# EDITORS

*Glassnode, in their March 7 newsletter, concluded that short-term holders seem to be selling their coins while the “long-term holder sell-side has continued to decline since Jan 2021, a signal of growing conviction in the face of high macro uncertainty.”*

*Nigel Green, CEO of deVere Group, also voiced a bullish projection when he said that Bitcoin could reach \$50,000 by the end of March.*

*Anthony Scaramucci, founder and managing partner of global alternative investment firm SkyBridge Capital, in an interview with Magnifi Media, said that Bitcoin was not an inflation hedge but an “early technological adoption story that is mirroring a lot of what happened in Web 1.” He projected Bitcoin to touch \$100,000 within two years.*

# LETTER

We had mentioned in our previous analysis that the bears will defend the zone between £32,382 and £34,032 aggressively and that is what happened. Bitcoin turned down from £33,987.99 on March 2 and broke below the moving averages on March 4.

Both moving averages have flattened out and the relative strength index (RSI) is near the midpoint, indicating a range-bound action in the near term. The BTC/GBP pair is likely to remain stuck between £24,450 on the downside and £34,032 on the upside.

If the price rises and sustains above the moving averages, the bulls will try to push the pair toward the resistance of the range. Alternatively, if the price breaks below £27,724.38, the bears will try to pull the pair toward the support of the range.

A break above or below the range is likely to begin the next trending move. Until then, the price action inside the range is likely to remain volatile.

Lastly please check out the advancement’s happening in the cryptocurrency world.

Enjoy the issue!

# WEEKLY CRYPTOCURRENCY MARKET ANALYSIS

Hello, welcome to this week's 224th edition of Cryptonaire Weekly Magazine. The global crypto market cap is \$1.72 Trillion, down \$190 billion since the last week. The total crypto market trading volume over the last 24 hours has increased by 24.29% to \$85.09 Billion. The DeFi volume is \$12.71 Billion, 14.93% of the entire crypto market's 24-hour trading volume. The volume of all stable coins is \$71.95 Billion, 84.56% of the total crypto market's 24-hour trading volume.

Bitcoin's price has decreased 10.87% from \$43,250 last week to around \$38,550 and Ether's price has decreased 12.82% from \$2,925 last week to \$2,550. Bitcoin's market cap is \$731 Billion and the altcoin market cap is \$989 Billion.

The Russia-Ukraine war has seen investors dump risky assets and load up on gold, which hit the \$2,000 mark on March 7. During the current crisis, Bitcoin has been moving in close correlation to US stocks, indicating that it is not behaving as digital gold but as a risky asset.

Glassnode, in their March 7 newsletter, concluded that short-term holders seem to be selling their coins while the "long-term holder sell-side has continued to decline since Jan 2021, a signal of growing conviction in the face of high macro uncertainty."

Another sign that investors may be using the current weakness to accumulate coins can be seen from the sharp inflows of \$127 million in the week ending March 6, according to CoinShares Digital Asset Fund Flows Weekly. Bitcoin witnessed its largest inflow since December 2021 at \$95 million and has "now seen 7 consecutive weeks of inflows."

Even institutional investors seem to be accumulating at lower levels. Glassnode data shows that Grayscale Bitcoin Trust (GBTC) shares witnessed an inflow of \$140 million in the week ending February 25. Additionally, investors with large holdings such as Cathie Wood's ARK Next Generation ETF (ARKW)

and the Morgan Stanley Insight Fund (CPODX) have not dumped their holdings though the positions are at a loss at current prices. This indicates that these investors may be positive in the long term. Nigel Green, CEO of deVere Group, also voiced a bullish projection when he said that Bitcoin could reach \$50,000 by the end of March.

Anthony Scaramucci, founder and managing partner of global alternative investment firm SkyBridge Capital, in an interview with Magnifi Media, said that Bitcoin was not an inflation hedge but an "early technological adoption story that is mirroring a lot of what happened in Web 1." He projected Bitcoin to touch \$100,000 within two years.

