Weekly Cryptocurrency Market Analysis

During last week, the market was in an upward trend for most of the week.

The overall market cap increased to \$274 billion which is a 9% increase. Bitcoin is up 6% to \$6,700 while Ethereum's price increased 7% to \$480. The current market cap of Bitcoin is \$116 billion and for Alt Coins it is \$158 Billion. Bitcoin continued to outperform all altcoins and Bitcoin dominance remains unchanged at 42.5%.

Tom Lee co-founder for Fundstrat Global Advisors continues to be bullish on Bitcoin. He expects Bitcoin to trade roughly at 2.5 times the mining cost, which according to him will increase from the current levels of \$7,000 to \$9,000 by the year end.

From the technical analysis point of view the target levels from \$10,000 and \$12,000 are likely to be two price points that will be very difficult to cross for the bulls unless we witness a flood of institutional money being invested, then we will easily cross those resistance levels and see Bitcoin at \$15,000. While the retail investors are largely staying away in fear, the professional traders are taking advantage of the current downtrend as a buying opportunity to increase their portfolios.

CRYPTO COURSES

The Platinum Crypto Academy trading courses are comprehensive guides to Bitcoin and cryptocurrency trading and investing. Our courses cover everything from the basics of cryptocurrencies to the advanced trading strategies you'll need to succeed. Our 1-on-1 mentoring programmes ensure that you have access to truly professional trading knowledge, and learn all the skills necessary to be able to make cryptocurrencies a successful income stream.

Being etched into the Financial World for over 10 years, Platinum has provided trading education to 1,000's of individuals all over the globe, with offices in the UK, USA, Australia, and India. Making us well placed to help you become the next Cryptonaire!

The Platinum Crypto Academy is the first crucial step for anyone looking to enter and succeed in the world of digital currencies.

OUR PACKAGES INCLUDE:

The Platinum Foundation Programme

If you're looking to start your Crypto Journey, this is the perfect programme for you

The Platinum Masters Programme

This programme is designed for those who have already ventured into the crypto world, but are looking to improve their skills to enable themselves to make better decisions and more profitable choices.

