to around \$62,700 and Ether's price has increased 9.89% from \$3,490 last week to \$3,835. Bitcoin's market cap is \$1.18 Trillion and the altcoin market cap is \$1.33 Trillion.

The crypto markets will take a huge regulatory leap on Tuesday when the first Bitcoin-linked exchange-traded fund by ProShares, which tracks Bitcoin futures, will start trading on the NYSE under the ticker BITO.

While some market participants believe the Bitcoin ETF could be the trigger that could take Bitcoin to a new all-time high, others believe that the event could mark a short-term top, as was the case following the launch of CME Bitcoin futures in 2017 and the Coinbase listing earlier this year.

CNBC's Jim Cramer is in the camp which believes that a correction could be possible following the launch of the Bitcoin ETF, hence he sold one-eighth of his holdings in Ether. "Cryptocurrencies, they've become unstoppable, and even as someone who likes them, I think they've become the definition of rank speculation," Cramer said.

On the other hand, Fundstrat Global Advisors co-founder Tom Lee believes that "Bitcoin demand will exceed the inflows for QQQ." The analysts at Fundstrat anticipate Bitcoin to surge to \$168,000 if ProShares attracts strong inflows from investors.

Percentage of Total Market Capitalization (Dominance)

Bitcoin	47.08%
Ethereum	18.02%
Binance Coin	3.30%
Cardano	2.82%
Tether	2.75%
XRP	2.05%
Solana	1.90%
Polkadot	1.44%
Dogecoin	1.64%
USD Coin	1.33%
Others	18.33%

CRYPTO TRADE OPPORTUNITIES

BITCOIN - BTC/GBP

Bitcoin soared above the £42,653.53 resistance on October 15, clearing the path for a retest of the all-time high at £47,240.05. The rising 20-day exponential moving average (EMA) and the relative strength index (RSI) in the overbought zone indicate that bulls are in the driver's seat.

If buyers push the price above £47,240.05, the BTC/GBP pair could start its northward journey toward the 1.618% Fibonacci extension level at £56,174.25.

Conversely, if the price turns down from £47,240.05, the first support to watch on the downside is £42,653.53. If bulls defend this level successfully, the pair may consolidate between the two levels for a few days. A consolidation near the all-time high is a

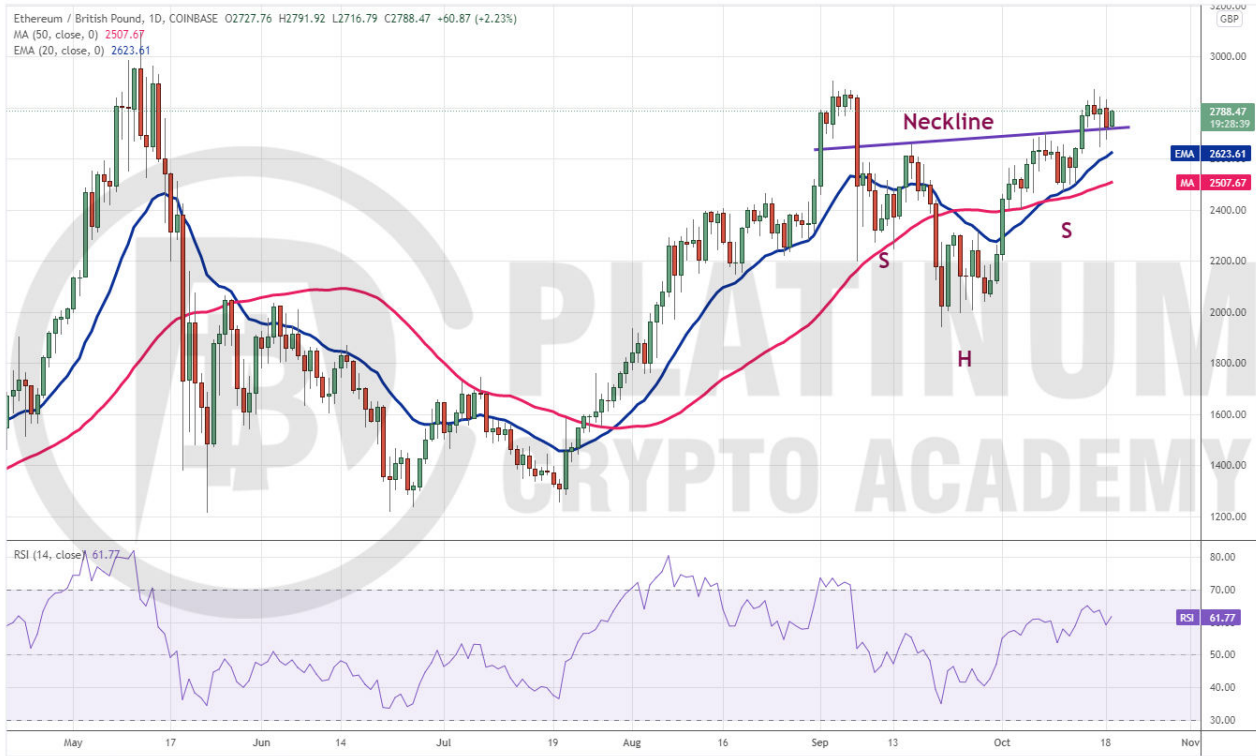

positive sign as it shows that traders are not rushing to the exit. That could increase the prospects of the continuation of the uptrend.

The first sign of weakness will be a break and close below the 20-day EMA. Such a move will suggest that supply exceeds demand and the sentiment could be turning negative. A break and close below the 20-day EMA could pull the price down to £38,257.06.

We are not confident that the price will sustain after making a new all-time high, hence we are not proposing any trades.

[Previous Analysis...](#)

ETHEREUM - ETH/GBP

Ether broke above the neckline on October 14, completing a bullish inverse head and shoulders pattern.

However, as we had projected in our previous analysis, the bears aggressively defended the overhead resistance at £2,905.65 and have pulled the price back to the neckline.

A minor positive is that bulls have held the neckline on a closing basis. The rising moving averages and the RSI above 61, suggest that bulls have the upper hand.

If bulls drive the price above £2,905.65, the ETH/GBP pair could retest the all-time high at £3,098.17. A break and close above this resistance could open the doors for a rally

to the pattern target of £3,350.

Alternatively, if the price turns down from the current level or the overhead resistance and plummets below the moving averages, it will suggest the start of a deeper correction to £2,312 and later to £2,000.

[Previous Analysis...](#)

RIPPLE - XRP/GBP

The bulls bought the dip to the 20-day EMA on October 13 but they could not push the price above the overhead resistance at £0.8924. This suggests that demand dries up at higher levels.

The price turned down from £0.8468 on October 16 and bears pulled the price back below the moving averages on October 17.

A minor positive is that the bulls aggressively bought the dip as seen from the long tail on the day's candlestick.

Both moving averages are flat and the RSI is near the midpoint, indicating a balance between supply and demand.

This equilibrium could tilt in favour of the bears if the price slides below £0.7310. The pair could then drop to £0.6334. Conversely, a break above £0.8924 could open the doors for a rise to £1.0156.

Contrary to this assumption, if the price rebounds off the current level, the bulls will attempt to push the price above £0.8924 and start a rally toward the stiff overhead resistance zone at £1.0156

[Previous Analysis...](#)

CARDANO - ADA/GBP

Cardano has been struggling to rise above the 20-day EMA for the past few days, which suggests that traders are selling on rallies to this level.

The 20-day EMA is sloping down marginally and the RSI is in the negative zone, indicating an advantage to bears.

If sellers pull the price below £1.49, the ADA/GBP pair could drop to the £1.40 to £1.33 support zone.

Contrary to this assumption, if the price rises

from the current level and breaks above the 20-day EMA, it will suggest that the selling pressure could be reducing. The bulls will then attempt to propel the price above the overhead resistance at £1.75137.

If they manage to do that, the pair could rally to £2 but if the price turns down from £1.75137, a few more days of range-bound action is possible.

[Previous Analysis...](#)

BINANCE - BNB/GBP

We had mentioned in the previous analysis that Binance Coin could start a deeper correction if bears sink the price below the £292 to £284 support zone but the bulls were in no mood to relent.

The BNB/GBP pair reversed sharply from £286.80 on October 12 and rose above the moving averages.

The pair could now rally to the overhead resistance at £377 where bears may again mount a stiff resistance.

The rising 20-day EMA and the RSI above 66 indicate that bulls are in control.

If bulls do not give up much ground from this resistance, the possibility of a break above

£377 increases. If that happens, the pair could rally to £400 and then to £438.

On the other hand, if the price turns down from £377 and breaks below the 20-day EMA, the pair could again drop to £286.80.

MANDALA EXCHANGE POWERED BY BINANCE CLOUD

“The team at [Mandala Exchange](#) is extremely honored to be a part of the Platinum Crypto Academy community. At Mandala Exchange we value community first, above all. We are excited to join such a thriving ecosystem, and share in the education, progression, and adoption of such a powerful industry.” Quote from their CEO.

Mandala is the first privately owned exchange powered by the Binance Cloud platform. Mandala aims to be the most trusted digital asset exchange in a crowded market sector. Mandala allows users to trade cryptocurrency with confidence on an industry-leading exchange platform with access to the largest liquidity pool in the world and fees as low as 0.05%. Mandala currently has over 1,000+ active trading pairs with full Binance liquidity and security, making Mandala one of the largest exchanges on the market today.

Aside from sharing the deepest liquidity pool in crypto with Binance, there are some major differentiators that have led traders flocking to Mandala. Recently, Binance reconfigured their KYC policies, leaving those who wish to remain anonymous out to dry. Although Mandala is powered by Binance Cloud, being privately owned, Mandala is not required to conform to the same regulatory landscape that Binance has put in place. Traders on Mandala can enjoy no KYC up to 2 BTC per day while still taking full advantage of the Binance ecosystem (trading pairs, lowest trading fees, deep liquidity, SAFU Funds). Additionally, Mandala and Binance share wallet architecture, allowing traders to transfer their portfolios to Mandala without incurring a withdrawal

fee.

We encourage the PCA community to explore what our exchange has to offer. We are here to answer any and all questions you may have about our native token (\$MDX), our roadmap, our team, and most importantly...our community! So come join us on our [Discord](#) and [Telegram](#).