## Percentage of Total Market Capitalization (Dominance)

# CRYPTO TRADE OPPORTUNITIES

## BITCOIN - BTC/GBP

We had mentioned in our previous analysis that the bears will defend the zone between £32,382 and £34,032 aggressively and that is what happened. Bitcoin turned down from £33,987.99 on March 2 and broke below the moving averages on March 4.

Both moving averages have flattened out and the relative strength index (RSI) is near the midpoint, indicating a range-bound action in the near term. The BTC/GBP pair is likely to remain stuck between £24,450 on the downside and £34,032 on the upside.

If the price rises and sustains above the moving averages, the bulls will try to push the pair toward the resistance of the range. Alternatively, if the price breaks below £27,724.38, the bears will try to pull the pair toward the support of the range.

A break above or below the range is likely to begin the next trending move. Until then, the price action inside the range is likely to remain volatile.

[Previous Analysis...](#)

## ETHEREUM - ETH/GBP

Our assumption that bears may mount a strong defence near the resistance line of the symmetrical triangle proved to be correct as Ether turned down from just below the level on March 2.

The moving averages have started to turn down once again and the RSI has dipped into the negative

territory, indicating that bears have the upper hand. The ETH/GBP pair could now drop to the support line of the triangle.

This level is likely to attract buying from the bulls. If the price rebounds strongly off this level, the bulls will try to push the pair above the moving averages. If that happens, the pair may reach the resistance line.

However, a weak bounce off the support line could increase the possibility of a break below the triangle. If the price sustains below the triangle, the pair could resume its downtrend and slide toward the next strong support of £1,200.

The bulls will have to push and sustain the price above the triangle to indicate that the downtrend could be over.

[Previous Analysis...](#)

## RIPPLE - XRP/GBP

The bulls made several attempts to break and sustain the price above the downtrend line but the bears did not relent. Hence, our buy suggested in the previous analysis did not trigger.

A minor positive is that the bulls are accumulating on

dips to the 50-day SMA. Both moving averages have flattened out and the RSI is near the midpoint. This suggests a balance between supply and demand.

The bulls will again try to push and sustain the price above the downtrend line. If they succeed, the XRP/GBP pair could rise to £0.60 and then attempt a rally to the overhead resistance at £0.67.

Short-term traders may attempt to ride this move higher after the price decisively closes above the downtrend line.

This short-term bullish view will invalidate if the price turns down and breaks below £0.50. That could open the doors for a possible retest of the support at £0.46.

[Previous Analysis...](#)

## CARDANO - ADA/GBP

Cardano continues to be in a downtrend. The price rose above the 20-day EMA on March 1 but this proved to be a bear trap. The ADA/GBP pair turned down and dropped to £0.59 on March 7.

Both moving averages are sloping down and the RSI remains in the negative territory, indicating advantage to bears. If sellers sustain the price below £0.59, the pair could drop to the strong support zone of £0.55 to £0.50.

The bulls are likely to defend this zone with all their might because a break below the psychological level at £0.50 could accelerate selling.

On the upside, the first sign of strength will be a break and close above the 50-day SMA. Such a move will suggest that the selling pressure could be reducing. That may offer a buying opportunity to investors with a possible target objective at the resistance line of the channel.

[Previous Analysis...](#)

## BINANCE - BNB/GBP

Binance Coin broke and closed above the 50-day simple moving average (SMA) on March 1 but the bulls could not sustain the higher levels. The bears pulled the price back below the moving averages on March 4 and the BNB/GBP pair has been trading close to the 20-day exponential moving average (EMA) since then.

The flattish 20-day EMA and the RSI near the midpoint suggest a range-bound action in the near term. If bulls drive the price above the 50-day SMA, the pair could rise to the overhead resistance at £329.

Alternatively, if the price turns down from the current level and breaks below £275, the bears will try to pull the pair to the strong support at £247. This level could attract strong buying from the bulls as they have successfully held it on two previous occasions.

The next trending move is likely to begin on a break above £329 or on a close below £247. Until then, traders may consider buying on a rebound off the support and selling near the resistance.

**PRESS RELEASE**

# ARTEX, GLOBALIZATION OF ART

Artex was invented to revolutionize the way people invest in real art and to give everyday people a chance to be a part of it. Artex has its own token running on the Binance blockchain and developed its own art exchanging platform that you can visit here.