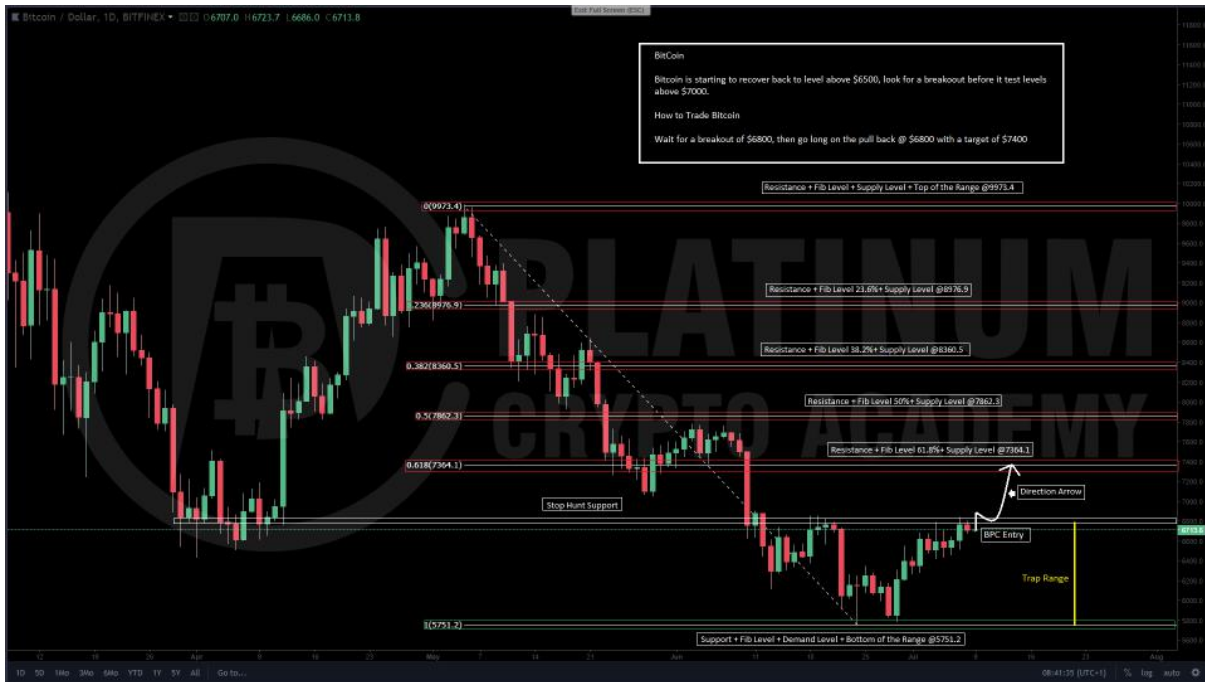

The Platinum Cryptonaire Programme

This is the complete offering for individuals who want not only to become a successful trader, but a prolific investor in the crypto space.

Advancements in the Cryptocurrency World

IBM Signs \$740 Million Deal With Australian Gov't to Use Blockchain for Data Security

<https://cointelegraph.com/news/ibm-signs-740-million-deal-with-australian-gov-t-to-use-blockchain-for-data-security>

IBM has signed a five-year AU\$1 billion (\$740 million) deal with the Australian government to use blockchain and other new technologies to improve data security, Bloomberg reports Thursday, July 5. The major contract will see IBM provide technology such as blockchain, automation and artificial intelligence (AI) to Australian federal departments, including defence and home affairs. IBM's Asia Pacific head, Harriet Green, told Bloomberg that the new partnership will give Commonwealth citizens access to the "world's greatest technologies" "across many, many government agencies." The new partnership will catapult Australia to "the top three of digital governments in the world," she suggested. In her interview, Green placed repeated emphasis on ensuring data security for citizens - for which blockchain's central offering of an immutable and encrypted ledger is a cornerstone innovation. Green also saw the deal as a major step in Australia working towards a "paperless future" across different realms of the state's jurisdiction, including taxation and border control.

Binance Donates \$1 Million Towards Victim Relief for West Japan Floods

<https://www.ccn.com/binance-donates-1-million-towards-victim-relief-for-west-japan-floods/>

Binance, the world's largest cryptocurrency exchange, pledged \$1 million for the victims of the floods in West Japan. In an official post, Binance stated: "To help out the victims in West Japan that were affected by the heavy rains on 7/7/2018, Binance is donating \$1,000,000 USD and calling for our crypto friends and partners to join us in the relief initiative." On Saturday Japan has been hit with unprecedented rainfall causing floods and landslides. According to a BBC report, More than 60 people have died and about a dozen people have been missing since. PM Shinzo Abe has ordered the evacuation of two million people in the disaster-prone areas. Binance has urged users who'd like to donate to the cause to send ETH or ERC-20 tokens to the wallet mentioned in their official post.

Policy Easing, New Crypto Classification in South Korea

<https://news.bitcoin.com/korean-regulations-policy-easing-crypto-classification-central-bank-report/>

South Korea has been actively revising and updating its regulations for cryptocurrencies. The Korea Times reported last week that the country's top financial regulator, the Financial Services Commission (FSC), has revised "its guidelines relating to 'all activities' of Korea's leading cryptocurrency exchange operators." Furthermore, "financial regulators plan to ease rules on crypto-based assets in line with policies initiated by G20 nations to establish unified regulations," the publication detailed. Korean Regulations Update: Policy Easing, New Crypto Classification, Central Bank Report However, an FSC official told the news outlet that "Any major reversal in policies is unlikely." Specifically, the policy change will not affect the way cryptocurrencies are classified for regulatory purposes. "The administration earlier classified cryptocurrencies as 'non-financial products' due to their speculative nature," the news outlet conveyed, emphasizing: The FSC and FSS [Financial Supervisory Service] will not change the government's stance on crypto or digital assets as it's difficult to value them as 'financial assets'.