[Sign up on Mandala here and get 5% back on your trading fees](#)

Commenting on the potential of the Mandala Exchange project Editor in Chief at Cryptonaire Weekly Mr. [Karnav Shah](#) said: “Mandala Exchange is enabling their users to experience better trading depth, security and transaction speeds. We are pleased to discuss this important project and hope to share more about its journey in the coming weeks.”

ADVANCEMENTS IN THE CRYPTOCURRENCY WORLD

OPENSEA KILLER, COINBASE NFT MARKETPLACE, SEES 'INSANE' INTEREST, OVER 1 MILLION USERS SIGN-UP ON THE WAITLIST

In a matter of 24 hours, Coinbase's NFT marketplace has garnered an extremely positive response.

"We are getting a LOT of signups – so grateful for all your interest," Coinbase vice president of product Sanchan Saxena wrote on Twitter.

"We are seeing insane loads on our servers and our team is working hard to get this resolved."

The yet-to-be-launched marketplace for NFTs saw more than one million sign-ups on its waitlist on the very first day it opened, reported Bloomberg citing a person familiar with the situation.

In August, Coinbase had said that its customer usage had slowed at the start of the third quarter due to the crypto prices going down

and that in response, it is seeking to diversify its revenue. NFT marketplace is the move in that direction.

"Fees are more likely to mirror retail than institutional crypto-trading commissions," wrote Bloomberg Intelligence's senior fintech analyst Julie Chariell in a report.

"NFT trading at our 3% fee estimate would bring much more revenue per trading dollar, along with less volatility to Coinbase operations than the crypto trading platform."

While some of the signups could be duplicates and spam, it is extremely clear that Coinbase's NFT extension has become a hot topic already. These numbers will beat the popular marketplace OpenSea very easily.

Crypto finserv firm Bakkt to soon trade publicly on New York Stock Exchange

Bakkt Holdings, the digital assets management arm of Intercontinental Exchange (ICE), has announced it will soon become a publicly traded company on the New York Stock Exchange, starting Oct. 18.

The public listing for Bakkt comes as a result of a merger with VPC Impact Acquisition Holdings, a Chicago-based special purpose acquisition company. According to an official statement, a shareholders meeting regarding the merger saw approximately 85.1% approval for the business combination:

“Upon closing, the combined company’s Class A common stock and warrants are expected to begin trading on the New York Stock Exchange (“NYSE”) under the ticker symbols “BKKT” and “BKKT WS” respectively.”

Additionally, the business combination resulted in gross proceeds of approximately \$448 million to Bakkt, which it plans to reinvest in growing the company’s capabilities and partnerships.

Just last week, Bakkt announced a partnership with Google to allow the purchase of goods and services using Bitcoin (BTC) and other cryptocurrencies via the Google Pay platform. According to Bakkt CEO Gavin Michael, the partnership “is a testament to Bakkt’s strong position in the digital asset marketplace, to empower consumers to enjoy their digital assets in a real-time, secure, reliable manner.”

SEC Approves Bitcoin Futures ETF, Opening Crypto to Wider Investor Base

After years of trial and error by would-be fund sponsors, cryptocurrency investing is finally opening up to the masses with the tacit U.S. approval of a bitcoin futures exchange-traded fund.

The Securities and Exchange Commission (SEC) greenlighted bitcoin futures ETFs in a first for the industry on Friday, after the regulator’s five commissioners met on the issue. ProShares, which filed for its Bitcoin Strategy ETF this past summer, may be the first to launch next week.

The company filed a post-effective amended prospectus on Oct. 15, stating its filing is expected to launch on Monday, Oct. 18, though the fund may not begin trading immediately.

Proponents of a bitcoin ETF believe the product will be more widely accessible for individuals interested in bitcoin than the actual cryptocurrency by giving investors a regulated alternative to the underlying digital asset. The first product will track bitcoin futures, rather than the price of bitcoin directly, however. SEC Chair Gary Gensler indicated he believes futures-based products might provide stronger investor protections due to the laws under which they operate.

The SEC has, in the past, explicitly rejected bitcoin ETF applications, but it does not need to formally approve one. Under federal law, the SEC can just allow an application to become effective, rather than make a formal announcement.

[Read more...](#)

ARTEX, THE FIRST BLOCKCHAIN BASED MARKETPLACE FOR SELLING AND INVESTING IN ARTWORK

The 'Mona Lisa' painting has been the talk of the art world since the 16th century, with its value going to heights that not many people predicted. However, the art industry has grown and gained relevance in the investment sector. Who would have thought that there would come a time when fine art would be linked to one of the most outstanding yet controversial technologies, blockchain tech? This venture is attracting crypto investors into the art industry, thus widening the industry's target gap.

Individuals and artists alike are looking to showcase their pieces of art to the wider target market, allowing you and other art enthusiasts to appreciate unique pieces. Artwork has been a controversial field over time, with cases of forgery, failure of ownership, as well as a lack of transparency. Such concerns have pulled down the arts industry, with different people taking credit for other artists' pieces of art. To help curb the existence of such concerns, the emergence of blockchain-based investment platforms focusing on fine art are providing long-term solutions for the art industry.

WHAT IS ARTEX?

Artex, a blockchain-based art piece exchange platform, is the first and only platform of its kind, serving as an acquisition platform to make the art market less elitist. The key objective is to allow individuals to participate in the state-of-the-art works all the time (24 hours a day), with any amount, as well as with ease of asset management, thus serving as an investment platform. This platform also offers insurance on pieces of art based on transparent pricing. On the Ethereum blockchain, Artex employs

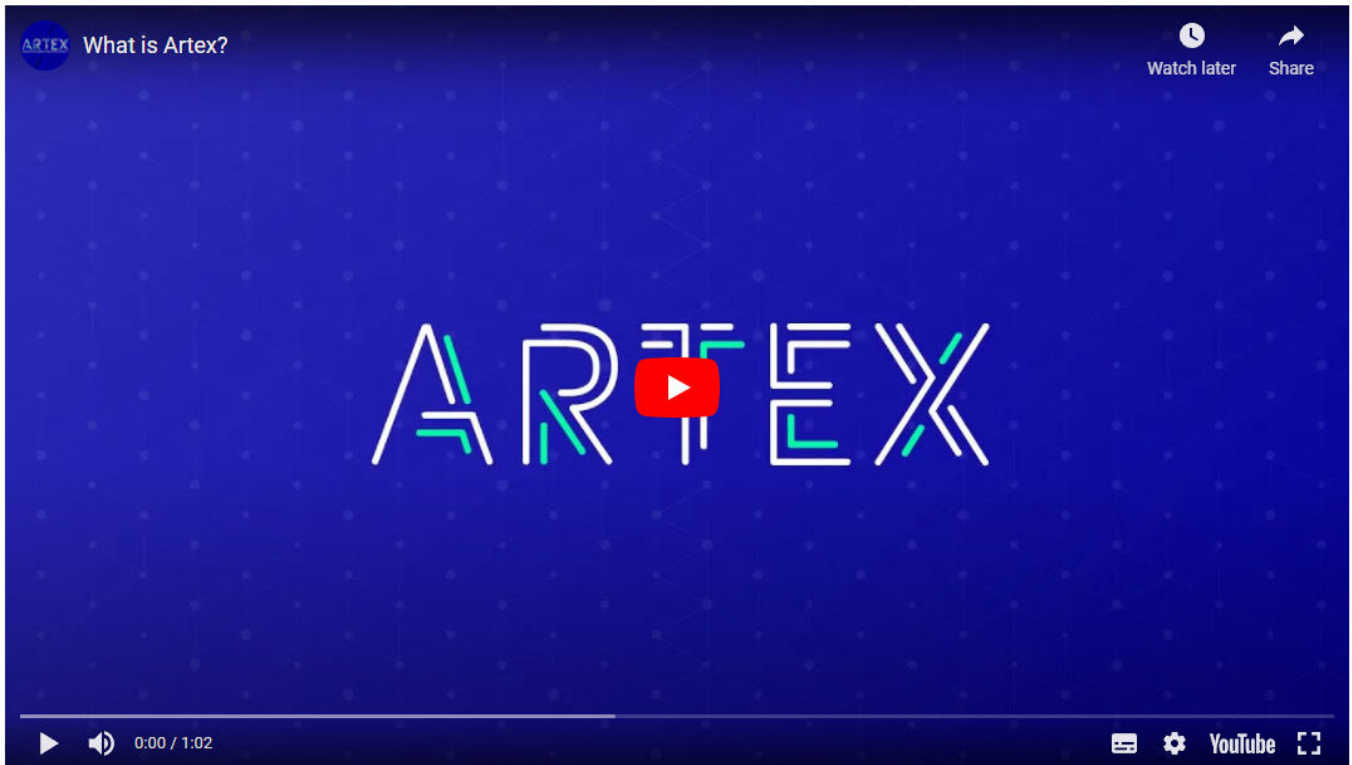

blockchain to help record the provenance of artworks. This record will include the transactions history, as well as available art critiques. The launch of its mobile application seeks to embrace not only the elite persons (art dealers or art experts) in the art field, but also embracing the upcoming artists. The platform's key objective is to connect and unite dealers, photographers, collectors, galleries, art critics, and investors, all in a single platform.

Pricing of art pieces is done by renowned art experts in the field to ensure that art enthusiasts and investors obtain value for their interest. The experts are active from different countries to promote transparency, as well as gain favour with a wider range of its target market. The artwork is tokenised on the blockchain in accordance to its appraised value, allowing individuals to buy and sell the amount of art works participation listed, as well as the pre-sale process.

This platform allows individuals to trade as well as manage fine art investments at their fingertips at all times. Gone are the days when making money from fine art is limited for the chosen few who are privileged in the industry. Thanks to Artex's smart contracts, individuals and investors can buy and sell any amount they wish to from works that are listed during the pre-sale process. The Artex platform has 4 major objectives:

- To provide liquidity to the art market

Fine art is often an illiquid asset, despite owning several investment qualities, especially when they

are just collected, without being securitised or diversified. The Artex platform offers liquidity features that will make it easy to provide liquidity in the market.

– Promote transparency, thus supporting artist rights

For any market to be successful, there must be a healthy relationship and transparency between the seller and the client. The art market is arguably one of the least regulated yet legal big-budget markets. To address this concern, Artex functions under blockchain technology to promote transparency, while at the same time, eliminating the need of intermediaries. When looking at transparency in art, we are looking at aspects such as:

- Clarity in pricing and value of the artwork
- Terms of purchasing
- History of the art piece
- Consumer claims

The concept of transparency will address concerns such as distribution or availability of fakes or forgeries and looting of antiques.