## What does Artex offer you?

Artex lists real artworks on their platform that are going to be tokenized on the blockchain. Therefore, users will be given the chance to buy parts of a valuable artwork that is usually sold in one piece for a much higher price.

Artex is already the number one real art trading platform in the cryptoverse. They have already launched their first listing "Decision of Heart" (DOH) from Mustafa Mutlu a well known award winning turkish artist and they are excited to add more listings from famous artists as well as unique NFT's that users can only find and purchase on their platform.

To be a part of their ecosystem and to have a chance to invest in one of their artworks, users must first purchase their native token \$Artex on either Pancakeswap, ProBit or Bitmart. After purchasing some \$Artex tokens you must register on their platform and send your artex on it. Then you simply choose one of the artworks you desire, make an order and wait for it to be filled or you can buy instantly as well to complete the process.

## Artex's Future Plans

They are excited to let you experience their or soon

to be your artworks from a whole new perspective with the integration of their Metaverse art gallery museum. It will be finished within the next few months and will let you experience your art in a fully 3D world. In addition they will add unique NFT's to their platform that are derived from real artworks which they launched on their platform. Those you can only purchase via an auction and will only be sold completely so those are yours and only yours. You will be able to trade them normally like every other NFT on opensea or other marketplaces. Of course, new listings are on the way as well and they will keep improving their platform after launching their metaverse gallery to keep it competitive in the scene.

Artex is a "phenomenal investment opportunity with its tokenized real art system" as their CEO Orlando Gere likes to say- quote from him: "Looking back, investing in art would have been a phenomenal strategy especially over the last decade. If you combine that potential with crypto you find yourself in a once in a lifetime opportunity."

Artex is eager to partner up with famous artists and galleries around the globe and it is just a matter of time when everyone knows about Artex.

# ASIMI: REVOLUTIONARY ADS MINTING PLATFORM

The Asimi token economy stands to benefit millions of people worldwide who wish to expand their online businesses. And its goal is to make mining the most simple and rewarding experience for users.

Asimi provides free access to the world of cryptocurrency, making it accessible to thousands of users worldwide. With value-based utility tokens, it can be a real asset within online advertising. Since its launch, Asimi has been sold, used for purchases, earned as affiliate commissions, and served over 1 billion advertisements.

ASIMI is expanding very rapidly in terms of project development and bringing in new functionality to the token utility. ASIMI is constantly engaging with like minded people who are the real industry leaders in marketing, promotion, partnership, development, compliance etc.

New project development roadmap includes a brand new ASIMI mobile App to give a new outlook to the project dashboard, token earned, socialising with other fellow members, earning rewards and much more.

ASIMI is already listed on some major exchanges and currently being traded in P2PB2B and HitBTC. Stay tuned for latest updates on ASIMI.

Discussing the ASIMI Project, Editor in Chief at Cryptonaire Weekly Mr. Karnav Shah noted: "It's rare you come across a project that explores wider utilities of the blockchain technology and expands the horizons. We are truly excited to share the ASIMI project and explaining how it harnesses blockchain technology to offer a complete tokenized economy symbiotically helping advertisers and putting money in the hands of people that need it most. We are certain that we will have more about this promising venture in our subsequent publications."

## Welcome the Future of **Fine Arts**

### World's first and only blockchain based artpiece exchange platform

We believe in a world where not only the lucky and privileged few, but everyone can invest in first-class artworks. Blockchain is the safest way to achieve this.

**How it Works**

## WHY BUY ARTEXX TOKEN NOW?

The digital currency of the Artex ecosystem is Artex Token. Artex token will be used for the function of all privileged functions of the platform and for shopping transactions.

#### Low Total Supply

Artex has only 100m total supply. First year the circulating supply will be only 50m.

#### A Promising Future Project

Artex is, world's first and only blockchain based fine arts exchange platform. It is the future of art market and one and only in its field.

#### Low Market Cap

You will be an investor in a project with great potential very early. Artex provide a future of arts.

