&

THE CBERRY PROTOCOL – CONTENT SHARING SYSTEM ON THE BINANCE SMART CHAIN

Bitcoin broke below the £38,355 support on March 25 but the bears could not crack the 50-day SMA support. This could have attracted sharp buying from the bulls and short covering from the bears who went short below £38,355.

The BTC/GBP pair rose back above the 20-day EMA on March 26, indicating the breakdown was a bear trap. On March 29, the bulls pushed the price above the downtrend line. If they can sustain the breakout, the pair may retest the all-time high at £44,238.

A breakout of the all-time high will signal the resumption of the uptrend, with the next target objective at £50,000. The upsloping moving averages suggest advantage to the bulls but the negative divergence on the RSI signals caution.

The bears are unlikely to give up without a fight. They will mount a stiff resistance in the zone between £42,000 and £44,238. If the price turns down from this resistance zone and breaks the 20-day EMA support, the bears will again challenge the 50-day SMA.

Repeated retests of a critical support level tend to weaken it. Therefore, the next dip toward the 50-day SMA might break it. If that happens, the pair could start a deeper correction to £31,005.

The chart setup looks like the price may remain range-bound with a negative bias. Hence, we are not recommending any fresh long positions at the current levels.

Lastly please check out the advancement's happening in the cryptocurrency world.

Enjoy the issue!

WEEKLY CRYPTOCURRENCY MARKET ANALYSIS

Hello, Crypto Traders welcome to this week's 175th edition of Cryptonaire Weekly. The overall Cryptocurrency Market Cap stands at \$1.82 Trillion. We have seen a \$130 Billion increase in the Market Cap since the last week. Bitcoin price is currently around \$57,725 from \$53,950 since last week and has increased by 7% and Ether price is now at \$1,805 from \$1,677 since last week and has increased by 7.63%. The current market cap for bitcoin is \$1.07 Trillion, and for Altcoins, the current market cap is \$75 Billion.

Visa Inc announced on Monday that it is running a pilot where it will allow its partner payment and crypto platform Crypto.com to settle transactions done on its payment network using cryptocurrency USD Coin. Visa plans to introduce this facility to its other partners in the future. This is a major boost to cryptocurrencies as it will increase the use of digital assets as a payment system in the real world.

However, Ray Dalio, the founder of the \$150 billion hedge fund Bridgewater Associates, said to Yahoo Finance that every country wants to preserve its monopoly and does not want other monies to be competing or operating. Therefore, Dalio believes that Bitcoin will be outlawed similar to how gold was in 1934 by the Gold Reserve Act.

Contrary to Dalio's view, ARK Invest CEO Cathie Wood believes that Bitcoin is just getting started. While speaking at a CBOE panel, Wood said the time was ripe for a Bitcoin ETF with increasing demand from institutional investors. Wood said that the current valuation of \$1 trillion "is nothing compared to where this ultimately will be." The ARK CEO believes "the prime time" is just starting.

For Bitcoin to sustain at the current levels, a steady inflow of capital is needed. However, CoinShares data suggests the institutional demand may be weakening. In the week ending March 27, the net inflows into cryptocurrency investment products was only \$21 million, the lowest since October 2020. If the flows weaken further, the major cryptocurrencies might enter a corrective phase.

FEATURES

Our goal is to be a store of contents with enough reward for content creators and platform participants in the best method possible.

- 
Content Creator Rewards
 CBerry rewards content creators and site participants for their contribution and effort
- 
Binance Smart Chain
 CBY token is built on the future of Decentralisation and Decentralised Finance
- 
DeFi Services
 CBerry will offer DeFi services which include Swap and Loan to support the reward system
- 
Advertisement Yield
 Revenue from advertisement will be used to support the token and to incentivise users

CRYPTO TRADE OPPORTUNITIES

BITCOIN - BTC/GBP

COINBASE:BTCGBP, 1D 41706.58 ▼ -69.42 (-0.17%) O:41780.80 H:41876.00 L:41408.58 C:41706.58

Bitcoin broke below the £38,355 support on March 25 but the bears could not crack the 50-day SMA support. This could have attracted sharp buying from the bulls and short covering from the bears who went short below £38,355.

The BTC/GBP pair rose back above the 20-day EMA on March 26, indicating the breakdown was a bear trap. On March 29, the bulls pushed the price above the downtrend line. If they can sustain the breakout, the pair may retest the all-time high at £44,238.

A breakout of the all-time high will signal the resumption of the uptrend, with the next target objective at £50,000. The upsloping moving averages suggest advantage to the bulls but the negative divergence on the RSI signals caution.

The bears are unlikely to give up without a fight. They will mount a stiff resistance in the zone between £42,000 and £44,238. If the price turns down from this resistance zone and breaks the 20-day EMA support, the bears will again challenge the 50-day SMA.

Repeated retests of a critical support level tend to weaken it. Therefore, the next dip toward the 50-day SMA might break it. If that happens, the pair could start a deeper correction to £31,005.

The chart setup looks like the price may remain range-bound with a negative bias. Hence, we are not recommending any fresh long positions at the current levels.

ETHEREUM - ETH/GBP

Ether has formed a symmetrical triangle, which generally acts as a continuation pattern and the breakout happens in the direction of the prevailing trend before the pattern was formed.

In this case, as the trend was up before the formation of the pattern, we can expect the breakout on the upside. If that happens, the ETH/GBP pair could retest the all-time high at £1,456.18. A breakout and close above this resistance could result in a rally to the pattern target of £1,872.

However, the flat moving averages and the RSI above 56 do not indicate a strong momentum in favour of the bulls. If the price turns down from the resistance line of the triangle, the pair may spend some more time inside the triangle.

At times, the symmetrical triangle acts as a reversal pattern. Therefore, traders should wait for the price to either breakdown or break above the triangle before placing any positional trades.

Aggressive traders may buy on a breakout and close above the triangle, but use 50% of the usual position size. The rest of the position could be added after the price breaks above £1,456.18.

RIPPLE - XRP/GBP

XRP plunged on March 24 and broke below the moving averages. However, the positive sign was that the bulls did not allow the price to sustain the lower levels. They quickly bought the dip and pushed the price back above the moving averages on March 25.