– Offer a democratic distribution channel of finance in the art market

Artex offers an investment platform that allows

for equality among individuals and investors. The platform will address principles such as individual rights, provide check and balance, as well as freedom of participation.

– Operates a crypto exchange based on an asset/commodity

Initially, many individuals have to pay in fiat currency, even for a crypto investor. This gesture has been restrictive for many crypto enthusiasts. Artex has closed this gap by introducing a crypto exchange based on artwork as the asset. Crypto investors can widen their portfolio coverage, considering that this investment platform allows individuals to easily trade in fine art with cryptocurrency.

WHAT ARE TRADITIONAL METHODS OF SELLING ARTWORKS?

Traditionally, selling of artwork including paintings and sculptures is ongoing without much benefit to the artists. This is because of the presence of intermediaries. As such, you will find art galleries that help individuals to showcase their artwork. There are different forms of art, and artists need to identify their target market. By identifying the target market, artists are able to acknowledge which is the best way to sell your art without compromising on its value. Traditionally, there are different methods that people are using to sell artworks.

– Galleries

Art galleries promote diversity because they

can incorporate different genres of art. When considering galleries, you will have two options to work with. Artists can sell their art directly to the gallery management or you can choose to sell on a commission basis. When the gallery buys a piece upfront, artists agree on the art's value and settle with the artist as a one-off payment. Alternatively, commission sales works from agreeing to display the artwork in the gallery for a specific period, and if it is sold, the two parties split the sales as agreed. The limitation to this method is the income split.

- Auctions

Auctioneers are a method of selling artwork in cases where professionals bid for the right price. It is a method that has been in existence for a long time. Art enthusiasts come together and bid on the art. However, this method is ideal for well-known art pieces or pieces from renowned artists, so that buyers can compete to purchase the artwork.

- Collectors

Art enthusiasts may come in handy when seeking to sell artwork. Art collectors buy artwork pieces that are unique. This especially works for painting. Collectors are willing to pay for paintings of high value to ensure that they retain its value.

- Online/Social media platforms

The advancement of technology is allowing individuals to display their artwork online, thus reaching out to a wider target market. There are several websites online that users can use to showcase their pieces. Some websites are specific to the type of art they market, making it easier to reach out to their target market.

- Networking

Networking refers to selling of your art through the use of other artists or art enthusiasts who have the right connections in the market. This is why artists are linking together to support each other's efforts in the industry.

While the above methods for selling art are applicable, they come with challenges such as intermediary concerns, a lack of transparency, artist concerns over low pay, as well as forgery. In this, there is a gap that current methods of selling art need to close to boost better experiences.

HOW DOES ARTEX EMPOWER THE FUTURE OF FINE ARTS?

Artex features a working model that is in line with asset owners, galleries, artists, and auctioneers to outline their common interests. The platform

model and functionality seeks to deliver on liquidity, transparency, security, as well as easier and faster access of fine art in the market. This platform is paving a way for a democratic means of art investment. Serving as an investment platform, Artex empowers the future of fine arts, not only through greater communication and marketing, but also through bettering financial standards. The use cases in which Artex will empower the future of fine arts are as follows:

- Democratising art investment

Crypto investors can now invest in fine art, and while many individuals initially had to purchase an entire painting or sculpture, investors can now own a section of a piece of art. This gesture is making it possible for more individuals to invest in the art industry. Rare fine art pieces are limited because there are very few in the industry. However, it is currently possible for more crypto investors to come together and invest in fine art. To meet this objective, Artex is tokenising art to enable more individuals and not just the ultra-rich to invest in art. By tokenising art, people can invest in segments when buying art. For example, if a piece of art is going for \$40,000 in the market, an investor can come in and purchase the value worth up to \$15,000 and allow others to purchase it until its full value is arrived at.

- Presence of a decentralised art exchange

Introducing decentralised art exchanges such as Artex places a key focus on the art industry. Whereas buying and selling of art on online platforms has been evident, the growth rate has been rather slow. On the other hand, exchanges have initially placed a focus on the financial industry. However, the presence of art exchanges has led to the widespread of global online art sales. The growth rate of art sales from the use of art exchanges is steady, promising the art future a more globalised and active market, not only for crypto investors but also for art enthusiasts.

- Monetising digital art

Artex, a blockchain-based platform, has the capability to monetise digital art. Digital art ranges from illustrations, text graphics, to videos. Therefore, Artex allows individuals from the art industry to showcase their artworks. Artex features the Artex token, which allows individuals with its ecosystem to easily trade using the token.

- Artwork ownership provenance and authentication

The fear of forgery and buying a fake piece of art at the value of an original can be heart-breaking. To

avoid such cases, it is important to be able to stamp artworks and ensure ownership, while at the same time, being able to identify the chain of ownership. Provenance will describe the chain of ownership, which will go hand in hand with authentication, which proves the authorship of the artworks.

IS ARTEX'S USE OF BLOCKCHAIN REVOLUTIONISING THE INDUSTRY?

Blockchain is revolutionising the functionality of many industries, and the arts industry is no different. While blockchain is evident in the financial sectors, the arts industry is currently tapping into the blockchain capabilities. Artex is revolutionising the arts industry through blockchain in the following ways:

- Guaranteed intellectual property

The platform secures innovations such as copyright through blockchain, thus giving the ability to store intellectual property (in the cloud) and manage the property when needed and from any place. Other than guaranteeing copyright, it also improves transparency, thus reducing cases of forgery in the industry. More artists will want to showcase their pieces without the fear of losing the artwork's value from corrupt dealings.

- Reducing the number of intermediaries

Selling art or finding the right people to work with in the industry can be a challenge when using the traditional methods of selling art. Therefore, individuals need to identify a link they can use to reach out to their target market, thus ending up with several intermediaries before meeting the key objective. With the help of blockchain technology, artists can now eliminate the need for intermediaries because Artex offers a platform that links these people. This strategy is not only advantageous because the artist is acknowledged but also because costs are minimal. The link Artex provides will help individuals from all walks of life without providing privileges for the elite in the industry. Artists can now gain control over their work thanks to Artex's blockchain-enabled platform. In addition, aspects such as transparency, traceability, and lower costs are not compromised.

- Traceability of artwork

Blockchain is a complex cryptographic tech, allowing users to better trace artworks through looking back at a painting's or sculpture's journey, right from its creation to its current ownership. Individuals will be able to retrieve information such as sales, analyses, certifications, appraisals, as well as studies about a specific piece of artwork.

Artex will list artwork under two scenarios, allowing for either 100% public offering of the artwork or a public offering of 49%. For the 100% artwork public offering, Artex will physically host the artwork with the platform, entirely taking care of insurance, storage and maintenance costs. In the second scenario, the insurance value of the artwork is tokenised. In this, 51% of the tokens are locked for a 1-year period with smart contracts, thus guaranteeing trade of 49% of the artwork on the platform.

ARTEX TOKEN EXPLAINED

Artex Token, the digital currency of the Artex ecosystem, will be used for shopping transactions, as well as for other privileged functions on the platform, as specified on its protocol/code. It is important to note that the Artex token serves as a functionality token only on the platform's ecosystem. This means that this token is functional as an interoperable utility, and therefore, it is not a medium of exchange by the public as a source of payment out in the public market.

The maximum supply of the Artex Token in the market comes to 100 million, with 50% of the total supply in circulation in the first year. From the remaining 50%, the supply of the Artex token will be laid out in pre-determined periods at intervals within the following four years.

WHY THE ARTEX TOKEN?

The Artex platform introduced the Artex Token to provide a secure and convenient mode of payment between users on the platform operating within the ecosystem. Functioning on blockchain and smart contracts, users will benefit from improved process efficiency. Smart contracts eliminate the need for intermediaries and therefore, reduce the chances of manipulation from third parties. Other than efficiency and convenience from smart contracts, users will save on costs as a result of eliminating intermediary commissions or pay. Overall, the inclusion of smart contracts promotes autonomy, offers a secure yet private backup for information, automation of tasks, while at the same time, upholding on accuracy.

WHERE TO USE THE ARTEX TOKEN

Understanding the use of the Artex token requires you to identify the different scenarios you can use it in. First and foremost, the Artex token is a functional utility token that will serve as a medium of exchange for the platform users in a decentralised manner. In this, this token remains relevant within the Artex ecosystem.

CIRCUMSTANCES IN WHICH ARTEX TOKEN CANNOT BE USED

Tokens in general offer a medium of exchange,

but it is important to check on its limitations so you understand where you can trade it and what you can buy using the token. Outside of the Artex ecosystem, this token is not applicable for use. You cannot use it to buy or pay out for goods and services from other platforms. In addition, the Artex token cannot be discharged as a form of settlement.

Owning the Artex Token does not provide individuals with any form of rights or shareholding on the platform. This means that simply because an individual owns a token, this individual cannot make any suggestions or create any content for the Artex ecosystem. All decisions are made by the management. Token owners are not entitled to receive fees or dividends; it is not a source of investment return.

CONCLUSION

Individuals looking to sell and invest in art now have the opportunity to do it the right way through Artex, an investment platform for crypto investors. Backed by blockchain technology, this investment platform addresses concerns that arise from forgery, security, lack of transparency, art ownership, as well as identifying the real value of a specific artwork. Being the first of its kind in the market, this blockchain-

based marketplace serves as a meeting point for all art-based participants in the wider market, from artists, galleries, and collectors, to meet their objectives. This platform delivers on its functionality due to the inclusion of experts in the industry to ensure that artists receive value for their artistic talent. It also features tokenisation of artworks, and the introduction of its own token, Artex Token, trading on this investment platform, is simplified to favour participants on its ecosystem.

Square 'Considering' Building Bitcoin Mining Rigs, Says Jack Dorsey

Not content with building a hardware wallet and decentralized exchange, Square may also get into Bitcoin miners.

Square CEO Jack Dorsey tweeted that the firm is considering building Bitcoin mining rigs. The firm is already building a Bitcoin hardware wallet, as well as a decentralized exchange. Jack Dorsey is all in on Bitcoin, and the leading cryptocurrency has increasingly become a focal point in the Square and Twitter CEO's worldview. Today, he unveiled the latest potential piece of his plans, tweeting that Square is exploring whether to build Bitcoin mining hardware.

