Weekly Cryptocurrency Market Analysis

During the past week, the market was flat until we saw the selloff on Sunday. The overall market cap dropped by 13% to \$303 billion. Bitcoin is down 10% to \$6,800 while Ethereum's price decreased 11% to \$540. The total market capital for Bitcoin is \$115 billion and for altcoins is \$188 billion.

The drop followed news that Korean exchange Coinrail was hacked. However, Coinrail is a small exchange and we believe it should not have much drive to the overall market.

It seems like the analysts are getting worried about the lack of momentum, resulting in a downward revision in target prices.

We believe that the real reason of the drop is that some investors are losing patience. Bitcoin price had been mostly sideways for over 2 weeks with no upward momentum. Investor sentiments on Twitter are again mostly looking at a lower Bitcoin price in the near future.

Trading volume had been low, indicating that investors are taking a wait and see approach. Even positive news like the CFTC calling the virtual current movement a possible "modern miracle" went unnoticed. If this news came out during a bull market, we believe it would've received a much stronger market response.

Right now, we are being patient and aim to wait it out. Remember, when the sentiment feels extremely one sided, that's precisely when the market tends to move the other direction.

Probably, the game changer will be the entry of institutional investors. Various firms are laying their groundwork to benefit from the influx of big money. The latest to join the crypto trading bandwagon is the American global trading and technology firm Susquehanna International Group, which will open Bitcoin futures trading for a small group of its 500 clients.

So, is this the right time to buy? Let's see

Crypto Trade Opportunities

Bitcoin (BTC)

Entry @ \$6,500 - Exit @ \$7,300

Ethereum (ETH)

Entry @ \$475 - Exit @ \$600

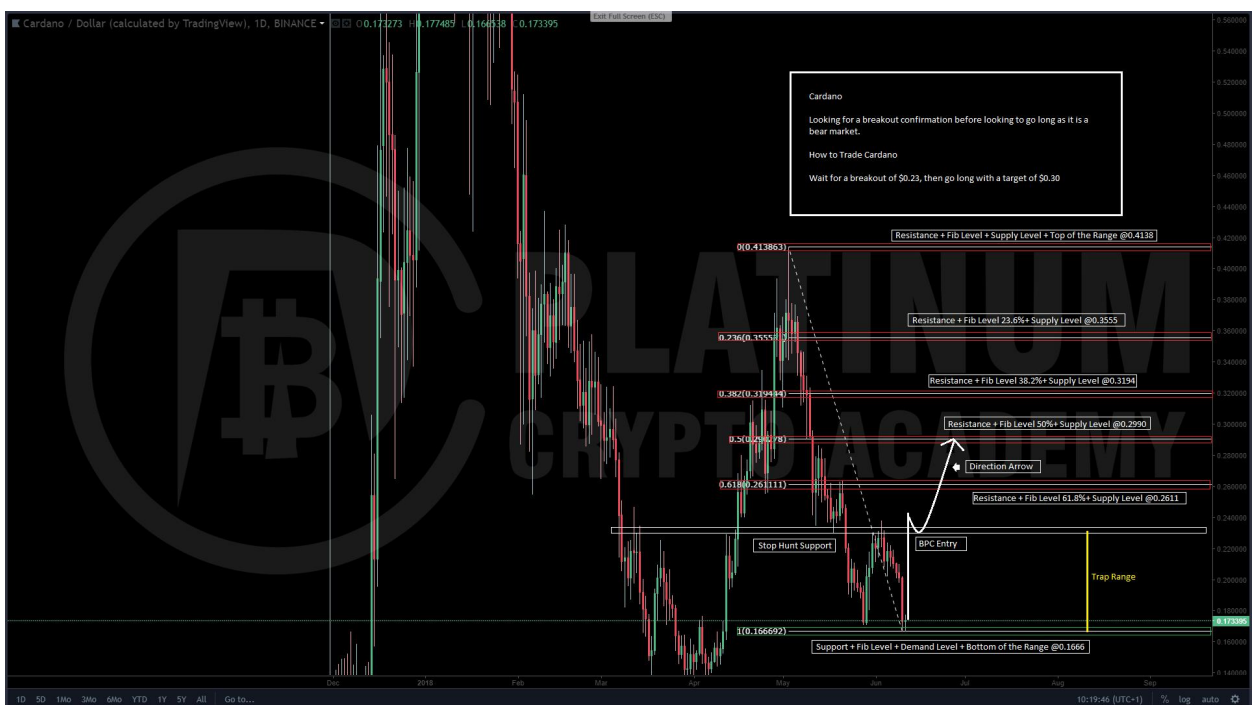

Bitcoin Cash (BCH)