Mining Giant Bitmain Valued at \$12 Billion in New Funding Round

<https://www.coindesk.com/report-mining-giant-bitmain-valued-at-12-billion-in-new-funding-round/>

Bitcoin mining giant Bitmain has reportedly closed a Series B funding round that values the firm at approximately \$12 billion. Chinese news outlet Caixin reported on Friday, citing anonymous sources familiar with the deal, that although the exact number of the new equity financing is unknown, it's somewhere between \$300 million and \$400 million. According to the report, leading investors in the new round include Sequoia Capital China, U.S. hedge fund Coatue as well as EDBI, a Singapore government-backed investment fund. The news comes nearly a year after Bitmain raised \$50 million in a Series A funding round, led by Sequoia Capital China and IDG Capital, as previously reported by CoinDesk. Caixin's report also indicated that Bitmain is currently conducting a pre-IPO funding round and could go public on the Hong Kong Stock Exchange in the future. The news, if true, would make Bitmain another Chinese bitcoin mining giant seeking an initial public offering (IPO).

German Bank Offers Special Accounts to Cryptocurrency Firms

<https://news.bitcoin.com/german-bank-offers-special-accounts-to-cryptocurrency-firms/>

The Berlin-based Banking-as-a-Platform (BaaP) institution Solarisbank has recently announced the launch of their new banking service plan that's focused on clients from the blockchain and digital currency industry. The newly featured resource called the 'Blockchain Factory,' will offer financial management services to companies whose business operations deal directly and indirectly with cryptocurrency solutions and blockchain technology. Over the past few years as cryptocurrencies have gained in popularity a few companies like exchanges and brokerage services that deal with digital currencies have had issues with their banking providers. Banks and other financial management services have ceased their partnerships with cryptocurrency firms and have closed business accounts making it very difficult for blockchain companies to establish reliable banking partners. Now the German financial tech company, Solarisbank, plans to offer a service called the 'Blockchain Factory.' Companies who deal with cryptocurrencies will now have a solid banking colleague who understands the technology.

Winklevoss Twins Hire Former NYSE Tech Executive as CTO of Gemini Exchange

<https://cryptoslate.com/winklevoss-twins-hire-former-nyse-tech-executive-as-cto-of-gemini-exchange/>

With a rising interest in blockchain, global talent continues to migrate away from traditional finance and towards the new digital economy. Following an industry trend, the Winklevoss twins hired former NYSE executive Robert Cornish as Gemini exchange's first Chief Technology Officer. On July 6, 2018, Gemini cryptocurrency exchange hired former Chief Information Officer at NYSE Robert Cornish as its first Chief Technology Officer, according to Bloomberg. In the official press release, Gemini CEO Tyler Winklevoss stated: "Rob is a tremendous addition to our team. He will ensure that Gemini continues to deliver the best platform experience to our customers as possible and set the standards of excellence for the cryptocurrency industry as a whole."

Youtube Dragged Into Bitconnect Class Action Lawsuit for Failure to Protect Victims

<https://news.bitcoin.com/youtube-dragged-into-bitconnect-class-action-lawsuit-for-failure-to-protect-victims/>

Youtube has been added as a defendant in a class action lawsuit against Bitconnect recently, evident by publicly available documents filed with the Southern District Court of Florida. According to the lawsuit, the Google-owned video platform failed to protect or warn its users from Bitconnect affiliates' promotional material, which reached over 70,000 hours and 58 million views on Youtube. "Several of the Affiliate Promoter Defendants had partnerships with YOUTUBE pursuant to which the BITCONNECT Defendants disseminated fraudulent and harmful content unsuspecting victims across the globe. YOUTUBE was negligent in failing to warn those victims of the harmful content for which YOUTUBE compensated their creators and publishers," the document alleges. Another segment reads: "In short, aided by YOUTUBE's negligent failure to warn, the BITCONNECT Defendants defrauded tens of thousands of investors by capitalizing on the general public's excitement for virtual currencies and by luring unsuspecting investors into purchasing unregistered securities and participating in pyramid/Ponzi schemes."