"Square is considering building a Bitcoin mining system based on custom silicon and open source for individuals and businesses worldwide," he tweeted. "If we do this, we'd follow our hardware wallet

model: build in the open in collaboration with the community."

Dorsey laid out the reasoning in a tweet thread, noting the fact that increased distribution of cryptocurrency mining nodes helps secure a decentralized network.

He also wrote about the need for more energy-efficient mining, referencing one of the biggest mainstream discussion points around Bitcoin and crypto. It's one that helped trigger the crypto market's summer slump, after electric car maker Tesla protested the energy-intensive mining process.

"Driving towards clean and efficient energy use is great for Bitcoin's economics, impact, and scalability," Dorsey tweeted. "Energy is a system-level problem that requires innovation in silicon, software, and integration."

Here's Why Billionaire Real Estate Mogul Barry Sternlicht Owns Two Different Crypto Assets

Billionaire and real estate magnate Barry Sternlicht says that he owns Bitcoin (BTC) and Ethereum (ETH) for a number of reasons.

In a new interview with CNBC's Squawk Box, the chief executive of Starwood Capital says that he's invested in crypto due to his concerns regarding endless money printing and what he sees as questionable monetary policies.

"The reason I own BTC is because the US government and every government in the Western hemisphere is printing money now until the end of time, And this is a finite amount of something, and it can be traded globally and people have fiat currencies whether it's in Nigeria or... Bolivia or wherever, you can move into something that the world has accepted as a substitute for gold."

Referencing JPMorgan CEO Jamie Dimon who

said he thinks Bitcoin is "worthless", Sternlicht argues that the same case could be made for gold.

"What Jamie Dimon talked about, I mean gold is kind of worthless too, silver [as well], they have some industrial uses, but they're minor."

The billionaire says that while Bitcoin is minimal in its purposes, he sees high potential in Ethereum's ecosystem, plus all of blockchain technology in general.

DeGeThal

Decentralized Thaler

Crypto, e-wallet, smart banking and trading made easier.

White Paper 3.0

DEGETHAL

PRESALE IS ONGOING

Presale Ends in 13 Days

Buy now

Buy on Android

Buy on IOS

Bonus

Product Description

Crypto exchange platform accessible through regulated wallet that provides transparency and funds protection.

DeGeThal as crypto currency for everyday transactions: payments or receipts.

Built using latest blockchain technology, DeGeThal wallet allows the flow of crypto and FIAT coins.

Support for crypto-FIAT transactions

Payments security is guaranteed by checking procedures superior to the one used by banks.

Guaranteed access to the stored funds through DeGeThal exchange, open banking and DeGeThal wallet.

MOBILE BANKING

- Simple and safe storage of your funds
- Connected to the crypto exchange in real time
- Allowing you to pay with cryptocurrency for all transactions, including bills and shopping while enjoying solid security

Ripple Joins The Digital Pound Foundation to Help In The Development of A CBDC In the United Kingdom

This week, Ripple has joined the Digital Pound Foundation, which is a non-profit foundation to develop and implement a digital pound in the United Kingdom. Susan Friedman, the Head of Policy, represents Ripple as a Foundation on the board. Ripple will help the foundation by engaging central banks at a global level on the technicalities and policy issues related to central bank digital currencies (CBDCs).

Ripple's firm conviction that the United Kingdom has been in the vanguard when it comes to inspiring responsible innovation and growth in the crypto-asset space and developing a digital pound is the result of the effort

put in. Friedman was keen to note Ripple's excitement to support the design and implementation of a digital pound in their partnership with Digital Pound Foundation. She also brought out that The Foundation will be of great assistance in advancing the United Kingdom's goal of building a more inclusive and sustainable financial system.

The Future Of Money Redefined

The evolution of digital money has been brought to the limelight for potentially faster, cheaper, sustainable, and more efficient payments with greater functionality.

Central Bank of Brazil Reports Brazilians Have Bought More Than \$4 Billion in Cryptocurrency This Year

Brazilians have brought over \$4 billion of cryptocurrencies to the country, according to numbers from the Central Bank of Brazil. The commercial asset balance report presented shows that Brazilians have consistently acquired over \$350 million dollars of cryptocurrencies

each month since January. However, according to some analysts from the central bank, this number has the potential to reach double its worth this year.

Brazilians Purchase Millions Worth of Cryptocurrencies Every

Month The Central Bank of Brazil released a report that shows Brazilians have purchased more than \$4 billion in cryptocurrency imports since the start of the year. The report, which shows cryptocurrencies as part of the commercial balance of goods, shows these imports have been holding over the \$350 million number since January. The peak of the cryptocurrency buying spree occurred

in May when crypto purchases reached \$756 million during that month only.

Since then, purchase numbers have decreased, reaching close to \$500 million last August. The numbers for September are not available yet, so it is impossible to determine if the decreasing trend is still happening.

MINING COMPANY OFFERS FIRST-EVER "MINE-TO-TOKEN" CRYPTOCURRENCY TO INVESTORS LOOKING FOR EXPOSURE TO GOLD

Cryptocurrencies are considered highly volatile assets. The asset-based cryptocurrencies are used for digitising an asset, and the record is stored on the blockchain. For example, if a real estate property is sold to an individual, the information will be digitised instead of requiring paperwork. The records, like property location, deeds and ownership history of the property, are stored on the blockchain. Bitcoin is the most valuable cryptocurrency globally by market capitalisation, only subject to 20% to 30% swings in price on any given day.

WHAT MAKES AN ASSET-BACKED CRYPTOCURRENCY DIFFERENT?

The asset-backed cryptocurrency is the crypto coin linked to an object having an economic value. The asset-backed cryptocurrency introduces price stability in the crypto market. These cryptocurrencies provide the investor with various benefits and built-in utility. The benefits include a self-executing smart contract and decentralised finance project that pays a high annual yield. However, it works well beyond the decentralised peer to peer payment option, but still, it doesn't meet every investor goal.

It seems to be different from general cryptocurrency as it is less volatile. The asset-backed cryptocurrency is backed through tangible assets describing mechanics that affect cryptocurrency price change. They are tied to the external market to which they are linked to trade.

Various investors are looking to back their cryptocurrencies through real-world assets like

precious metals. Asia Broadband Inc. is a resource company that focuses on manufacturing, supply, and sale of precious and base metals specifically to Asian markets. With the launch of **AABB Gold (AABBG)**, a newly minted ERC-20 gold-backed token, and with the launch of ABB Wallet, **Asia Broadband, Inc. (OTC:AABB)**, has married gold stability with crypto innovation.

WHY INVESTORS ARE BUYING THE ABB GOLD TOKEN (AABBG)

Gold-backed crypto is a stable coin category in which token value is backed through the physical gold. When the crypto assets are pegged to physical assets, it is less volatile compared to other cryptocurrencies available for digital investment. Some of the investors hesitate to make digital investments due to privacy concerns. AABBG has a stable quality of a stablecoin with the token price supported at 0.1 grams of the spot price of gold, making it a safer investment for those who want a less volatile option.

The company is publicly listed in the United States, providing vertical integration benefits of its value chain. As we know, mining activities influence the environment or surroundings. Asia Broadband includes a mission to minimise such impact and sustain the net social and financial benefits to affected individuals.

They partnered with **Core State Holding Corp. (CSHC)** to create its own digital wallet and proprietary exchange. Within the first few weeks of launch over \$1 million AABBG tokens were sold!

The transactions made through **AABB Wallet** are end-to-end encrypted, restricting the unauthorised access of the third party. Asia Broadband promises the signature attributes of the normal crypto token such as transparency and hassle-free transferability. It will facilitate reducing the level of volatility and offer a sense of security for investors.

The asset-backed tokens are a special set of cryptocurrencies that are different from normal crypto tokens because they are backed by physical commodities like oil, gold and real estate. This reduces the level of volatility. The token offered by Asia Broadband is safe for the gold chain because of its security measure and end-to-end payment encryption. The company hit its all-time profit value of \$16.8 million in 2020 before its

innovative asset-backed token AABBG was launched in March 2021.

BENEFITS OF ASIA BROADBAND’S GOLD BACKED CRYPTO TOKEN

Asia Broadband’s **AABB Gold Tokens** are completely backed by gold, which comes from its owned gold mines in Latin America. Following the market stability, the AABBG token is poised to be better and more stable in value than other crypto assets.

The company is planning to release its Merchant API, which will allow B2B and B2C transactions to take place with AABB Wallet. The investors will be entitled to receive cashback while purchasing AABB Gold Token for making digital investments.

Some of the major reasons for selecting Asia Broadband are listed below:

-Security: The Company offers end-to-end encryption payment, which restricts the unauthorised user to access the transaction details.

-Lower transaction fee: The lower transaction fee (0.5%) makes the company an effective option for

cryptocurrency investment. No deposit fees.

-Transparency: It doesn’t include any hidden cost for making transactions such as buying and trading gold.

-Merchant API: Asia Broadband Merchant API facilitates B2B and B2C transactions done via AABB Wallet with security measures.

WHY THE AABB GOLD TOKEN IS BOTH THE PRESENT AND THE FUTURE OF GOLD-BACKED CRYPTOCURRENCIES

The minimum token price is associated with the existing spot price of gold, representing token benefits from the lower volatility of gold. Compared to the challenges of devalued fiat currencies, gold remains intact, and **AABBG** possibly also rises as a function of increasing gold prices. When the gold price fluctuates, the lower limit for the AABBG token possibly alters. However, the upside price will be driven as per market demand. Due to such reasons, the AABB Gold Token is both the present and future of Gold-Backed Cryptocurrencies. The vertical integration of Mine-to-Token gold-

backing makes the AABB Gold Token one of the most popular investment ideas concerning digital currency investment.

Asia Broadband is actively mining precious metals just the way it has been for the last 25 years. The company pledged to back their AABBG token with \$30 million of gold reserves, with a max supply of 5.4 million tokens. Their aim is to become the world leader in providing a standard of exchange that is of excellent quality, is secure, transparent, trusted, and backed by gold. The company's upcoming proprietary exchange will allow the AABB Wallet user to exchange their AABBG tokens for other cryptocurrency, such as Bitcoin, Litecoin, and more. Recently, they have opened a satellite office in El Salvador, to build demand for the AABBG token.

CONCLUSION

Asia Broadband, Inc. is focused and committed to performing the business operation with the code of conduct directed from an environment and ethics perspective. The company strives to meet long-term business associations, customer satisfaction and reliability. Therefore, if someone is looking to invest in digital currency, Asia Broadband provides a great platform with various benefits included.