The bulls will now try to drive the price above the minor resistance at £0.43561. If they succeed, the XRP/GBP pair could rally to £0.48718. This level may act as a stiff resistance, hence traders may book partial profits near this level.

We are not suggesting to book profits on the entire position because if the bulls can thrust the price above £0.48718, the pair could pick up momentum. The upsloping moving averages and the RSI in the positive territory indicate advantage to the bulls.

This positive view will invalidate if the bears sink and sustain the price below £0.35. For now, traders can keep their stop-loss at £0.30. The stops may be trailed higher after the bulls push the price above £0.43561.

CARDANO - ADA/GBP

Cardano remains stuck inside the £0.71001 to £1.07197 range. The bulls purchased the dip to the 50-day SMA on March 25 and pushed the price above the 20-day EMA on March 26.

However, since then, the ADA/GBP pair has been trading in small range days, indicating indecision among the bulls and the bears about the next directional move.

The flat 20-day EMA and the RSI just above the midpoint also suggest a balance between supply and demand. If the bulls push the price above £0.935, the pair may rally to the resistance of the range at £1.07197.

A breakout of this resistance could start the next leg of the uptrend, but such a move looks unlikely at the moment. On the downside, the bears will gain the upper hand below £0.71001.

The indicators are not pointing towards a clear directional move and the tight range price action also suggests indecision. However, if the uncertainty resolves with a sharp rise on the upside, short-term traders may buy at £0.94, expecting to book profits near £1.05. The stop-loss for this position could be kept below £0.84.

This trade should be attempted if the price breaks out with strength, else traders may remain on the sidelines.

BINANCE - BNB/GBP

The break below the 20-day EMA on March 25 was purchased aggressively, indicating strong demand at lower levels. Binance Coin has formed a symmetrical triangle pattern.

If the bulls can push the price above the triangle and sustain the breakout, the BNB/GBP pair could rally to the all-time high at £249 and then to the pattern target at £326.

The marginally rising 20-day EMA and the RSI above 58 indicate a slight advantage to the bulls. Traders may consider initiating long positions on a close above the triangle with the initial stops placed below the support line of the triangle.

Contrary to this assumption, if the price turns down from the resistance line of the triangle, the pair may consolidate inside the triangle for a few more days. The trend will turn in favour of the bears if they can sink the price below the triangle. In such a case, a drop to £130 is possible.

ADVANCEMENTS IN THE CRYPTOCURRENCY WORLD

Visa Starts Settling USDC Stablecoin Payments on the Ethereum Blockchain

Payments giant Visa has announced it is now settling payments in the USDC stablecoin on the Ethereum blockchain, becoming the first major payments network to use a stablecoin as a settlement currency.

According to Business Insider, Visa piloted the USDC payment option via cryptocurrency exchange Crypto.com, which will now be able to manage its crypto debit card business entirely in digital assets. Visa's standard settlement process required the firm to settle in fiat currency, adding costs and complexity to its operation.

Now Crypto.com will be able to settle transactions using USDC directly and as such, it won't have to convert to fiat currency. Visa's chief product officer Jack Forestell said:

The announcement today marks a major milestone in our ability to address the needs of fintechs managing their business in a stablecoin or cryptocurrency.

Kraken's Dan Held Says Arrival of Institutional Herd Could Ignite Intense Bull Market

Institutional investors may usher in the most extreme portion of the Bitcoin bull market yet, according to Kraken's growth lead Dan Held.

In a lengthy Twitter thread, Held tells his 164,000 followers that Bitcoin is rapidly attracting institutional investors that could add trillions of dollars of value to the market.

"The herd is here. Institutions manage \$100 trillion, and now some of that is flowing into Bitcoin.