Korean Banks Held \$1.79 Billion in Crypto During the 2017 Bull Run

<https://cryptoslate.com/korean-banks-held-1-79-billion-during-the-2017-bull-run/>

Yonhap, a mainstream media outlet in South Korea, reported that commercial banks in the country held nearly \$2 billion USD worth of cryptocurrencies during the 2017 bull run. Although the digital asset holdings of regulated financial institutions in South Korea only account for 8% of their total assets under brokerage, local publications reported the fact that digital assets, as an emerging asset class, already accounts for a portion of the holdings of commercial banks is significant. “The amount of crypto-asset investment is not really big, compared with other equity markets, and local financial institutions’ exposure to possible risks of digital assets is insignificant. Against this backdrop, we expect crypto-assets to have a limited impact on the South Korean financial market.”

Facebook's Blockchain Division Has a New Director of Engineering

<https://www.ccn.com/facebook-blockchain-division-has-a-new-director-of-engineering/>

Social media giant Facebook has recently promoted senior engineer Evan Cheng to director of engineering for its recently-launched blockchain division. Earlier in May, Facebook put together a team led by David Marcus, Coinbase board member and former president at PayPal, to explore blockchain technology and its potential use cases for the platform. The team consisted of less than a few dozen people and included senior executives from Instagram. The team was said to directly report to Mike Schroepfer, CTO of Facebook. In an executive reshuffle, Facebook appointed Evan Cheng as the director of engineering and Kevin Weil, formerly VP of product at Instagram, as the VP of product at their blockchain division. According to his LinkedIn page, Cheng has been employed at Facebook since November 2015 and has been working at their programming languages and runtimes division. He also worked at Apple for over 10 years and is credited as one of the inventors of LLVM, a compiler that generates the low-level machine code for Apple devices. Cheng is also listed as an advisor to blockchain projects Zilliqa and ChainLink.

Walmart Looks to Blockchain for Better Package Tracking

<https://www.coindesk.com/walmart-looks-to-blockchain-for-better-package-tracking/>

Walmart has yet another delivery-focused blockchain patent in the works. The application published on July 5 is entitled "Delivery Reservation Apparatus and Method," and as suggested, it outlines a way for managing package reservations in the context of the purchaser not being available to actually receive it. It's the latest "smart delivery" intellectual property play from the retail giant, which in the past year has submitted a number of U.S. patent applications in this area. Indeed, the company seems to be looking at the technology as a way to automate elements of the delivery process, but to date, much of the company's public-facing work with blockchain has been focused on food supply chain tracking. In the newly released filing, Walmart detail system of delivery lockers – located at a person's home, transportation hub or other location – that can safeguard the delivered items until their recipients can come and actually sign for them. Blockchain fits into the conceived picture as a method of connecting those lockers in order to track which ones are occupied and which ones are free to be used.

Platinum ICO Information

idap.io

The first crypto exchange introducing complete Derivatives Ecosystem for Crypto Assets

Crypto trading needs an update. The community needs more choices in trading instruments, better platform interface on exchanges and a user experience that satisfies all grades of traders: beginners, professionals and traditional trading veterans looking to switch over to cryptocurrencies.

To address these issues faced by traders, idap.io, a crypto exchange built by traders, is bringing to market the very first Crypto Derivatives Ecosystem. It is introducing for the very first time, crypto-based Calendar Spreads and Butterfly, low-risk derivative products amongst a wide variety of product offerings such as Futures, Perpetual Swaps, American Options, Indices, ETFs and several cryptocurrency pairs. Trade different cryptocurrencies and their complete set of derivatives on a single platform, which houses the most advanced Desktop Trading Interface and offers the first Simulated Trading Environment to practice crypto trading.