Therefore, it can be concluded that Asia Broadband has come a long way in the sector of mining and cryptocurrency investment. The company's journey shows a great progression in its business operation with satisfied customers.

\$69,000,000,000 Pension Fund Considering Allocating Capital to Crypto Space

Australia's fifth-largest pension fund is reportedly considering allocating capital to the crypto markets.

The Financial Times reports that Queensland Investment Corporation (QIC), which manages \$69 billion worth of assets, is open to making cryptocurrency investments in the future even as it remains cautious of the nascent digital asset space.

QIC's head of currencies Stuart Simmons attributes the big funds' hesitancy to the regulatory risks of digital assets amid a lack of clarity on how governments and watchdogs would oversee the crypto space.

Simmons says that large investors want more regulatory certainty and protection against fraud,

theft, market manipulation and other "unquantifiable risks", but may likely seek out exposure to crypto once the market matures.

He adds that clearer regulatory requirements can also make conservative investors feel more at ease with putting their money on digital assets.

"Right now there are a number of uncertainties, and the operational infrastructure for institutional investing remains immature.

I don't think there's an inevitability about super funds and the institutional market investing in crypto, but as the segment matures... there's a likelihood that super funds seek out exposure...

Over 160 projects will launch on Terra (LUNA) early next year

This post was last updated on October 18th, 2021 at 05:19 am

Terraform Labs, the South Korean company behind the blockchain project Terra (LUNA), continues focusing on advancing the developer activity on the network.

Meanwhile, the true impact of the network's cardinal upgrade, dubbed Columbus-5, is yet to unravel, as the launch of Inter-Blockchain Communication (IBC) protocol and Wormhole support for Terra approaches.

160 more projects on Terra Columbus-5 successfully launched in late September and, according to the network's developers, Terra's ecosystem is on the verge

of an explosive expansion.

"Now that Columbus-5 is live, more than 60 projects are preparing to launch in the next six to eight weeks and more than 100 have recently announced plans for the end of the year or early 2022," Do Kwon, co-founder and CEO of Terraform Labs, told AsiaMarkets.

In the interview, Kwon continued explaining how the upgrade, which opened up countless avenues for the ecosystem's expansion, is about to boost Terra's stablecoin use case while putting upward pressure on the native token's value.

"More projects on Terra diversify and amplify the demand for UST, accelerating the expansion of the stablecoin supply and accruing value to LUNA holders," Kwon said.

HOW THE DTM TOKEN IS TRANSFORMING THE CRYPTO MARKET

The Growth of the Cryptocurrency Market

There is no denying that the current crypto and blockchain market is experiencing a surge in demand, with new cryptocurrencies and their subsequent values creating plenty of buzzes. According to an Allied Market Research report, the global crypto market will likely record a 12.8% CAGR growth rate between the years 2021-2030.

The report further claims that the key drivers of this growth will be a spike in demand for global remittances, as well as increased transparency in the international payments systems. Over two-thirds of the crypto industry's size in 2020 was due to the mining sector, which will continue to remain a dominant segment even in 2021 and beyond. The report also establishes that the Asian-Pacific cryptocurrency industry shall witness the fastest growth due to the rise in competition from several growing exchanges.

Another report claims that the global market size of the crypto industry will touch almost \$1758 million in 2027, growing at 11.2% CAGR.

While the proliferation, adoption, and growth of cryptocurrency seem evident, several factors have and will contribute to this massive growth in the years to come. Enterprises across leading industries have embraced digital transformation technologies, thus implementing blockchain systems to solve their key issues. The Financial Tech industry has also quickly digitised currencies, given the transparency and security it offers. As a result, cryptocurrencies

have witnessed immense popularity and have continued to grow, despite the pandemic.

The COVID-19 pandemic led to increased usage and growth of cryptocurrencies. Crypto exchanges across the globe experienced a surge in cryptocurrency investing and trading. Apart from this, several other factors have contributed to the growing crypto market. For instance, more and more cryptocurrency investors are finding them flexible and simple to use. Besides, many leading companies, as well as government authorities, are now supporting the cryptocurrency and blockchain system, using them actively for their projects. Additionally, social media influencers, as well as celebrities, are also resorting to social platforms and media to express their opinion on Bitcoin, as well as other cryptocurrencies. This is giving the right amount of push to the crypto market.

Given the above scenario, crypto-backed platforms like DeGeThal are bound to witness a growth in popularity and usage. In this article, discover how DTM Token offered by DeGeThal is transforming the crypto market.

THE 3-LEVELS OF VOTING IN THE DEGETHAL ECOSYSTEM

The DTM or the DeGeThal project was set up in 2021 with the sole aim of creating a universal crypto ecosystem for multiple use cases that aren't represented by traditionally available financial instruments. The DeGeThal crypto project can be accessed by anyone around the globe. The existing fiat currency system has several demerits and is

difficult to access for many individuals. However, digital currencies allow people to set up a parallel economic system, thus solving several global issues. The DeGeThal ecosystem essentially features a multi-currency wallet created for transparent as well as speedy transactions.

This digital wallet is the core element of the DeGeThal system. To offer its users increased opportunities, DeGeThal has also created an app that allows people to create their banking account, initiate transfers, as well as convert traditional global currencies into digital currency. People can use the app to purchase, sell, send, receive and convert the cryptocurrency.

The application also features a crypto wallet that will be later integrated into a CEX. Apart from this, DeGeThal will also provide users with several banking solutions, for which the platform will acquire the necessary licence. In the long run, the wallet will be transformed into a full-fledged tool that can be used for making daily payments, including payroll payments, microtransactions, in-store purchases, cashback on the store, payroll payments, etc.

Apart from this, there will be three different levels of voting within the DeGeThal ecosystem. While the first level will be all about submitting the proposal, the second level will entail proposal execution, whereas the third level will be related to confirming execution.

DTM TOKEN – THE CORE ELEMENT OF THE ECOSYSTEM

If you are interested in cryptocurrency investing, then the DTM token is a good option. DTM tokens form a key part of the DeGeThal system and are crucial for creating as well as developing the platform further. DTM unites the entire DeGeThal community, while serving as a crucial incentive element that enables users to earn additional profits.

The primary task of the DTM token is to design an ecosystem that enables participants to utilise the token while accessing the platform and ensure payments for DeGeThal services while trading the token on exchanges.

The ecosystem's elements allow users to not only receive income through staking but also provide liquidity to pools, as well as community incentive programs. The above elements when combined helps in the smooth and stable running of the ecosystem, while increasing the overall cost of the DTM token on the crypto exchanges. It will also help in raising the interest and the popularity of the DTM tokens, and boost the confidence of users in the DeGeThal system.

DTM TOKEN CHARACTERISTICS:

- It has been developed on the Binance Smart Chain.
- 100,000,000 DTM tokens will be emitted.
- 50,000,000 DTM tokens will be offered for sale.

Since the DTM token will be issued on a limited basis, it implies that the overall pricing of the token will increase with the growth in the project ecosystem.

This will also lead to a surge in the demand for the tokens. DeGeThal also plans to list the token on premier crypto exchanges soon. Apart from this, a portion of the DTM token shall be blocked within the wallet for staking purposes. All of the above would lead to a surge in demand for the token. DTM tokens will also be utilised on the platform for leverage. This shall further increase demand for the token. The DTM token shall be used within the referral program for expanding the cryptocurrency community and supporting active members.

Every commission in the DeGeThal system will be paid using the DTM token. All the applications installed within the DeGeThal ecosystem will also make use of the DTM token for paying commissions.

TOKEN DISTRIBUTION

THE DTM TOKEN WILL BE DISTRIBUTED IN THE FOLLOWING MANNER:

-3% of the transaction fee will be distributed among holders automatically.

-3% will be automatically added to the liquidity pool.

USING THE TOKEN

-The DTM token will be used for paying the platform commissions for crypto transfers.

-For paying commissions in the applications deployed within the ecosystem.

-Paying for DeGeThal ecosystem services.

-Paying for the staking programs for token holders.

-Making payments towards the referral programs.

-Making rewards payments and encouraging users to take part in the DeGeThal work.

-Using tokens as leverage on the platform.

-Paying for any marketing campaigns.

OTHER USES OF THE TOKEN

-Purchasing DTM tokens on crypto exchanges.

-Selling DTM tokens on crypto exchanges.

-Transferring of DTM tokens in the blockchain between the digital wallets.

HOW DEGETHAL DISTINGUISHES ITSELF FROM OTHER FINANCIAL PROJECTS

Unlike other financial projects, the DeGeThal ecosystem distinguishes itself by offering multiple advantages. To begin with, DeGeThal is a decentralised finance ecosystem that offers many

banking and financial services, operating based on its e-banking licence.

The ecosystem features a wallet that enables users to connect or make bank accounts and bank cards. Additionally, DeGeThal also offers a platform for trading that allows users to engage in currency and digital assets trading. Apart from this, it also provides users with an NFT marketplace, as well as a payment gateway system for accepting fiat and crypto payments.

OPPORTUNITY FOR EARNING PASSIVE INCOME

DeGeThal also offers an excellent opportunity for receiving passive income to users by offering a staking system. It also provides liquidity providers with the opportunity to earn money. DeGeThal offers numerous incentive programs intending to support the community.

The platform also offers a unique referral program for increasing the community, as well as supporting its promoters and active members.

DTM TOKEN SUPPORT PROGRAM

The primary aim of DeGeThal is to ensure the stable growth and development of its ecosystem. To achieve this, DeGeThal has designed a DTM support program and has implemented the same using a variety of tools, like a staking system, incentive reward program, as well as a referral program. Apart from a range of benefits, as well as bonuses offered to DTM token holders, they also get to take part in the voting procedure and make crucial decisions for the projects alongside the community.

Banking and Financial Products: DeGeThal offers a range of banking and financial products to users across the globe, irrespective of their economic and social standing, well-being, education, and experience. It makes DeGeThal an immensely popular as well as a democratic project, which can be accessed by everyone.

Thanks to its payment gateway facility, it allows all the stores and services connected to the ecosystem to accept around 26 payments globally, which further helps to increase their customer base. This also helps them to expand services to other areas, while making the platform highly competitive.

Increase the Project Partners and Community: DeGeThal will continue to promote its banking and financial services across the globe, thereby expanding the community as well as the project partners, while also increasing the overall value of its DTM digital token on crypto exchanges.