Entry @ \$890 - Exit @ \$1,100

Cardano (ADA)

Wait for a Breakout of \$0.23 – Then Entry @ \$0.23 - Exit @ \$0.30

Ripple (XRP)

Wait for a Breakout of \$0.75 – Then Entry @ \$0.75 - Exit @ \$0.93

LISS (LISS)

Entry @ \$6.50 - Exit @ \$8.50

Advancements in the Cryptocurrency World

UK National Archives to Test Blockchain Tech for Official Record Keeping

<https://www.ccn.com/uk-national-archives-to-test-blockchain-tech-for-official-record-keeping/>

Digital archiving is challenging because computer files continuously change and become obsolete, the National Archives blog noted. A digital file from the late 1990s, for example, will require moving the content to a new file format in order to make it accessible in the future. One problem is that any file that can be changed could be changed with incorrect information, undermining the accuracy of the recorded information. ARCHANGEL, funded by The Engineering and Physical Sciences Research Council and supported by the University of Surrey, the UK Open Data Institute and The National Archives, uses blockchain technology to allow archives to register hashes of documents onto a permissioned blockchain. Changes to the blockchain would only be done by authorized parties.

EOS Mainnet Set to Launch

<https://www.coindesk.com/yes-votes-eos-blockchain-launch-imminently/>

The launch of the EOS blockchain has been a giant experiment in remote self-organization. Tonight, it took a big leap forward. As anticipated, candidates for the role of validators or "block producers" (EOS's equivalent of bitcoin miners) located all over the world voted "Go" to take the mainnet live. EOS is a distributed proof-of-stake blockchain created by Block.One, whose co-founder, Dan Larimer, has pioneered similar systems with BitShares and Steem. The company raised \$4 billion to develop the open source software over a year-long initial coin offering. No one really knew what would happen when the company turned its code over to the world, but with this vote it's coming clearer. As the software approached release, a group of organizations vying to serve as block producers found each other and formed the EOS Mainnet Launch Group (EMLG). They have so far managed to agree on a number of things, most importantly that they would launch one mainnet for EOS.

CFTC Commissioner Says We Are Witnessing a 'Revolution', Cryptocurrencies Are a 'Modern Miracle'