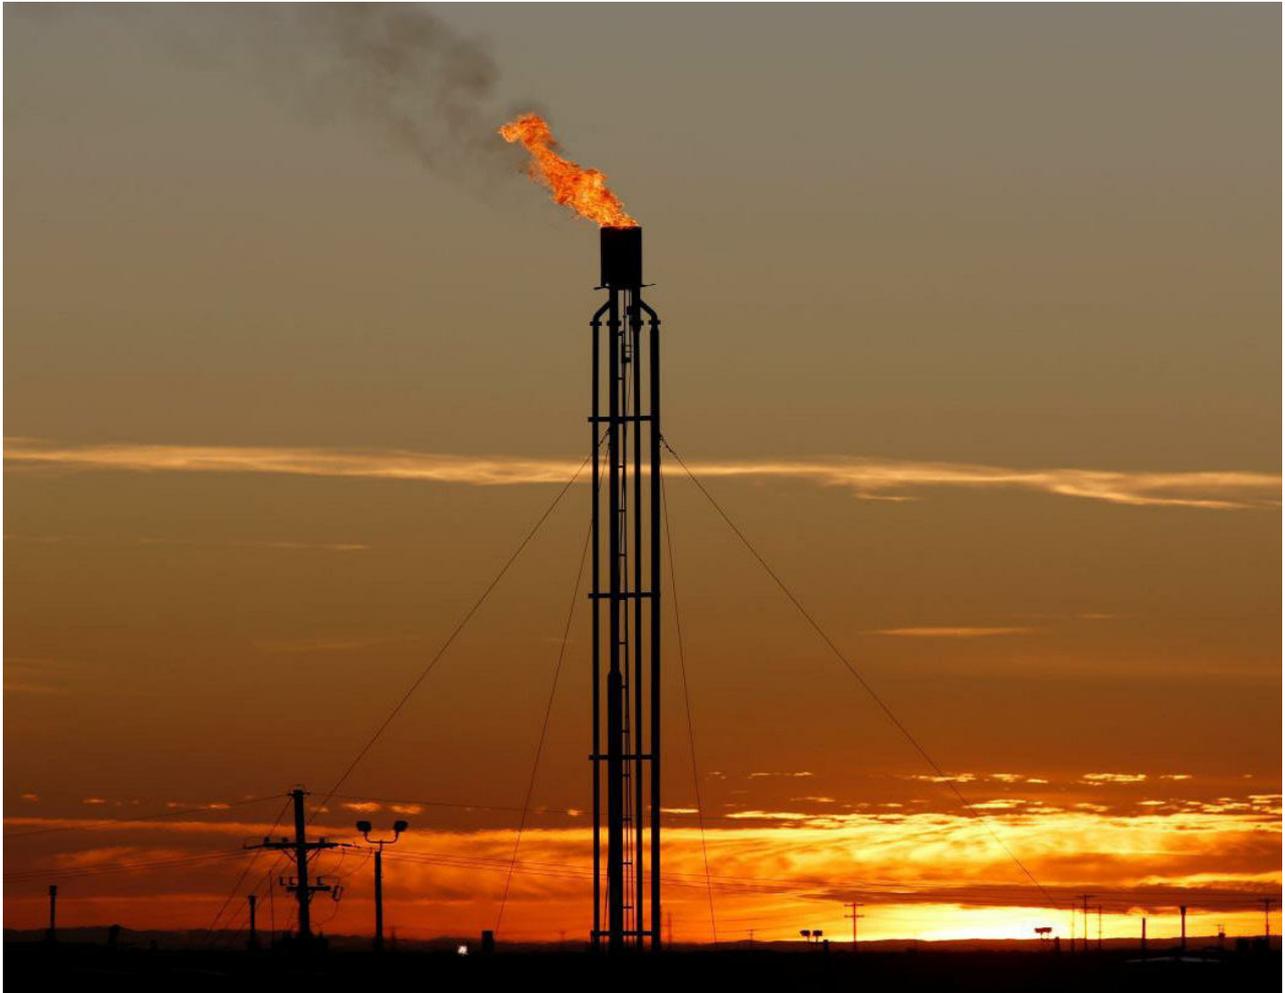

As institutions provide access to Bitcoin and buy it, it reduces the availability of Bitcoin to purchase."

Held points out that the level of institutional Bitcoin trading that Coinbase has seen since the fourth financial quarter of 2019 has been growing at an alarming rate, especially going into Q4 2020.

"A more concrete way to measure the rise of institutions is through Coinbase's S-1 filing which had a chart breaking out institutional vs retail trading volume. As we can see, the rise of institutions started in Q2 2019 and has been ramping up in Q4 2020."

The pandemic is turning fracking companies into Bitcoin miners

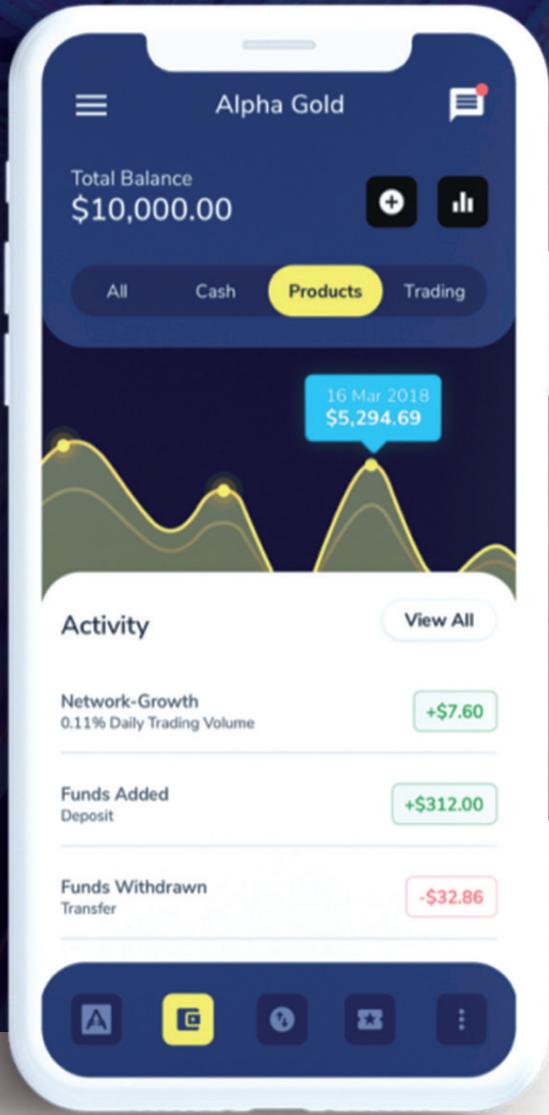

In 2018, the global cryptocurrency market had crashed, and Sergii Gerasymovych was looking for a way to keep his Bitcoin mining company afloat. He eventually settled on a plan to make money while cleaning up two notoriously climate-polluting industries.

Gerasymovych's biggest headache—as for all Bitcoin miners—was the price of electricity. Bitcoin miners compete against one another to unlock coins by solving increasingly difficult math problems with fleets of computers. This consumes a lot of power globally: about as much as Argentina each year. Bitcoin miners' profit margin largely relies on the gap between electricity bills and Bitcoin's value; if the latter drops, the only way to make up the margin is to curb the former. That's why so much of the world's cryptocurrency mining is tied to low-cost coal and hydroelectric plants in Asia. Gerasymovych was hunting for cheap power in the US, and stumbled on an intriguing source: Flare gas from natural gas wells. Now, a number of market trends are converging to propel a nascent industry in gas-powered Bitcoin.

Freeway Tokens (FWT) are currently trading on 4 exchanges:

Analyst says 'Alt Season' is here; here's what this could mean for Bitcoin and Ethereum