Multi-currency Wallet: DeGeThal's core ecosystem

is designed based on the multi-currency and multi-currency wallet, while the bank accounts and bank cards have been connected to the same. DeGeThal plans to connect the wallet with the NFT marketplace, a gateway for accepting payment in crypto and fiat currency across the globe, as well as a trading platform at a later date. DeGeThal has closely analysed the market as well as its requirements and will thus create a financial product that will further help it to connect sophisticated blockchain tech with the classical finance system, as well as the banking segment, significantly expanding opportunities provided by classical finance.

Safety and Transparency: DeGeThal gives a lot of importance to the security of its ecosystem, as well as its products. The company is focused on ensuring transparency of its operations as well as upholding the trust of its partners and users. All the activities of the platform are carried out based on an e-banking licence, as well as regulatory requirements. This allows users to track all the operations in their personal accounts.

Maintaining and Developing the Community: DeGeThal places a great deal of importance on developing and maintaining the community. It has created a unique referral program and will organise several seminars as well as training courses to inform its users about its features, tools, opportunities, and products.

In addition to the above, DeGeThal will continue to improve and develop quality products that are

part of the ecosystem to provide an easy-to-use financial platform to its users.

CONCLUSION

To sum up, DeGeThal is a unique ecosystem that consists of a payment and wallet system with MasterCard/Visa cards. It offers a centralised exchange with a liquidity pool for trading. The platform also offers a unique reward system and staking program, along with the voting system. DeGeThal offers its own blockchain and DTM token to users aside from smart contracts and payment gateway facility. Each of the above features makes the ecosystem highly innovative and apt for cryptocurrency users.

The DeGeThal ecosystem is designed as per blockchain technology. It is highly trustworthy and safeguarded from any database falsification. Using the wallet, DTM users can keep a track of the growing DTM tokens, buy goods, make payments, connect banking cards, create accounts using money that will be transferred at the time of making payments, send tokens for staking, and participate in liquidity offering, and other incentive programs. This helps the platform to simplify and make payments easy to access for everyone. So, if you are searching for the next best crypto project to invest in, then choose the DTM token that has transformed the crypto industry in many ways.

For more information about DeGeThal project and ecosystem, visit [https://www.degethal.com/!](https://www.degethal.com/)

CFTC Fines Tether and Bitfinex \$42.5M for ‘Untrue or Misleading’ Claims

The U.S. regulator issued an order “simultaneously filing and settling charges against Tether,” the issuer of the crypto industry’s largest stablecoin.

The Commodity Futures Trading Commission (CFTC) fined Bitfinex and Tether more than \$42 million on allegations the USDT stablecoin was not fully backed at all times and that Bitfinex violated a previous agency order.

The federal commodities regulator settled charges with the sibling crypto companies on Friday, barring both firms from “any further violations of the Commodity Exchange Act (CEA) and CFTC regulations.” According to a CFTC press release, Tether’s stablecoin was fully backed by reserves for only one-quarter of the time over a 26-month period between 2016 and 2018. Further, Tether commingled reserve funds with the company’s cor-

porate funds and held reserves in non-cash products.

“At various times, Tether maintained some of the Tether Reserves in bank accounts other than the Tether Bank Accounts. Tether represents that, at times, it also included receivables and non-fiat assets among its counted reserves; and further represents that Tether

has not failed to satisfy a redemption request for tether tokens,” an order attached to the release said.

The New York Attorney General’s office reported similar findings in an investigation into Tether and Bitfinex that was settled earlier this year.

Grayscale hints at plans to convert Bitcoin trust into BTC-settled ETF

Grayscale looks to be seeking to restructure its Bitcoin Trust into a

physically-backed fund after the SEC approved a Bitcoin futures ETF.

Institutional investment giant Grayscale is reportedly considering converting its Bitcoin Trust into a physically settled exchange-traded fund (ETF).

On Oct. 17, Barry Silbert, the CEO of Grayscale’s parent company Digital Currency Group, hinted that Grayscale is making plans to convert its Bitcoin Trust into a spot-settled Bitcoin fund.

After having taken to Twitter to criticize the cash-settled Bitcoin futures ETF recently approved by the U.S. Securities and Exchange Commission (SEC), Bitcoin commentator

Preston Pysh chimed in to ask Silbert when Grayscale’s Bitcoin Trust would be converted into a BTC-settled ETF. “Stay tuned,” Silbert responded.

However, Grayscale Bitcoin Trust investors appear to have been unsettled by Silbert’s remarks, with Twitter user “svrgnindividual” questioning what a restructure would mean for investors holding shares in Grayscale’s Bitcoin Trust.

“What happens to us Grayscale investors once the spot ETF is approved?”

SECURING THE GLOBAL HEALTHCARE, RADIOLOGEX STO IS AN OPPORTUNITY TO HAVE YOUR SHARE OF BENEFITS

The healthcare industry is working towards equal opportunity in service provision for individuals worldwide. Meeting this objective is not an easy task, but with the recent creation of R-DEE, an all-in-one ecosystem and network, it seems possible to meet global healthcare needs not just on patient-doctor requirements but also on distributors and professionals. These capabilities are available under one platform, making it possible to streamline, expand, and upgrade individual healthcare services all under one roof.

Created by US-based Radiologex, the R-DEE network offers healthcare professionals the ability to connect and collaborate globally from any web-enabled device. A global network backed by real-time user identity proofing, the R-DEE network serves as a frictionless, efficient, and secure mobile healthcare platform. Not only is it the first medical interface network, but it is also an investment opportunity.

The R-DEE network is geographically unbound, and at the same time, it caters to the full healthcare industry, creating truly interdisciplinary and synergistic connections across departments and borders. The network is equipped with professional doctors, administrators, vendors, radiologists, clinicians, ER personnel, instructors, nurses, lawyers, service providers, office managers, researchers, technicians, academia as well as information officers to deliver all-rounded services. Karnav Shah, CEO Platinum Crypto Academy and Editor in Chief at *Cryptonaire Weekly* [explained](#),

“Radiologex is unveiling a one-of-its-kind, state-of-the-art HealthIT and SaaS (Baas) solution for

the \$5 trillion Global Healthcare industry which continues to increase dramatically year over year. The Radiologex Digital Encryption Environment (R-DEE) is currently one of the most talked-about medical blockchain networks in the crypto circles.”

The statement from the press release is not just hype in the community. Backed by next-generation blockchain technology, information remains 100% private and confidential. With KYC user verification, you can login instantly, even on shared devices, thanks to simplified passwordless access. Listing the benefits of the platform to the healthcare industry is just a section of the benefits of Radiologex. The other half of Radiologex’s benefits is its investor capabilities.

Addressing the investor benefits, investors and users alike can buy Radiologex security tokens. Not only do they serve as a security offering, but investors can also benefit from the quarterly dividends of revenue generated on the platform. Our Radiologex review highlights both healthcare and investment benefits users need to look out for, as well as provides an in-depth look into why you should join the Radiologex family.

WHAT IS RADIOLOGEX STO?

Users looking to identify an investment opportunity from Radiologex can purchase its security token offering. The [Radiologex STO](#) is a security token offering by Radiologex and is currently one of the top STOs in the market, checking from the popularity it is drawing and the ongoing Round 1 sales. Round 1 of the sales is still ongoing, with generous bonuses available.

Radiologex is seeking to sell this security token at a global reach, making it one of the top STOs for investors. This is because the face value of the token is not limited to a specific region or geographical section. As such, investors do not have to worry about economic instability in a specific geographical region, thus eliminating the fear of losing their investments. The list of secondary exchanges that can trade the token is increasing in number over time, allowing individuals in different parts of the world to gain access. Despite the limitation of some countries not being able to buy the STO currently, Radiologex users in countries such as Liberia, South Sudan, Congo, Iran, Iraq, and Myanmar can catch up as soon as a secondary exchange that allows these regions to participate are offered.

Round 1 of the STO is still live, with each security token face value standing at \$1. Although the total security token value stands at 100 million, Round 1 will see the sale of 20 million tokens only. During this round, the platform is offering various bonus packages to ensure that investors receive their money's value. With bonuses going as high as 100%, investors are encouraged to grab this investment opportunity. The probability that the face value for the Radiologex STO will remain at \$1 will probably not surface, is a good reason for investors to make their purchases during Round 1, prior to the token being listed publicly on exchanges.

The different bonuses are dependent on the amount of tokens the investor purchases. For example, Tier 1 offers a 100% RDG bonus with an investment of 50,000 or more (paid in USD, EUR, or crypto), whereas Tier 2 offers a 75% RDG bonus with an investment of between \$25,000 and \$49,999.99. This said, the more you invest in this top STO, the more benefits you receive. Another crucial benefit arises from referral bonuses that give the first 100 referrals up to a 100% matching bonus.

WHY IS AN STO MORE SECURE?

As compared to traditional financial products or ICOs, the digitization of these products leads to improvements of the products for investors as well as issuers in the market. Below are reasons why Security Tokens are advantageous.

– Liquidity

Blockchain technology allows investors to buy security tokens and own them as a fraction. Fractional ownership allows for lower minimum investments, thus promoting liquidity. This is the reason security tokens are being used easily to settle payments for other assets. Gone are the days when individuals had to sell off an asset or security just to settle a less amount of bill. For example, you can sell a portion of your token

to pay for a real estate property.

– More compliance

Investors are looking to invest in regulated environments, thus the reason they are drawn towards regulated securities. STOs are currently more compliant and thus the reason that Radiologex STO is sold by a company that is SEC-compliant. With full regulatory compliance both the investor and the company are better protected. The supporting platform for the STO token issuance is Securitize, an SEC Registered Transfer Agent operating on the blockchain. Audit trail and security right from the creation of the security token is easy, making the process transparent and easy to audit thanks to blockchain technology.

– New investor abilities

Considering that the token is regulated, investors can support the implementation of security tokens. As more countries embrace the functionality of STOs, the more tradeable they will be across the globe. As such, Radiologex comes with a worldwide target market, and for the countries that are not yet compliant, users can be notified when their regions can access a secondary exchange that can allow them to buy the token. The regulatory framework governing security tokens gives reason to the crypto community to invest without the fear of scams, as it was noted with ICOs.