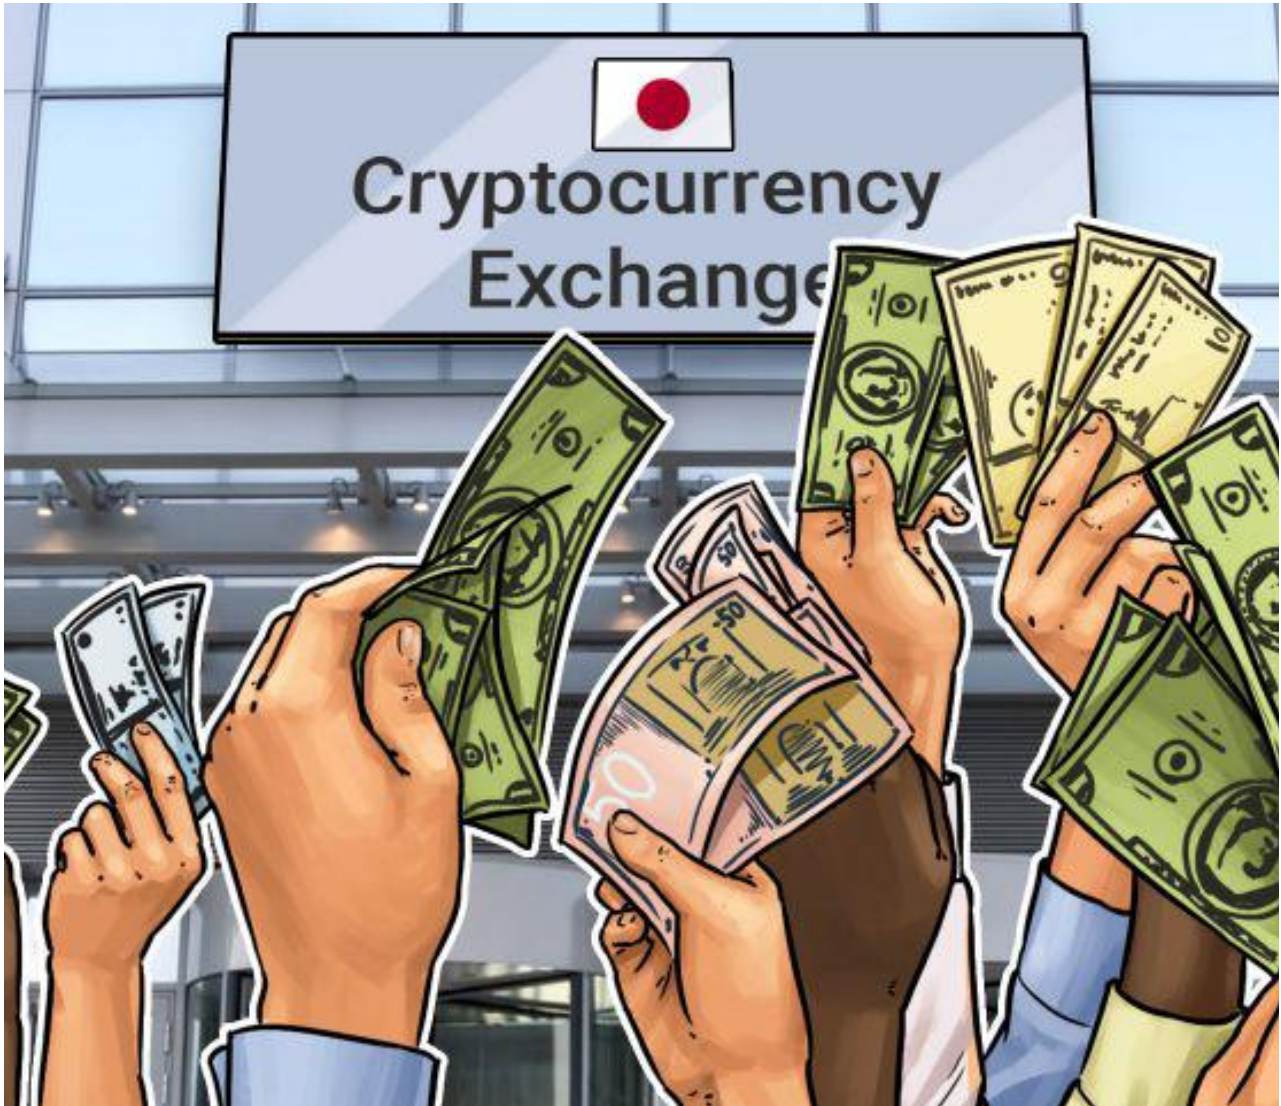

<https://cryptoslate.com/cftc-commissioner-says-we-are-witnessing-a-revolution-cryptocurrencies-are-a-modern-miracle/>

US Commodity Futures Trading Commission Commissioner Rostin Behnam labelled cryptocurrencies as a “modern miracle” at a recent summit, sharing a bullish stance on virtual currencies and predicting that blockchain technology will remake economic, social and political structures. Behnam discussed cryptocurrencies at the June 4 BFI Summit “Fostering Open, Transparent, Competitive, And Financially Sound Markets,” emphasizing the importance of leveraging the potential benefits of blockchain technology in order to “transform the world into something wonderful.” The CFTC Commissioner referenced the recent partnership launch between Blockchain, the United Nations Development Programme, the UN Refugee Agency, and the World Economic Forum. The United Nations Development Programme recently published a white paper titled “The Future is Decentralized” in order to provide policymakers and regulators with a deeper understanding of blockchain technology.

Japan's Financial Services Giant SBI Launches Crypto Exchange

<https://cointelegraph.com/news/japans-financial-services-giant-sbi-launches-crypto-exchange>

Japan's financial services giant SBI Holdings has announced that its in-house crypto exchange has now gone live, Cointelegraph Japan reports Monday, June 4. Called 'VCTRADER,' the service is now open for the ~20,000 users who pre-registered with the platform in October 2017, with plans to open ordinary account applications in July 2018. Ripple (XRP) is currently the only supported digital currency, though SBI states it will soon support Bitcoin (BTC) and Bitcoin Cash (BCH) as well. As Cointelegraph Japan reported, the new trading platform will adopt NASDAQ's transaction system (matching system). Transaction fees will reportedly be zero, although withdrawals will be subject to charges. SBI has also said it will cooperate with SECOM Group on preparing a crypto wallet management security system. As SBI's press release emphasizes, the launch of its exchange has been in process for "some time." The conglomerate first revealed its plans to launch a virtual currency subsidiary in October 2016. In December, 2017, SBI announced it would partner on the project with major crypto exchange Huobi, and anticipated launching the platform in early 2018.