**ART EXCHANGE**

**BUY NOW**

## HOW IT WORKS

Artex ecosystem based on blockchain and we solved issues of current and future

**1. Artwork Listing Request**

**2. Artwork Valuation Commission**

**3. Tokenization of Artwork**

**4. Listing Artworks on Artex**

**5. Trading on Fine Arts Token**

## WHAT IS ARTEXX?

With the Artex's smart contracts, you can buy and sell the amount you want from the works listed in the market. during the pre-sale process. The Artex Art Market aims to:

PROVIDING LIQUIDITY TO THE STUCKED ART MARKET.

SUPPORTING ART AND ARTIST RIGHTS WITH A MAGNIFICENT TRANSPARENCY.

A DEMOCRATIC DISTRIBUTION OF FINANCE IN THE ART MARKET.

A CRYPTO EXCHANGE BASED ON A PHYSICAL AND VALUABLE COMMODITY.

**ARTEXX.APP**

## ADVANCEMENTS IN THE CRYPTOCURRENCY WORLD

### EUROPE CRYPTO REGULATIONS SET TO MOVE FORWARD—WITHOUT BITCOIN 'BAN'

The European Parliament's Economics Committee is scheduled to vote on MiCA on March 14.

In brief

MiCA was delayed to rework language about a potential "ban" on Bitcoin mining and proof-of-work blockchains.

It's moving forward again, said Economics Committee Chair Stefan Berger.

After European Union parliamentarians paused a comprehensive crypto regulation bill to rework unpopular language, it wasn't clear when it would land back on the docket.

Stefan Berger, the main force behind the Markets in Crypto-Assets Directive (MiCA), announced today that the bill is scheduled for a vote by the European Parliament's Economics Committee on March 14.

Berger, who is chair of the committee, had pulled MiCA from consideration for a February 28 vote so that he and others could rework language within the bill after opponents balked at a section calling for proof-of-work blockchains, such as Bitcoin, to meet "minimum environmental sustainability standards" in order to be minted, exchanged or used within the European Union.

The lawmaker suggested that it could be "misinterpreted & understood as a [proof-of-work] ban." Ultimately, the entire passage was deleted, though concerns remain in some corners about the environmental impact of Bitcoin, which purposely uses high amounts of electricity to secure the network.

What remains of the bill, originally proposed in September 2020, is still a hefty package of regulations covering stablecoins and crypto services.

## How Crypto Shamed The UN: Larger And Transparent Donations

Crypto donations have been pouring into Ukrainian efforts and have reached almost \$70 million. Official reports show how the country has already started to successfully use the financial aid. Meanwhile, the United Nations lags behind with only \$20 million in donations that fail to be as transparent as crypto.

### Unflustered UN?

On 24 February 2022, the United Nations' Central Emergency Response Fund (CERF) announced it would be allocating \$20 million "to scale up U.N. humanitarian operations in Ukraine following Russia's invasion", The Washington Post reported.

U.N. humanitarian chief Martin Griffiths said the \$20 million [...] will support emergency operations along the contact line in eastern Donetsk and Luhansk and in other areas of the country, and will "help with health care, shelter, food, and water and sanitation to the most vulnerable people affected by the conflict."

To say that it was an insufficient amount would be an understatement. Especially after the UN High Commissioner for Refugees, Filippo Grandi, said the following:

We are looking at what could become Europe's largest refugee crisis this century. While we have seen tremendous solidarity and hospitality from neighbouring countries in receiving refugees, including from local communities and private citizens, much more support will be needed to assist and protect new arrivals."

[Read more...](#)

## Biden Planning to Sign Executive Order on Crypto This Week

The White House has been working on coordinating the efforts of different federal agencies since last year.

President Joe Biden is set to sign an executive order this week summarizing the U.S. government's strategy for dealing with cryptocurrencies, according to reports from Bloomberg and Reuters, citing people familiar with Biden's plans.

The order would direct federal agencies to consider potential regulatory changes, in addition to the national security and economic implications of cryptocurrencies, according to Bloomberg.

The White House has been under pressure to play a more central role in setting policies for and regulating digital assets. That pressure has only increased with the sanctions imposed against Russia for its invasion of Ukraine, and concerns that companies and individuals could use cryptocurrencies to circumvent them.