– Transparency

Blockchain technology allows individuals to verify and track data with ease. In addition, it also prevents tampering due to its immutability. Investors can document ownership of the token to uphold transparency, thus making transactions fast and reliable. As such, Radiologex has registered a maximum supply of 100 million RDG tokens. This infrastructure will ease auditing; thus, it will help to prevent and reduce cases of mispricing or manipulation by financial institutions.

– Promote scalability and efficiency

Blockchain tech and the inclusion of smart contracts is reducing many of the inefficiencies in the financial market. Automated KYC and AML process eliminates the need for a back office to vet each investor, which also means that costs are reduced. The absence of paperwork and reduced complexity makes the processes fast without compromising security. Investors will also experience real-time settlements on secondary exchanges, which is a key feature that is allowing Radiologex to reach out to its global target market.

WHAT ARE THE EARNING OPPORTUNITIES

As compared to traditional financial products or ICOs, the digitization of these products leads to improvements of the products for investors as well as issuers in the market.

Below are reasons why Security Tokens are advantageous.

WITH RADIOLOGEX STO?

The Radiologex STO has various earning opportunities for investors that make the investment ideal for the crypto community. Other than trading the token depending on the market price, investors can benefit from the other income streams offered by Radiologex. These include:

– Quarterly dividends payout

After investors have purchased their tokens, this investment remains constant as they monitor the price differences where necessary. However, Radiologex pays out dividends on a quarterly basis from revenues generated by the R-DEE platform to its investors. Even

better, the payment is automated to deposit in the individual's wallet or dashboard. This automation makes it easy for you to monitor the company's progress because the dividends are not a constant figure.

– Bonus opportunities

As soon as you invest with RDG, you can obtain an earning opportunity from the available bonuses. The bonuses are different depending on the amount you invest. To encourage higher investment, the platform offers a higher percentage bonus. There are four tiers of bonuses, each with a different bonus percentage,

with the first tier being higher than the subsequent tiers. For example, Tier 1 offers a 100% bonus, Tier 2 offers 75%, Tier 3 offers 50%, and Tier 4 offers 25% bonus. The more you invest, the higher your investor bonus.

– Availability of a revenue royalty stream

Radiologex STO is backed by a revenue royalty stream which means that each token represents a claim against a portion of Radiologex platform generated revenue and proceeds from potential monetization of the business (e.g. sale or IPO).

– Trading

As a security token, investors can trade their tokens at any time after issuance. For example, investors who bought the token during Round 1 bought each token at a face value of \$1. During Round 2, it is expected that the face value will be higher than the initial \$1. In this, investors can sell their tokens when the prices are suitable.

WHY RADIOLOGEX TICKS ALL BOXES FOR INSTITUTIONAL INVESTMENTS

Radiologex ticks all boxes for institutional investments making it ideal not just for individual investments but also for large institutions. George Tyler, the co-founder and blockchain architect of Radiologex, during a press release [said](#),

“There is simply nothing like R-DEE that exists today. It is the industry’s first and only Web 3.0 solution and dedicated healthcare network for managing all the time-consuming yet critical aspects of operating in this multi-faceted and task-heavy field, where speed and security are paramount.”

Below are the reasons why the platform qualifies for institutional investments.

– Recognised legal entity

Radiologex is a US-based legal entity participating in trading the financial markets, and it has a significant influence, more so in the healthcare and financial fields.

– Lower cost of investment

Due to its size, its economies of scale lower the costs of investment due to the ease of sharing skills of professionals. Radiologex brings together experts from various fields to ensure efficient healthcare service delivery. In this, there is no need for intermediaries, thus further lowering the cost of services and products.

– Real-time access to information

The R-DEE network comes with better analyst

forecasts due to its real-time access to information and collaboration with other personnel, all with complete healthcare regulatory compliance and certification. The platform offers a one-stop shop for healthcare needs, not just for professionals but also for suppliers and researchers.

– Global target market

The world is gradually becoming a replica of a small village. As a result, individuals are seeking an arena where they do not have to change service providers despite their geographical movements. Gone are the days when limitations arose from where an individual is located. Radiologex is making this objective possible by connecting individuals across the globe through the R-DEE network, which is accessible through any web-enabled device.

– Diversified services

Many other blockchain-backed platforms are specific to certain services, but Radiologex brought together all healthcare-related services under one platform.

HOW TO INVEST IN RADIOLOGEX?

Investing in Radiologex is easy and fast for individuals both in the crypto community and for users who are not. While Radiologex started as a platform for connecting the healthcare industry globally, it went ahead to offer an investment opportunity through its security token offering.

The first step will be to create an account from which you will be able to buy RDG tokens. To create an account, you will need a username and an 8 character password. When buying tokens, individuals can make payments via USD, EUR, or cryptocurrency. The financial flexibility promotes diversity to encompass both the crypto community and other users alike. There is a minimum investment, although it varies for US (\$5,000) and non-US (\$2,500) residents.

In addition, already active investors can increase their investment through referral bonuses. Individuals can multiply their investment by earning up to a 100% referral bonus.

CONCLUSION

Securing global healthcare, the Radiologex STO is an opportunity to have your share of benefits not just from better healthcare services but also from outstanding investment opportunities. The above Radiologex review highlights why the platform is a game-changer in the market as well as all of the possible benefits both users and investors can obtain from the platform. A better understanding of why STO investments are gaining popularity will help users to understand why going for this top STO is an ideal move. Investors are called to embrace Radiologex and reap its benefits and advantages against other STO investments currently in the market.

Crypto market cap hits an all-time high of \$2.5 trillion

The crypto industry market cap has reached a new all-time high of \$2.6 trillion.

The cryptocurrency market has set a new record with an all-time high of \$2.6 trillion according to data from CryptoSlate.

Crypto market touches new ATH This gives the crypto industry a lead over some of the largest tech giants, such as Apple. Bitcoin is currently hovering over a \$1 trillion market cap. As highlighted by the data, the crypto market was able to reach this peak thanks to the surge in the price of the leading digital asset.

Compared to the previous \$2.55 trillion record high witnessed in May, this is a watershed moment for an industry that boasts of more than \$100 billion market cap in altcoins. The industry has shown a 233 percent surge in aggregate market cap

from January's \$830 billion.

Analyses comparing the crypto industry to giant companies in the world show that the total cryptocurrency market cap now stands larger than even that of the biggest companies in the world.

For instance, data from CompaniesMarketcap shows that Microsoft, an American multinational tech company famous for its software, has a market cap that stands at \$2.28 trillion.

Bitcoin, a pacesetter for altcoins Taking a more cursory look at the data, Bitcoin leads the pack with \$1.18 trillion in market cap. This represents a 45 percent share of the total crypto market cap.

Interestingly, the number of altcoins that have seen their market cap exceed \$1 billion have also grown to over 100 tokens.

Number Of Bitcoin Whales On The Rise As BTC Chases New All-Time High

Bitcoin whales are not slowing down on their accumulation tour despite rising prices. Bitcoin has now hit \$62K for the first time in five months and the market has rejoiced over this milestone. With more growth expected in the coming weeks, investors are making sure that they do not miss out on what the digital asset has to offer in terms of value.

BTC is now the de facto internet store of value, so investors are FOMO-ing into the asset. This has translated to a higher price for BTC. However, the majority holding is still skewed in favor of the whales. These addresses which hold 100 to 1,000 BTC on their balances are increasing the share of the total circulating supply which they command, and data shows that there has been an uptick in the number of whale addresses holding 100

to 1,000 BTC.

5 BTC + 300 Free Spins for new players & 15 BTC + 35,000 Free Spins every month, only at mBitcasino. Play Now!

Addresses Holding 100 To 1,000 BTC Jumps 1.9%

A recent report from Santiment showed that the number of addresses holding between 100 and 1,000 BTC on their balances had grown in the past five weeks. A reported 254 new addresses had increased their holdings to join this category of whales, who now hold about 21.3% of the total bitcoin circulating supply.

The 254 new addresses represent a 1.9% increase in the number of these whale holders, signaling more accumulation sentiment among bitcoin investors in the recent weeks.

HOW FERRUM NETWORK'S STAKING AS A SERVICE (SAAS) MODEL BENEFITS BLOCKCHAIN START-UPS AND DEFI INVESTORS

Staking is the process to secure the network on Proof of Stake (PoS) blockchains. Unlike conventional Proof of Work (PoW) models, token owners can stake their acquired native tokens and earn a percentage yield as rewards. Simply put, staking facilitates validating a transaction or adding another block to the network. For blockchain start-ups leveraging the PoS blockchain networks, it helps them incentivize investors by allowing them staking opportunities.

Also, with specialist assistance, blockchain businesses can go for tokenisation and integrate staking features. With more and more investors tapping into DeFi and Staking, blockchain projects that allow seamless and flexible Staking opportunities have the edge over others. Ferrum Network provides enterprise-level Staking as a service to both blockchain start-ups and investors.

WHY STAKING AND HOW FERRUM NETWORK CAN HELP

What drives investor sentiments in favour of a project is its ability to provide a practical utility and motivation. While tokenisation is becoming increasingly popular amongst start-ups as an advanced method to raise funds for their ideas, the problem is the tokens in many different business models do not provide a direct utility to investors. By integrating Staking, blockchain start-ups can create practical utility and incentivize token holders. Typically, when investors stake their acquired native tokens, they earn a fixed percentage yield commonly known as APY (Annual Percentage Yield). It allows them to grow their crypto wealth as the token use increases when the project gains popularity. By

integrating Staking, blockchain start-ups that don't have a direct utility for their tokens can also attract investors by allowing them to tap into the world of DeFi and earn guaranteed rewards in perpetuity.

Ferrum Network provides end-to-end enterprise-level staking solutions to Blockchain start-ups and helps them seamlessly integrate Staking. Staking requires specialist attention, and creating a seamless setup is quintessential for automated rewards distribution. Also, with Ferrum's specialized services, blockchain start-ups can offer more flexible opportunities to their investors.

Let's take a quick look at why Blockchain start-ups must consider integrating the Staking feature:

Investor Motivation: Investors put in their funds to grow their crypto wealth. Staking allows them to earn fixed rewards, and they can start growing their crypto wealth from day one and as long as they continue to hold their acquired tokens. Introducing Staking allows projects to gain more investors, and Ferrum Network makes it easy for start-ups to accomplish that.