Korean Exchange Coinrail Gets Hacked for Coins Worth \$50 million

<https://ethereumworldnews.com/cryptos-dump-as-korean-exchange-coinrail-gets-hacked/>

A few hours ago crypto markets plunged losing over 14 billion dollars in just a few hours. At the same time news emerged that South Korean crypto exchange Coinrail had suffered an incursion resulting in the theft of various altcoins. Coinrail is not one of the major exchanges; in fact it is relatively obscure ranked way down at 90th in terms of trade volume according to coinmarketcap.com. The exchange handles just under \$2.7 million in volume per day. The majority of that is used to trade an equally obscure coin called Pundi X. The mission of Pundi X claims to “make buying cryptocurrency as easy as buying bottled water. As the Walmart and 7-Eleven of cryptocurrency, we want users to buy and use cryptocurrency anytime anywhere.” Coinrail followed up with a post stating (translation); “At 15:00 investigation, the other exchange, coin developers are working hard to recover the total amount of the leaked coins such as Ferndix, Enfer, and Aston in cooperation with two-thirds of the amount collected or recovered, as well as the cooperation of the investigation and related institutions for the remaining coins.”

CFTC Subpoenas Leading Exchanges for Trading Data

<https://news.bitcoin.com/cftc-subpoenas-leading-exchanges-for-trading-data/>

According to anonymous sources cited by The Wall Street Journal, The United States Commodity Futures Trading Commission (CFTC) is coordinating with the U.S. Justice Department in conducting investigations into price manipulation in the spot BTC markets. The report claims that the CFTC launched a criminal probe into BTC price manipulation after several cryptocurrency exchanges rejected a request from Chicago Mercantile Exchange (CME) for the exchanges to share trading data CME. Last month, it was reported that the U.S Justice Department had launched a criminal probe into whether the bitcoin and cryptocurrency markets the subject of manipulation and misconduct, citing "four people familiar with the matter." According to a report recently published by The Wall Street Journal, again citing "people familiar with the matter," the CFTC has "open[ed]" an investigation into whether traders have colluded to manipulate bitcoin prices.

Bitcoin ETF Coming Soon: Crypto Fund Manager

<https://www.ccn.com/bitcoin-etf-coming-soon-crypto-fund-manager/>

John Hyland, the global head of exchange-traded products for Bitwise Asset Management, told ETF.com he believes the Securities and Exchange Commission could soon approve a cryptocurrency ETF. Hyland, who played a key role in developing the first commodity and oil ETFs in his role as CIO at United States Commodity Funds, hopes to introduce some of the first crypto ETFs. Last year, Bitwise opened a private cryptocurrency fund. Hyland thinks the SEC's concerns about a crypto ETF have largely been addressed. Bitwise has kept its private fund's crypto assets in a regulated custodian, a service the five large ETF custodial companies are considering offering. An ETF does not hold the coins, he said, but swaps or futures on the coins. An ETF holding swaps or futures could be custodied by an ETF custodian that manages futures based currency or commodity ETFs.

Binance Sets Up Bank Account in Malta

<https://cointelegraph.com/news/exclusive-world-s-top-crypto-exchange-binance-sets-up-bank-account-in-malta>

Changpeng Zhao, the CEO and founder of Binance, revealed the company has set up a bank account in Malta, in an exclusive interview with Cointelegraph Wednesday, June 6th. Binance is currently the world's largest crypto exchange with \$1.47 bln in trade volume, according to Coinmarketcap data. The move brings the exchange one step closer to its plans to offer fiat-to-crypto deposits and withdrawals on its platform, a feature that would further improve the exchange's liquidity and facilitate new investors entering the space with fiat purchases. Zhao, better known as CZ, described the new bank account as a "very significant" development since the exchange first revealed it was relocating its headquarters to the island. Malta is fast establishing itself as a haven for blockchain companies, given its robust and transparent crypto regulatory climate. CZ told Cointelegraph he hoped fiat-crypto trading on Binance would launch in Malta "within the year," also indicating plans to offer the service in Uganda and potentially Asia as well.