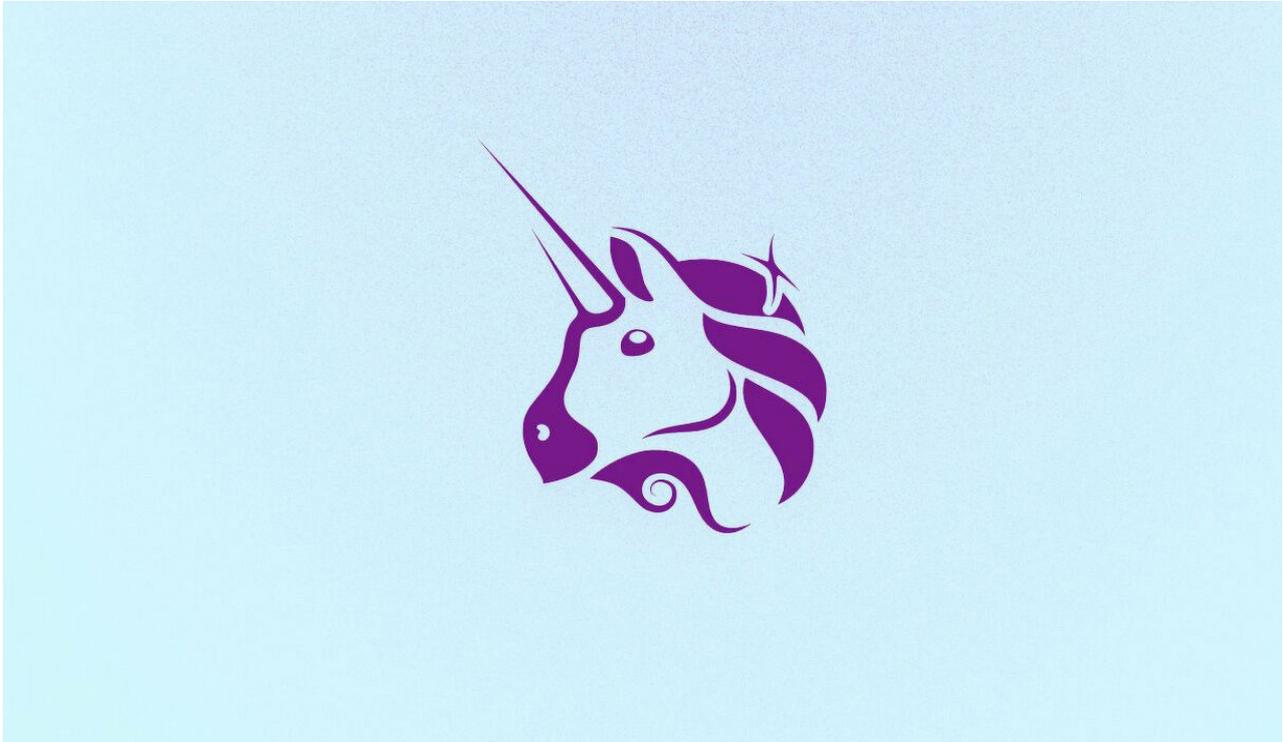

Two months ago when Bitcoin began a rally in January, the flagship crypto reached new ATHs and remained steady over the \$30,000 range for a long time. At the time, data from Longhash revealed that in a week's time, 92% of crypto tokens had "outperformed Bitcoin." The phenomena marked the beginning of an 'alt season' with many experts predicting that alts such as Ether and ADA could continue to reign supreme.

After gaining much mainstream attention and surging by trillion dollars in market cap, Bitcoin quickly outperformed the alts. However, trader and analyst 'Filbfilb,' (who is co-founder of Decentrader) has now said that a second alt season has arrived. The analyst published his data in a tweet on 29 March that showed:

As seen earlier in January, the current "alt season" begins amid yet another massive Bitcoin price correction. Over the past two weeks, Bitcoin has shed roughly over \$10,000 after its record-breaking ATH of more than \$61,000. Moreover, btc dominance has declined and is currently at 59.39%, as of 29 March. This would be the lowest in the past three months. Meanwhile, the total market capitalization of altcoins has surged close to 750 billion.

Uniswap Trading Volume Exploded by 450% to \$7 Billion

A new DeFi project called Delta launched on Uniswap. Its rebasing system has made trading volume on the decentralized exchange appear higher than normal.

Trading volume on decentralized exchange Uniswap has jumped 450% over the last 24 hours. Total volume, per statistics on Uniswap.info, is \$7.17 billion, compared to \$1.6 billion yesterday. The previous daily record was \$2.19 billion on October 26, 2020.

The token responsible for most of today's volume is DELTA. In the last 24 hours, it's done \$6.13 billion in trading, or 85% of the total volume, despite only \$16.4 million in liquidity.

The new record, alas, won't stand. Uniswap creator Hayden Adams wrote on Twitter that the statistics DELTA has accumulated will not count toward the DEX's global volume because of a quirk of Delta's protocol. After that change, real trading volume is at around \$1.05 billion, a fairly normal day for Uniswap.

Delta may not ring a bell because it's new. Its token, which resides atop the Ethereum blockchain, just launched yesterday. To get it without staking, you have to use Uniswap.

Delta calls itself "an on-chain options layer which utilizes a combination of liquidity standards to reduce premiums and offer competitive options prices." More simply, options trading becomes expensive and volatile when there's a lack of liquidity; Delta says it wants to fix this.

“The US Government Will Never Ban Bitcoin”: Tyler Winklevoss Opposes Ray Dalio

Tyler Winklevoss isn't buying into speculations that the United States may at some point close its doors against Bitcoin. He made this known in a recent Twitter post, in which he explained that the process of reviewing Bitcoin's structure as an asset has already been carried out by the authorities set aside for that task. Tyler Winklevoss does not believe that there is anything else the government will come back for, implying that the job of cross-checking has been done and dusted.

As seen on his Twitter Feed:

“The US government will never ban Bitcoin. These questions have been asked and answered by regulators and courts for the last decade. This ship has sailed.”

Tyler Winklevoss's convictions are quite different from that of the Billionaire Ray Dalio, who recently sent shock waves to Bitcoin-Twitter when he opened up about plans he thinks the government may have for Bitcoin in the future.

Even if Ray didn't at any point conclude that the government would eventually carry through with a ban, he made some notable points supporting why it is objectively possible for the government to make Bitcoin a target. At a point when Bitcoin is considered a threat to the USD, the government may want to put a strain on it, so as to help the USD flourish, He tells.

Bitcoin can reach \$400K in 2021 as 'risk-off reserve asset' — Bloomberg

With institutions demanding protection from inflation and dollar depreciation, historical trends could see BTC/USD 8X from current prices, says Bloomberg Intelligence.

Bitcoin (BTC) still gets criticized for being too volatile, but one Bloomberg analyst believes that it conversely is becoming a “risk-off” choice for investors.

In a tweet on March 25, Mike McGlone, senior commodity strategist at Bloomberg Intelligence, said that this year marked a watershed moment for the largest cryptocurrency.

\$400,000 BTC would “rhyme” with history

McGlone uploaded a chart of the BTC/USD average price and the Bitcoin Liquid Index, a price ticker specially created for institutional use.

“Well on its way to becoming a global digital reserve asset, a maturation leap in 2021 may be transitioning Bitcoin toward a risk-off asset, in our view,” he wrote.