Token Utility: Many DeFi projects that start enthusiastically fail when their newly minted coins are listed on a Decentralized Exchange (Dex). Most investors simply dump the tokens as they provide no real-world practical utility to investors. With Staking, investors will earn fixed rewards as long as they continue to hold the tokens. And in some cases, the model could be designed in a way that these rewards continue to grow in perpetuity as the transactions on the network grow. Therefore,

it demotivates investors from dumping the tokens when listed.

Market Acquisition: Without a practical utility for investors, the tokens will have limited growth. Organic investors who would hold the tokens for a longer period to support the project's initiatives will look for real utility. With staking, blockchain start-ups can attract organic token users, which in turn helps them expand and acquire greater market size.

Liquidity Crisis: A liquidity crisis can kill a project. Community members and stakeholders always prefer tokens with enhanced liquidity. Also, investors feel confident about a project if there is sufficient liquidity to facilitate seamless trading. With Staking, start-ups can ensure optimum liquidity to gain the confidence of their community members, stakeholders, and potential investors.

UNDERSTANDING BARRIERS TO STAKING

Blockchain technology is evolving and integrating Staking can be challenging. It requires professional and experienced experts to design and integrate Staking to make sure everything is automated and works efficiently. Mostly Staking has been limited to bigger projects with deep pockets. Ferrum Network offers cost-effective professional solutions and support to help even mid-cap start-ups integrate offer Staking to their existing and potential investors.

Bigger projects have their main net, and that's where they provide investors/token holders with the opportunity to stake their acquired native tokens. For smaller projects, the options are limited.

There is also a dearth of dedicated Staking services solutions in the market, and the challenges are pertinent. Amongst the few that one may come across, the solutions available are not that great, and above all, incompatible with all kinds of tokenomics models. Also, the existing solutions fail to offer customized staking solutions depending on a project's particular token economics model. Ferrum Network has worked with a long list of projects, providing custom staking solutions for all types of blockchain start-ups. Ferrum Network also promises end-to-end support throughout the implementation and integration processes of its white-label staking products.

FERRUM NETWORK'S STAKING SERVICES TYPES AND BENEFITS

No doubt, integrating staking as a feature in your on-chain model has many different advantages, and it can take your start-up project to another level. Not to mention that it will also accentuate and make your fundraising efforts more effective as it will create a very practical utility for existing and potential investors. Ferrum Network undertakes the entire responsibility of integrating Staking features to your tokenomics model and ensures guaranteed successful integration. It also offers customization depending on the specifics of your project. Let's take a look at Ferrum Network's Staking as a Service offering:

– Traditional Staking

Ferrum helps with the seamless integration of traditional staking. Traditional staking allows token holders to lock their tokens for a specific period to generate fixed rewards. Any investor can purchase several native tokens and stake them on the blockchain network. This helps to validate transactions on the blockchain, and in return, they get to earn guaranteed rewards. These rewards are automatically distributed at the end of the staking period, and investors can choose to withdraw or reinvest the reward tokens and stake them on the network. Effectively, traditional staking creates instant utility for your new tokens and provides investors with a unique opportunity to earn guaranteed rewards. While blockchain projects get the necessary liquidity, investors earn rewards, thus, creating a win-win for both.

- Liquidity Staking

Ferrum Network can also help your project integrate a liquidity staking model to provide greater impetus and motivation to token owners. By integrating Liquidity Staking features, blockchain start-ups can allow token holders the opportunity to provide liquidity to dedicated Liquidity pools. By becoming a liquidity provider (LP), token holders can earn rewards by providing liquidity to various liquidity pools. Typically, liquidity providers can earn additional lucrative rewards. Moreover, by integrating liquidity staking features, users can earn rewards in a secondary token which is different from the staked tokens. Ferrum Network helps in the successful integration and implementation of this feature.

- VIP Staking

When it comes to providing select investors with the opportunity to become a liquidity provider and participate in a staking pool, the VIP staking feature allows projects to select investors based on a number of factors. It also helps projects to allow early investment opportunities and benefits to select investors. Typically, with VIP Staking feature projects can create a whitelist wherein they can add investors based on many different factors such as:

Token holdings: Projects can encourage users to hold more tokens by allowing those holding more tokens exclusive access to staking opportunities. Users with a certain number of tokens can get whitelisted and become a liquidity provider in dedicated staking pools.

Randomly selected lottery rewards: Projects can introduce exciting lottery rewards for select token owners by allowing the few chosen ones to get access to liquidity staking pools.

Pre-Sale/IDO Participants: To reward early investors, projects can allow whitelisting of Pre-sale/IDO participants and provide them with an exclusive opportunity to earn additional rewards by investing in staking pools.

Holding/rewarding in a particular NFT: With whitelisting, projects can also mint a specific NFT token and reward users. NFTs are getting extremely popular, and they provide an immutable certificate of authentications.

Usage of their dApp: The whitelist will also help create a list of users who can use a project's dApp. It can be used to provide early access. And based on the dApp usage, projects can allow investors to be a part of a liquidity staking pool. If done strategically, it can help with client acquisition for dApps.

Engagement with their social networks/community: Based on community engagement, investors can get whitelisted and benefit from the opportunity to stake tokens.

VIP Staking helps in making the process more interesting and customized to reward a particular group of investors by allowing them early access to exclusive access to staking pools. For example, the whitelist can include members who demonstrate a certain level of interaction in community groups promoting the project. It will motivate community members to be active and participate in community groups.

- Multi-Token

Depending on the tokenomics and the project design, integrating the staking feature may require multi-token support. Ferrum Network enables and helps blockchain projects with their model and helps them integrate multi-tokens which makes staking seamless. Often for staking pools, projects reward users in a different token apart from the governance token.

- Liquidity

Liquidity is one of the most important aspects that many projects often overlook while integrating the staking feature. Ferrum Network helps blockchain start-ups tokenize and create a model that ensures optimum liquidity throughout. While introducing implemented. Ferrum Network has successfully helped several blockchain projects with their liquidity issues. staking and creating staking pools projects can ensure enhanced liquidity; the key is that the entire model should be efficiently designed and

FERRUM NETWORK STAKING AS A SERVICE ADVANTAGES

Ferrum Network's Staking services come with multiple advantages and benefits. One of the most important aspects of successfully integrating and implementing staking features to your tokenomics model is to make sure it is done by experts who have a proven track record. Any discrepancy can simply shatter your investor confidence and bring additional liabilities. Here are a few projects that should consider Ferrum Network if they are looking to integrate staking services:

End-to-end Support: Ferrum's experts provide end-to-end support, which means they help with both conceptualisation and implementation. It includes helping with tokenomics design and technical support to integrate and implement staking features. Moreover, they also help in community building and documentation related to staking.

Fund-raising solutions: While integrating Staking allows a project to create immediate utility for the tokens to attract investors; the Ferrum network also supports practical fund-raising. It helps projects connect to investor communities and pitch them the custom staking opportunities and token utilities. Ferrum Network also provides users with tailored fund-raising solutions to help them bring their ideas to life.

Enhanced Reach: Getting the word out in the community and creating the initial buzz can be challenging. Ferrum network not only helps create instant utility for your tokens but also pushes them on relevant platforms to attract potential investors and users.

– **Flexible Options:** Ferrum Network can help with flexible options. and the services are highly cost-effective. As a blockchain start-up, you can offer

traditional staking and create liquidity pools to reward investors for providing liquidity.

– **Proven Track Record:** Ferrum Network has been helping businesses with their Staking feature integration and has helped many different projects successfully raise liquidity by allowing investors to stake their acquired tokens. There is a long list of projects that have created a practical utility for their potential investors by integrating staking features using Ferrum Network white-labeled staking integration services.

CONCLUSION

Staking has become increasingly popular amongst crypto investors. Many different projects are now actively pitching staking opportunities to potential investors to raise liquidity. However, for mid-cap and blockchain start-ups that don't have a lavish budget, integrating custom staking features into their tokenomics model can be challenging and out of budget. Ferrum Network offers top of the line staking integration services to blockchain start-ups and allows them to create instant utility for their acquired tokens. It helps them with creating relevant smart contracts and sees through the entire deployment and implementation processes. Ferrum Network also has a proven track record of helping a long list of blockchain start-ups integrate Staking feature rewards for investors. The company is dedicated to helping blockchain start-ups excel and get their ideas on the ground. Integrating staking and creating utility for your newly created tokens can be a breeze. If you're a blockchain start-up and struggling with integrating staking features or creating a practical utility for your token, Ferrum Network can help.

Polkadot (DOT) founder announces \$774 million development fund for DeFi

Wood invited DOT holders to put forward their suggestions for furthering the network's growth, offering Polkadot's treasury funds as an incentive.

Following DOT's rally last week, driven by the announcement of Polkadot's highly-anticipated parachain auctions, Gavin Wood teased \$774 million ready to be spent on innovative ideas.

Polkadot, created by Wood, currently has 18,936,300 DOT in its treasury, which can, according to the founder, instead of being slowly burned by the protocol, fund anything that the network's governance believes valuable.

Building, improving,

educating, and beyond "The Polkadot treasury currently has 18,936,300 DOT (DOT, not USD – do the math) in it ready to spend on *your* ideas for building, improving, educating and indeed, anything else that the Polkadot governance believes valuable," Wood wrote on Twitter, inviting DOT holders to put forward their suggestions for furthering the network's growth.

The network's proposed on-chain governance system takes into consideration token holders, validators, a Council, and a Technical Committee.

Putin Says He Accepts Crypto's Role in Making Payments

Crypto 'has the right to exist,' Putin says in CNBC interview

U.S. considering new regulations after Chinese crackdown

Follow @crypto Twitter for the latest news.

Russian President Vladimir Putin signaled tolerance of cryptocurrencies, which are drawing increasing scrutiny from regulators around the world amid fears they can be used for money laundering and criminal activity
Cryptocurrency "has

the right to exist and can be used as a means of payment," Putin said in an interview with CNBC that was posted on the Kremlin's website Thursday. Still, he cautioned it was too soon to talk about using digital currencies for trading oil and other commodities that form the bulk of Russia's exports.

Russia has sought alternatives to trading in dollars since being slapped with sanctions in 2014 following the annexation of Crimea, and Putin accuses the U.S. of using its currency as a weapon. Crypto backers

argue decentralized money will eventually replace fiat currencies issued by central banks.

The Bank of Russia has repeatedly warned investors that the crypto market is extremely volatile, and digital currencies are not allowed to be used as a method of payment domestically. However, there are no plans for a blanket ban similar to China's, Deputy Finance Minister Alexei Moiseev said this week, according to Interfax.