Coinbase is Acquiring a Securities Dealer

<https://techcrunch.com/2018/06/06/coinbase-is-acquiring-a-securities-dealer-in-order-to-trade-your-startup-tokens/>

Every day, tech investors and reporters are pitched on new services that intend to generate digital tokens that its creators expect will trade . . . somewhere. Perhaps unsurprisingly, Coinbase, known currently for trading a handful of the largest cryptocurrencies, wants to be that somewhere. To that end, it's acquiring securities dealer Keystone Capital, a California-based FINRA-registered broker-dealer that, according to the WSJ, can operate as a registered investment and run an alternative trading system. Coinbase said the move sets it on a path to "offer future services that include crypto securities trading, margin and over-the-counter trading." Terms of the deal weren't disclosed. Coinbase will need regulatory approval to operate under the Keystone licenses, and its COO Asiff Hirji told the WSJ that it expects to take several months after those approvals are obtained to integrate Keystone's operations. More than \$13 billion has been raised by startups via so-called initial coin offerings since the beginning of last year — a whopping \$6.3 billion of that raised in just the first three months of 2018. That represents a huge opportunity for a company like Coinbase, particularly as more startups submit to regulatory oversight and, as a result, produce what are called "security" tokens. (Startups also sometimes sell "utility" tokens, which are designed to represent future access to a company's product or service rather than as an investment, though the SEC has repeatedly signaled it's belief that these tokens are similarly expected by purchasers to rise in value.)

Chinese Cryptomining Chip Giant Bitmain Is Considering an IPO

<https://bitcoinmagazine.com/articles/chinese-cryptomining-chip-giant-bitmain-considering-ipo/>

Bitmain — the largest and most established manufacturer of cryptocurrency mining chips — is considering an IPO, or initial public offering. This could potentially open the company's books to the world and allow the stock market to assign the company real-time value. Bitmain's 32-year-old founder Jihan Wu says he's chiefly examining the possibilities of a listing in Hong Kong or "an overseas market with U.S. dollar-denominated shares." This, he says, would give early investors the chance to cash out. "Bitmain is trying very hard to maintain its advantage," he explained, commenting that the company has dominated the mining scene since it first came to fruition. Wu says a public share sale would be a "landmark" for both the company and the cryptocurrency space in general. He comments that miners, venture capitalists and developers alike are trying desperately to appease global regulators and are thus opting for less privacy and more transparency to prove digital assets are not fraudulent but rather legitimate forms of currency. He continued to say that an IPO would also help push Bitmain's profile, as the company is eagerly looking for ways to branch out into alternate arenas of technology including artificial intelligence which, unlike cryptocurrencies, has garnered solid support from Chinese officials.

Fidelity Investments Opening Cryptocurrency Exchange

<https://cryptodisrupt.com/fidelity-investment-opening-cryptocurrency-exchange/>

Fidelity Investment Corporation has recently posted advertisements looking for software developers to open a cryptocurrency exchange. Details have yet to be released about the launch date and how the exchange will operate. Fidelity is a leader in world investment, with over \$2.5 trillion dollars of assets under management. Fidelity will compete with the likes of Coinbase, Kraken, Binance, and OKex. However, given the vast amounts of wealth under management, its entry represents a complete shift in the industry. It is a colossal financial services firm, and it is the first western wealth firm to create a cryptocurrency exchange. In Japan, SBI Holdings recently launched their cryptocurrency exchange, and they are also heavily invested in high-volume Japanese exchange, Bitflyer. The news comes amidst a flurry of positive regulatory announcements concerning the cryptocurrency industry. Jay Clayton has stated that Bitcoin and other cryptocurrencies are not securities, a new cryptocurrency friendly head has been appointed by the SEC, a CFTC official has referred to blockchain as a “technological revolution,” and Coinbase is set to acquire licenses to trade SEC regulated cryptocurrency products. While Coinbase has launched a suite of institutional products, existing wealth conglomerates, such as Fidelity, can turn their clients and portfolios towards the sector more easily.

Platinum ICO Information

Etheal

Bringing Transparency to \$100bn+ Medical Tourism

Stanford educated Kung Fu world champion, Viktor Tabori (co-founder of Etheal) had a motorcycle accident in Thailand and decided to make healthcare more transparent. Now he is on a good path with his global team and you can join the movement! Blockchain-based incentivized global list of health professionals and content platform, helping patients save \$7,000-\$50,000 on elective care costs: patients will be able to search for and book specialists from around the world, indexed by their areas of focus and treatment methods, and peer-reviewed in their native language.

Project Details:

They are pursuing the opportunity to become the "Booking.com, Steemit and Salesforce of Healthcare", with a model capable of generating \$100B+ of potential revenue.

They intensely focus on UX and hiding the complexity of crypto world, creating a gateway for a vast number of users and money to join the biggest revolution since widespread internet adoption.

They have already tested their strategy, 2,500,000 people use their site yearly (Doklist.com), and they currently potentially reach 230M people on 2 opposing sides of the world (Brazil and Hungary).

Taking advantage of the blockchain-based incentive system and the resulting high-quality global database, they aim to quickly become a dominant player in rapidly growing markets (medical tourism and pharmaceutical communication research and advertisement), currently worth more than \$117 billion globally."