A potential price peak this year, with previous behavior as context, could be as much as \$400,000 per coin, the chart shows. This dwarfs other estimates, such as that of stock-to-flow, which calls for an average of \$288,000 between now and 2024.

Chainalysis Raises \$100 Million with a \$2 Billion Valuation, No Plans to Go Public Yet

Blockchain research and analysis firm Chainalysis is the latest company in the crypto industry to raise funds. The firm has raised \$100 million from investors led by Paradigm, co-founded by crypto exchange Coinbase co-founder Fred Ehsram.

TIME Ventures, the investment fund of billionaire Marc Benioff also participated in the funding round along with the previous backers, Addition, and Ribbit.

The new investment came just on the back of a \$100 million investment in November, bringing Chainalysis's valuation at more than \$2 billion.

The New York-based company helps private firms and government agencies process and mine blockchain data for analysis recorded on blockchains to root out "*cryptocurrency crime and money laundering.*"

The company aims to use the raised funds for hiring across all parts of the organization and expand its product portfolio to provide new data solutions.

Chainalysis is building solutions for cryptocurrency businesses and financial services providers to optimize their market development strategies based on on-chain customer behaviors, help asset managers use on-chain data to discover crypto investing opportunities, and government agencies connect on-chain activity to other data sets.

Nasdaq-Listed Canadian Firm Mogo Launches Bitcoin Cashback Mortgage Program

Mogo Finance Technology Inc., a Canadian fintech firm listed on Nasdaq (NASDAQ:MOGO) and Toronto Stock Exchange (TSX:MOGO), is now giving its members who take out a new mortgage or refinance an existing one the chance to earn cash to buy bitcoin using its bitcoin (BTC, +3.35%) rewards account.

In an announcement on Monday, Vancouver-based Mogo said the cashback rewards program now includes “MogoMortgage” and will give users up to C\$3,100 (US\$2,461) in cashback rewards. The rewards are distributed in dollars into clients’ accounts which, in turn, allows clients to buy bitcoin through the MogoCrypto program within the Mogo app.

Canada’s residential mortgage market is estimated at C\$1.7 trillion (US\$1.35 trillion). According to the company, this new scheme allows Canadians to get a mortgage while earning a cash reward to purchase bitcoin.

“Given the volatility and speculative nature of bitcoin, there’s an increasing number of Canadians who are looking for ways to participate without risking their own money, and our bitcoin rewards program meets this demand,” said David Feller, CEO of Mogo.

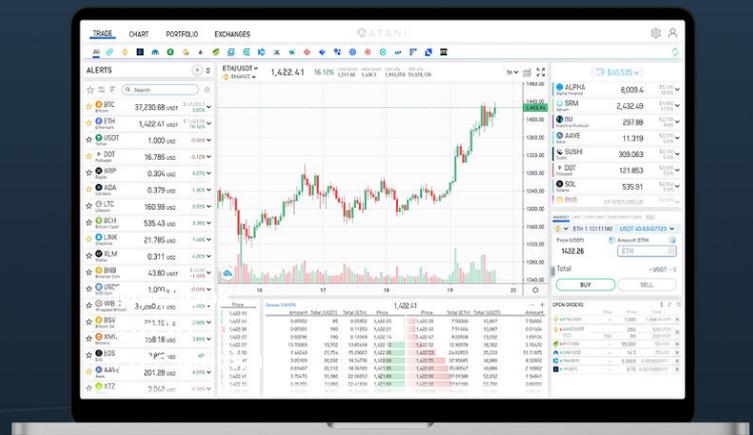

MogoMortgage is currently available to Mogo Members in a number of selected provinces including Alberta, British Columbia, Manitoba, Ontario, New Brunswick, Nova Scotia, Prince Edward Island, and Newfoundland and Labrador.

Japanese bank Sumitomo Mitsui launches the country's first 'a-1' rated security token

Sumitomo Mitsui has partnered with Securitize to launch Japan's first security token that complies with the country's Financial Instruments and Exchange Act.

Japan-based bank Sumitomo Mitsui Trust Bank, or SMTB, has launched its first asset-backed securities token in partnership with Securitize on March 29.

The instrument is the first security token compliant with the Financial Instruments and Exchange Act (FIEA) to launch in the Japanese Market. The token has received an "a-1 rating" from Japanese rating agency, Rating and Investment Information, Inc, suggesting the product is very likely to fulfill its short-term obligations.

The token was created by tokenizing paper-based beneficiary certificates representing investor ownership to an underlying asset. SMTB has also created a trust company to manage its underlying securitized investments.

SMTB issued the product using Securitize's security tokenization platform. Securitize was founded in the United States in 2017, before launching a Japanese division that secured investment backed from some of the country's leading companies including Sony, SBI, and Softbank.

ATANI – A TOP CRYPTO TRADING TERMINAL

Atani is a crypto trading terminal for cryptocurrency investing born in 2019 between London, Madrid, and Barcelona. It's a trading platform invented to solve some of the major inconveniences faced by serious cryptocurrency traders. These problems include executing trades using multiple exchange terminals and applications, also having to invest a lot of money in different types of trading tools. Before diving deeper into what Atani is all about, it's good to start from the beginning of what made it come to be: the problem.

TRADING CRYPTOCURRENCY CAN BE A DIFFICULT WITHOUT A PROPER CRYPTO TRADING TERMINAL

The lack of appropriate and proper tools when trading can be a massive hurdle for any cryptocurrency trader to handle. It can lead to spending more money than you get from trading. Instead of making profits, you're continuously making losses and more losses rather than gains or profits.

This can lead to bankruptcy, stress, or even having some suicidal thoughts if all goes against you in some rare cases.

Proper cryptocurrency investing tools can help a lot in getting real-time market prices of commodities, manage your risks, make proper orders, and you can even make tons of profits compared to losses.

With Atani, you have your back covered since it unifies everything into one crypto trading terminal. It has over 9,000 cryptocurrency trading pairs across over twenty leading crypto exchanges. You'll delve into this a little later on in this article; for now, check out what a cryptocurrency trading terminal should include.

WHAT SHOULD A CRYPTO TRADING TERMINAL INCLUDE?

For you to know you've chosen the right crypto trading terminal for your cryptocurrency investing, these are the things to look for to feel rest assured you've chosen the right platform.