The White House has been working on the order since last year, and in January, reports surfaced that the order was coming soon.

The order will require federal agencies to report later this year on their progress with respect to dealing with digital tokens, according to Bloomberg.

CoinDesk has reached out to the White House to confirm the report but had not received an answer by press time.

# bitcci, INTRODUCING THE BEST CRYPTO TOKEN FOR THE ADULT INDUSTRY!

When one thinks about the “adult industry”, the first thing that comes to mind is a world of glamour fuelled by the passion and commitment of sex workers. However, despite being an integral part of the industry, the workers are often overlooked and seldom receive the true worth of their job.

In fact, there are many incidents in which the bank accounts of popular porn stars or escorts are frozen or banned without any prior notice, which only reveals the struggles an individual has to face for earning their true potential from the industry. Fortunately, crypto token is bridging the gap between dedicated sex workers and effortless payment. As opposed to traditional credit cards or banks, the crypto tokens offer workers a much-needed sense of financial independence and security.

## Intro Sex Industry Crypto Token

The sex industry comprises a wide range of services, including escort services, creation of adult videos, selling sex subscriptions, performing live for people via webcam or fulfilling fetish desires. Even though the opportunities in the industry are endless, still, there are only a few workers who can establish a successful career out of the industry.

The reason is loud and clear: though there are many users who actively buy the products or

services associated with the sex industry, only a few get the best value. To resolve the economic woes of this highly-promising industry, cryptocurrency made its way. Crypto token have so much to offer, as traditional financial institutions often consider porn or sex services to be a sector with high risk, more workarround fees for processing payments, and a large number of disputed transactions than other common economic industries.

Moreover, with the introduction of sex industry crypto token, consumers will be able to take advantage of anonymity. This gives a sigh of relief for major users of the adult sector, such as prominent celebrities, media organisations, government officials or corporate personnel, who often have a fear that bank authorities might be aware that they are proactive users of adult services through their bank account transactions or statements from the credit card.

The anonymity of cryptocurrencies is due to their method of operation, i.e. decentralised transactions recorded using a pseudonym, making it impossible for almost any professional to track the porn activities of the consumer. Several leading subscription service providers and sex service-dedicated platforms reveal that the benefits of crypto tokens are such that companies will soon go 100% crypto in the near future.

Giving this concept of better perspective, bitcci, a modern, innovative and advanced platform for the adult industry, brings the bitcci cash token. Let's find out more about what the crypto cash token by bitcci exactly is.

### What is bitcci cash token?

Part of bitcci's payment program, the **bitcci cash token** (BCT), is a secure, advanced, compliant solution of payment aimed to revolutionise the worldwide sex industry.

The cash token is designed for tokenising each and every aspect of bitcci, including its parent company, AG Group, to bring the adult sector out of the global shadow economy. These tokens act as a form of smart contract that is:

- **Capped:** There is a specific limit on the maximum number of **bitcci cash token** that can be published by the company. At the moment, bitcci has set a limit of 100 billion bitcci cash tokens.
- **Pausable:** The smart contract can be paused, i.e. bitcci has the ability to manage and stop transactions whenever required. Thanks to this, in

an event of a hack or vulnerability, the attacker will not be able to liquidate funds, and this keeps the bitcci ecosystem protected.

- **Burnable:** The number of bitcci cash token that are not sold in the IEO are burned- reducing the total number of tokens, which will ultimately increase their value.
- **Blacklistable:** Any suspicious ETH detected on bitcci's network are blacklisted. Say, if certain transactions or anomalies appear to be linked to fraud, then bitcci can blacklist them.

The tokens of the company are written using the latest Solidity version 8.0 – the contract language of Ethereum. Hence, the code adheres to the profound blockchain language of the industry. bitcci has published its source code of the smart contract, which has been audited and verified by Solid Proof and Immune Bytes. Its idea of publishing the source code essentially came from bitcci's value-based mission of making the adult industry a better place for the workers, the consumers and the **crypto investors**.