Project Details:

The idap.io exchange is an International Digital Asset Platform, offering traders a consolidated crypto marketplace where all their trading and investment needs are met. In addition to the diverse array of derivatives products mentioned above, P2P lending, OTC desk, ICO venture fund for retail investors and ICO incubation for blockchain entrepreneurs will also be offered.

IDAP Trader, the platform interface, is a 'point-and-click' ladder-based Desktop Application which supports multi-monitor setups and the creation, saving & loading of multiple workspaces, thus delivering a seamless and highly customisable trading experience.

IDAP Simulator is the Simulated Trading Environment that uses real-market data to enable crypto trading without staking any real tokens. It has been designed for encouraging beginners to practice crypto trading while enabling professional traders to develop and test trading strategies.

idap.io will issue its own token, the IDAP token (IDAP), which will be based on the Ethereum blockchain (ERC 20).

The team of highly motivated professionals behind idap.io possesses a robust academic background from world-class schools such as IIT, Stanford & LSE coupled with years of trading experience on world's best exchanges like CME and ICE.

Token Utility:

- **The circulating supply:** A total of 1 billion IDAP tokens will be generated, of which 75% (750 million) will be sold to the public in different rounds of sale. The actual circulating supply will be lower than the 750 million tokens sold, on the account of ICO contributors HODLing the tokens as they wait for the price to increase. Over time, the circulating cap may increase but this rise will still be quite limited.
- **Token burning:** 20% of all the IDAP tokens received as trading commissions and other platform fees will be removed from circulation and burnt at regular intervals till the total supply reaches 500 million. Lower the supply, greater the demand.
- **Utility for users:** A curated supply alone cannot help the demand for a token. At its core, the token should hold benefits for the user of the platform. With a 50% discount on all trading fees paid in IDAP tokens, users will flock to accumulate tokens and secure their discount.
- **Advantages for ICO investors:** Participants of the various rounds of the token sale will not only get discounts on their purchases but also benefit from added benefits. An ICO investor that holds 20,000 tokens or more will never have to pay any trading fees on the idap.io platform. ICO contributors buying 1.25 million tokens or more will get to use a Master Account for free. Given the deal to not just profit from value increase of tokens but to never pay any trading fees, a significant portion of the tokens of ICO investors will stay blocked, further maintaining the circulating supply.

Token Liquidity:

To further trade volumes and bring more depth to liquidity the team is innovating on two fronts:

- **Implied Orders:** They are introducing the vital functionality of implied orders so that their derivatives marketplace will not face the issues of scant liquidity and effective price levels will be enabled. Through their Matching Engine an interlink between the prices of futures outright, spreads and butterflies will be maintained. Implied logic is beneficial to participants trading these interlinked instruments since the interconnection allows them to access liquidity that would have otherwise been unavailable to them. Due to implied order functionality, a synthetic order is generated based on futures contract and spreads. For example, in the case of Bitcoin-based derivatives, its butterflies and calendars will be low-risk instruments, they will see larger bid and offer quantities and therefore greater liquidity and implied logic will tap into this liquidity for any Bitcoin futures contracts that have not been filled.
- **Partnerships with Proprietary Trading Firms:** In yet another first, they will provide a 'Master Account' for Proprietary Trading Firms so that they may generate the restricted sub-accounts (trade only) to the traders working within the firm. These sub-accounts will be limited in their capacity; traders will only be able to trade from these accounts but not make any withdrawals or deposits of funds. The entrance of Proprietary Trading Firms will greatly enhance the liquidity of their exchange and to this effect, they are fostering partnerships with many Proprietary Trading Firms eager to enter the crypto landscape. Moreover, entrepreneurs wanting to set up trading firms around cryptos will also be encouraged in their efforts by the introduction of the 'Master Account' functionality.