Responsiveness- Many cryptocurrency traders never pay attention to one of the most crucial aspects in crypto trading, and that's the slippage. For instance, when a crypto trader places a stop-order and the crypto asset experiences high volatility, the result is a gap that could lead to a worse value of what was to be executed.

Because of these orders with high volatility, such orders are hard to execute at the intended price though they will be executed at the next possible price. There will always be unnoticed differences in the prices of the traded crypto.

Trading with a terminal offering responsiveness will not only allow you to stop-order where appropriate but also take-profit order and you can benefit dramatically from this.

Reliability- Subject to what individuals' hardware and software types, a crypto trader may prefer a desktop app or a web-based app. Perceiving what type of terminal fits you best is perilous for cryptocurrency investing.

Something worth noting is that a crypto trader should ensure that the crypto trading terminal they use doesn't freeze or crash frequently, especially during hot global economic events when crypto traders require stability.

User- friendly interface and User-friendly experience- the term user-friendly here in crypto trading terminal implies ease of placing an order or closing a trade at an instant. One-click crypto trading and management of the stop-loss orders, limit orders, and the other types of orders are benefits a cryptocurrency trader may take into account or look for in a crypto trading terminal.

Furthermore, it helps for the full navigation of the crypto trading terminal, making it more user-friendly. If the trading terminal provides supplementary charts and tools, they should be justly easy to access and enhanced for the quick opening of multiple graphs simultaneously.

This point is an important one for aggressive cryptocurrency traders who depend more on the trading terminal than a moderate trader.

Analysis Tools- the key to educating yourself on how operative your crypto trading system is and how to modify it is being able to study your cryptocurrency trades after running their course. It would be hard to earn massive profits consistently without using the analysis tools.

You'll practically be cryptocurrency investing in the dark if you don't use any crypto trading analysis tools.

Automatic trading- Some crypto trading terminals provide algorithms that can be used to give recommendations regarding the crypto investments to make as well as permitting you to key in your algorithms that will automatically place orders. The placement of these orders only takes place when certain preloaded or predefined conditions are met.

You should double-check these algorithms, but once you see their potential to lead to profits, begin allowing the software to make your crypto investments automated and at the amount you outline.

Security of Data- this last point is the most important one. You require to prevent and safeguard your data from getting into the wrong hands. As a crypto trader, you don't want your data compromised by anyone. The trading terminal you choose should provide security for all of your information (including all your trading data).

The trading terminal you select to make your crypto trades should be as secure as possible. You must check the kind of data encryption the trading terminal of your choice uses, and this gives you some understanding of how well your information will be protected as it goes through the web or the internet.

Known and trustworthy trading terminals use firewalls both on their servers and their level of applications. Further, they hire the use of TWO separate synced servers onto which trading information and the trader's data are stored. This allows any lost data from any of the servers to be recovered from the other.

Now that you've known all that's required to spot in a crypto trading terminal before cryptocurrency investing, as earlier stated, it's time to delve into the Atani cryptocurrency trading terminal.

THE ATANI CRYPTO TRADING TERMINAL

As you earlier read, the goal of inventing the Atani trading terminal was to solve the problems faced by most cryptocurrency traders. And that's the inconveniences of executing crypto trades through multiple exchanges, investing time and hard-earned money in multiple trading tools that even don't benefit traders as expected.

Atani comes in the form of a desktop application, and with it comes a range of features with a target of making asset management and cryptocurrency trading more effective.

WHAT ATANI IS

It's a cryptocurrency trading platform with lots of beneficial features created to assist crypto traders to invest in cryptos, manage their portfolios, and manage their tax accounting and reporting by using a unified terminal.

Atani has built a good name for itself since it is known to be one of the most promising blockchain start-ups in Europe. The firm has earned itself a promotion on TechCrunch, and it made it to the finals round at the Mobile World Congress in 2020. Its success has brought Atani to the map, making it known as a promising investment option in Venture Capital circles.

FEATURES YOU GET FROM USING ATANI

As you already earlier, Atani seems to have solved the problem faced by crypto traders, trading on multiple platforms, by providing a single unified solution (the terminal) where you can conduct all your trades without having to worry about leaving the platform. It offers unique features that make this possible. So without wasting more time, it's time to look at each of them one by one.

Features You Get From Using ATANI

- Trading Terminal**
Trade on 20+ exchanges, compare prices and find the best rates
- Real-time Alerts**
Receive real-time SMS, phone calls and email alerts so that you never miss a trade again
- Charts & TA**
Track trends and perform technical analysis on 1,500+ cryptocurrencies and 9,000+ pairs
- Tax Reports**
Make tax season headaches a thing of the past with our 1-click downloadable tax reports
- Security**
Trade securely! We can't access your funds or API keys and we don't require any personal information

PLATINUM CRYPTO ACADEMY

ATANI

CRYPTONAIRE WEEKLY CRYPTO INVESTMENT JOURNAL

1.IT HAS 9,000 CRYPTOCURRENCY PAIRS ACROSS OVER 20 LEADING EXCHANGE TERMINALS

Atani, as of March 2021, supports trading for more than fifteen hundred cryptocurrencies and nine thousand trading pairs over more than twenty exchange terminals. The well-known exchange terminals currently integrated with its app are OKEx, Binance, Huobi, Bitfinex, Kraken, and Coinbase.

What this means is if you're currently using a combination of any of these exchange terminals, you are now able to trade on all of them using the Atani terminal.

2.REAL-TIME PORTFOLIO ALERTS

The Atani application can also be used to set price alerts for the aforementioned crypto pairs across the different supported exchange terminals. Your portfolio value is available in more than forty currencies. Instant price alerts can be sent to you through emails (up to 1,000), SMS (200 messages), and phone calls (30 calls). All these are allowed per month.

3.CHARTS AND ANALYTICS

The Atani trading terminal has included some of the handiest TradingView implements into the application. A crypto trader can simply distinguish chart types, other metrics, and technical indicators for profound understandings of your portfolio. Atani currently supports more than eighty technical indicators, seven types of charts, and more than fifty charting tools.

4.AUDITED TAX REPORTS

Atani trading terminal can automatically produce tax reports. Currently, it provides tax reports attuned with tax regimes in thirty countries across Europe, Asia, and America.