### Where can you use bitcci cash token?

**WHERE CAN YOU USE bitcci CASH TOKEN?**

Every product or service that is part of the **'bitcci ecosystem'** accepts the bitcci cash token for seamless payment, including:

- 1 For entering into events or nightclubs that accept the bitcci currency and are a part of bitcci's modern system.
- 2 For subscribing to premium content, adult materials, live chat, video calls and more, brought to you by trained and competent professionals of the bitcci family.
- 3 For ad placements on bitcci's promotional mediums (meant for sex workers), who want to advertise their services to prospective clients.
- 4 For licensing, web traffic, cloud IT services, and other holistic components of the bitcci network.

bitcci®

PLATINUM CRYPTO ACADEMY

Every product or service that is part of the 'bitcci ecosystem' accepts the bitcci cash token for seamless payment, including:

- For entering into events or nightclubs that accept the bitcci currency and are a part of bitcci's modern system. Furthermore, the cash tokens are also used for paying restaurant and bar bills, and provide exclusive perks such as special access to premium nightclub services.
- For subscribing to premium content, adult materials, live chat, video calls and more, brought to you by trained and competent professionals of the bitcci family.
- For ad placements on bitcci's promotional mediums (meant for sex workers), who want to advertise their services to prospective clients. This is meant for business partners or club owners who want to grab the attention of their targeted consumers.
- For licensing, web traffic, cloud IT services, and other holistic components of the bitcci network.

bitcci is going strong with the goal of making over 1 million sex workers part of its network (website & mobile app), with the blockchain project being its major stakeholder in achieving this mission.

### **bitcci Cash Token Mechanism Explained**

The sex sector is a vital element of the economy. But, if the challenges of this sector are not handled effectively, then this can have a lethal impact on its long-term growth.

According to several studies conducted in US, the sex market is crowded by innumerable shortcomings. Improper method of pricing, i.e. a certain section of sex worker receive less than \$5 per sex act, while for a certain portion of workers, the price might increase to over \$1,000; the inability to find a suitable worker for a particular sex service such as video call/chatting, adult content or subscription materials, as a large portion of the workers are inexperienced; and compared to the rise in market size, the workers are not able to create a career out of the industry.

Taking the shortcomings into consideration, bitcci

implemented a simple and straightforward sex crypto token or the bitcci cash token, which provides participants optimal safety while giving proper standardisation, as:

- Users have the opportunity to either send or receive the cash tokens via bitcci pay. This resolves the issue of banned or blocked bank accounts, making payments more secure and seamless.
- Connected globally, the brand has partnerships with eminent blockchain organisations. Its pioneer nightclub management software is active at 5 reputable saunas of Switzerland, which means every transaction occurs through bitcci cash.
- Every sex worker, upon successful signup at bitcci's network, gets a global identification or bitcci ID, allowing them to provide a myriad of sex services around the world. The workers can use bitcci cash for marketing their services on the application, bitcci TV or website.
- There are no third-party companies supported by bitcci, so the tokens are completely liable to bitcci – the platform service provider.
- bitcci tokens being an electronic form of money is resolving the conflicts of the sex industry, as bitcci cash token is integrated, making it transparent, secure and safe.

Ideally, the mechanism of bitcci cash token decentralises, regulates and optimises the adult industry. It brings a sense of acceptance, freedom and trust for the sex workers.

### **How to buy bitcci cash token?**

bitcci cash tokens can be purchased by participating at the sales session of the company at its official website, or by registering at the exchange platforms that support IEO listings.

The brand has sold over 20 million tokens at its ICO, which is equivalent to 20% of the limit, which is now owned by investors. The cash token owners do have the chance of selling them before the end of ICO or any other partner exchange platform of bitcci, such as P2PPB2B, COINSBIT, IndoEX, Dex-Trade, BitForex, and as the company expands, it will be

added to more exchange platforms.