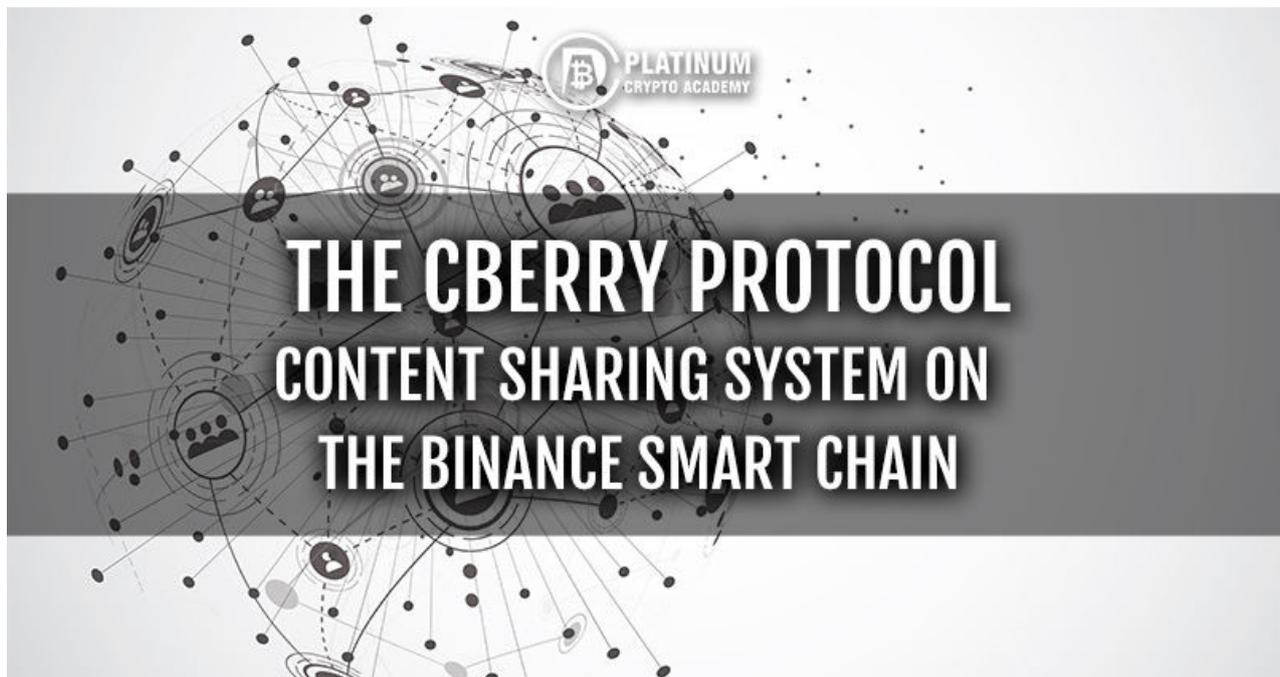

5.PRIVACY AND SECURITY

Atani allows you and only you to have full access and control over your APIs. In terms of privacy, a KYC or any other document isn't required when registering with the terminal.

ATANI CRYPTO TRADING TERMINAL – CONCLUSION

If indeed you are serious about cryptocurrency investing, then Atani is the best crypto trading terminal for you since its features allow you to trade on multiple exchanges in one platform.

CONTENT CREATOR REWARDS EARN MORE FOR CONTENT – CBERRY DEFI ECOSYSTEM

What is CBerry Protocol?

CBerry protocol is a content sharing system that uses blockchain technology, and it runs on the Binance Smart Chain. The users or members of this platform are rewarded with the tokens CBY and CBR. Users can also be tipped using these tokens for any quality content they share. The CBerry protocol has incorporated Decentralized Finance Swap (DeFiSwap) and a Loan infrastructure for solid content creation and a rewarding ecosystem. CBerry's main goal is to become the most rewarding and stable content creation terminal running on blockchain technology. Before delving deeper into CBerry protocol, first look at the problems faced by the normal content sharing platform.

PROBLEMS CBERRY PROTOCOL AIMED TO SOLVE

Non-Blockchain-related content sharing platforms like Facebook, Twitter, YouTube, Tiktok, and others have always been the most successful content sharing terminals. These platforms are often known as social media platforms. Social media platforms are the terminals that only reward those who have amassed a large number of followers and the views gotten from their content.

Most of the social media platforms are guided by stern rules that mostly flag crypto-related content as illegal. This prevents the full crypto expressions by cryptocurrency enthusiasts on those social media platforms.

Steemit is the only content-sharing platform that runs on blockchain technology. It will be amusing to know that this platform isn't the only content-sharing terminal that runs on the blockchain network. There were numerous others like Steemit, but instead of flourishing, most of them ran out of business in a short time.

This is because content sharing and the reward system are difficult to sustain, especially when you want it to be more gratifying. Here are some of the problems that these platforms faced and made them unable to sustain the system.

1. Poor funding- this is one of the major problems faced. To maintain a paying platform for content creators, the content terminal must be well-financed. A concrete financial backing ensures the successful execution of the project and the ecosystem.

2. Poor management- this is another problem that's commonly faced by novice blockchain content sharing terminals. Building any content sharing terminal needs devotion as a carefully crafted out ecosystem should be carefully drawn out and implemented. Poor management means that the terminal won't be as successful as the creators want it to be.

3. Poorly designed ecosystem- this one here is the gravest problem that faces start-ups created for content sharing. Incentivizing the users of the content sharing terminal with real cash is a pressure on the sustainability of the project.

All the existing content sharing terminals have an existing issue that either prevents them from expanding or doesn't fit what the users need. There's an issue where the new users are receiving little to no reward when they create and post valuable and engaging content.

These social systems are centred on social recognition; it's only the users with the most followers who receive the reward. But for novice users, recognition and having many followers is quite a hurdle. It's often difficult for new users to get rewarded compared to those who already have built a reputation on the platform.

THE CBERRY PROTOCOL SOLUTIONS FOR THE PROBLEMS

CBerry Protocol integrates a dense network that will supply the best and the most recompensing content creation reward platform on the blockchain. It has a stiff protection against reward devaluation and long-term hitches that have overwhelmed other related platforms.

The CBerry Protocol was premeditated after learning the complications encountered with other content creation platforms and then scrutinized by skilled sponsors so that the best conceivable platform is delivered.

CBerry's environment will condense reliance on the acknowledgment system so that users and content creators are rewarded properly; this will be reached by using secondary actions to support the credit of new users.

STEPS TO EARN REWARDS

1

Register on the platform

After registering on the platform, you'll be able to create and post your content on CBerry. The more likes you get on your published content, the more you'll earn rewards on that post. This reward is often paid in CBY and CBR tokens. Afterwards, the total amount is often distributed to both you and the ones that have liked your post after seven days of the post creation.

2

Create Content, Post and Get Like or Dislike

When you create and publish a post, the other users can either like or dislike the post. Liking the published post allocates some USD amount to the total earnings of the post. Disliking the published post removes some tokens from the total post-earnings. You (the author) and your likers share the total tokens earned on the post after the grace period (seven days).

EARNING DISTRIBUTION PERIOD

The Grace Period (seven days)

CBerry's users can always tip the post even before the grace period (seven days), and this period is also known as the **earning distribution period**. In the case of a tip, the amount will be deducted from the user that tipped the post and sent directly to the author that posted it.

There's a limit to the number of published content, likes, and dislikes a user can execute in a day. This limit is calculated from the user's CBY token balance, and the calculation will be explained in a short while.

PLATINUM CRYPTO ACADEMY

CRYPTONAIRE WEEKLY CRYPTO INVESTMENT JOURNAL

The content creation terminal will influence the Decentralized Finance protocol of the Swap and Loan system to provide in-trend services to users and, by that, safeguard the network's solidity.

Reward tokens in the CBerry network will be highly urbanized and maintained; many solid partnerships attained for these tokens will ensure their liquidity, usability, and real value.

The terminal won't be segment biased so that legal contents will be permitted and all the benefits of decentralization relished by the users.

All content types will be braced; this will include; audio, text, and video.

The tokens in the CBerry network will power the whole ecosystem. These tokens are the CBerry token (CBY) and the CBerry Reserve Token (CBR). They help alleviate minting and the market aftermath on each token.

HOW CBERRY OPERATES

After registering on the platform, you'll be able to create and post your content on CBerry. The more likes you get on your published content, the more you'll earn rewards on that post. This reward is often paid in CBY and CBR tokens. Afterwards, the total amount is often distributed to both you and the ones that have liked your post after seven days of the post creation.

Unlike other content sharing terminals within this sector, after creating and posting your content, you'll be tipped with CBY, CBR, and BNB tokens after a grace period of seven days. This allows you (the author) to continue earning on the post as long as it still exists on the terminal.

When you create and publish a post, the other users can either like or dislike the post. Liking the published post allocates some USD amount to the total earnings of the post.

Disliking the published post removes some tokens from the total post-earnings. You (the author) and your likers share the total tokens earned on the post after the grace period (seven days).

Something worth noting; the likes and dislikes will not deduct any amount from the people who have liked or disliked the published content. The amount to be awarded is solely allocated from the CBY and CBR token supply.

The calculation on what a post gets is often based on the likes and disliker's balance.

CBerry's users can always tip the post even before the grace period (seven days), and this period is also known as the earning distribution period. In the case of a tip, the amount will be deducted from the user that tipped the post and sent directly to the author that posted it.

There's a limit to the number of published content, likes, and dislikes a user can execute in a day. This limit is calculated from the user's CBY token balance, and the calculation will be explained in a short while.

CBERRY'S REWARD TOKEN

The members of the network like and dislike power is calculated on the user's CBY balance that's locked on the protocol. Here's how the calculation takes place:

When someone from the network likes the post, a specified amount is added to the earnings of the published content. And when they dislike the published content, a specified amount is deducted from the total earning of the published post. These calculations are based on the CBY token balance of the members who like or dislike the published post.

Here's an example of how an amount added to a like looks like:

Current USD value 0.2% of liker's CBY token balance.

And here's an example of how an amount deducted from a dislike looks like:

Current USD value 0.2% of disliker's CBY balance.

Something worth noting here is this amount isn't deducted from the liker's or the disliker's token balance of CBY. This balance is just used to calculate what to award to the published content. The amount given is assigned from the CBY and CBR supply assigned to the network.

THIS IS WHAT MAKES CBERRY DIFFERENT

THE REWARD DISTRIBUTION STRUCTURE OF CBERRY PROTOCOL

After the given grace period (seven days), the published post rewards are divided to the author (post's writer) and the ones that liked that published post. The post's writer often receives eighty per cent of the total earnings. Those that have like the post share the remaining twenty per cent according to the rules of sharing tokens set on the platform. A good way to do cryptocurrency investing without having to buy any crypto, don't you think?

The total USD reward gets distributed in CBY and CBR tokens according to the market price they're currently at during the distribution.

To lessen the minting effect on the market price, the majuscule payment token varies according to the situation in the market at the time of division of the reward tokens.

TOP 12 CONTENT SHARING SYSTEMS UTILIZING BLOCKCHAIN TECHNOLOGY

If you love cryptocurrency investing and you follow everything related to blockchain technology and crypto, then there isn't the slightest doubt that you've come across content sharing terminals running on this disruptive tech.

Moreover, these platforms reward you for sharing content on their network in crypto tokens. If you are a fan of cryptocurrency investing without having to purchase crypto, then this list of the top content sharing systems using blockchain technology will pique your interest:

- 1. CNBT**
- 2. arXiv**
- 3. LIBRY**
- 4. MEDIACHAIN**
- 5. REBEL AI**
- 6. FLUZ FLUZ**
- 7. STEEMIT**
- 8. CIVIL**
- 9. DOT BLOCKCHAIN MEDIA**
- 10. BONDED**
- 11. SAPIEN**
- 12. VEVUE**

These content-sharing platforms will interest you if you do love cryptocurrency investing.

CONCLUSION

All in all, this was to show you that aside from CBerry, there are other platforms just like it that allow you to earn crypto tokens while doing what you love- creating and sharing content. Aside from that, if you are enthusiastic about cryptocurrency investing but don't desire to trade any cash or buying crypto, then this is the best alternative for you. In the world of cryptos, there are a lot of ways you can make a profit from simply doing cryptocurrency investing. And this doesn't necessarily mean trading or holding crypto. You can simply create and share valuable and informative content to earn crypto as well.