To buy bitcci cash token on its official website, the crypto investor has to do the following:

- Sign up at the official website using a valid email address and password; bitcci will make use of the credentials for sending important information related to the tokens.
- Select the amount of bitcci cash token that you want to buy. For example, if you are willing to buy 500,000 cash tokens valued at 0.002 USDT, then you will have to pay 1000 USDT for purchasing it. Similarly, the tokens can be bought using cash based on the amount of money that you want to spend. Instead of the tokens, select 1K USDT for 500K cash tokens.
- Next verify the phone number for getting information about the pricing, IEO listings, ICO listings, and other updates regarding the bitcci cash tokens. Accept the terms of service/conditions.
- Pay for the selected amount of bitcci cash token using over 50 supported cryptocurrencies such as Bitcoin, Ether, Ripple, Litecoin, Dogecoin, Zcash, bitcoinCash, Tron and more.
- The invoice is sent to the investor in PDF format, which can be used for validating the ETH address or MetaMask.
- On successful validation, the bitcci cash tokens are loaded into the bitcci wallet, and can be used for different services or products within the bitcci ecosystem.

bitcci has listed the cash tokens on ICO and IEO (Initial Exchange Offering). The IEO will go live on March 1st 2022 and is currently available at 10 popular exchange platforms. The platforms are reliable and adhere to strict industry standards, meaning the crypto investor will never have to be concerned about their critical information landing in the wrong hands.

The company has plans of sending almost 70 billion bitcci cash token to graveyard supply, as a result of which, 30 billion tokens will actively circulate in the

crypto industry. During the ICO offering of crypto tokens in 2021, bitcci was able to raise a massive funding of 6 million dollars to 4000 token holders from various parts of the world. The company's objective of reshaping the demanding and scalable sex market makes it a promising choice for crypto investors.

## Conclusion

From education, finance to sports, the use of blockchain has transformed almost every sector of the economy. The same stands true for the adult industry, where deployment of crypto token would significantly help in overcoming common challenges of the sector, while offering minimal operational costs to the users and consumers. Most importantly, introduction of the sex crypto token eliminates the scope of illegality and malpractices that often haunt this cash dominated industry.

bitcci takes a holistic approach, by not only giving a platform to the sex workers but also by training them via the bitcci Academy, which focuses on the worker's professional and private life. It covers complete training programs on self-marketing, managing clients, hygiene, sales psychology, nutrition, live communication, health insurance, work billing, taxes and quality management too. To overcome language barriers, the Academy supports training in over 20 different languages. The workers can avail the services of bitcci Academy by paying through bitcci cash tokens.

Even the bitcci nightclubs that are part of its network will get the best of equipment, access to trained sex workers, personnel planning, room planning, and online portals, so as to create a comfortable and hassle-free management for the nightclub owners, sex workers and the consumers. bitcci's plan of action can effectively liberate the sex workers from the usual industry-related problems by establishing a culture of trust, acceptance and transparency. The innovative technologies and proactive concept of business will bring standardisation and coordination into the sector. What's more, by investing in bitcci's cash tokens, you are able to leverage from a committed, strategic and result-driven ecosystem for the sex industry.

## FinCEN includes crypto in alert on Russia potentially evading sanctions

Prompt reporting of suspicious activity contributes to our national security and our efforts to support Ukraine and its people," said FinCEN acting director Him Das.

The United States Financial Crimes Enforcement Network, or FinCEN, a bureau of the Treasury Department, has warned financial institutions to consider crypto as a possible means Russia may attempt to use to evade sanctions related to the country's military action in Ukraine.

In a Monday alert, FinCEN reminded U.S.-based financial institutions "with visibility into cryptocurrency" and convertible virtual currency, or CVC, to report any activity that could be considered a potential way for Russia to evade sanctions

imposed by the U.S. and its allies. While the U.S. watchdog said that the Russian government using CVCs to evade large scale sanctions was "not necessarily practicable," financial institutions were obligated to report such activities from Russian and Belarusian individuals named in actions that many have dubbed "economic warfare."

"In the face of mounting economic pressure on Russia, it is vitally important for U.S. financial institutions to be vigilant about potential Russian sanctions evasion, including by both state actors and oligarchs," said Him Das, who has been the FinCEN acting director since August 2021.

## Papa John's Plans NFT Drop Despite Prior Warning From UK Advertising Regulator

The collection of 19,840 NFTs has been minted on Tezos and takes the form of nine different pizza hot bag designs.

Pizza take-out chain Papa John's (PZZA) is planning to give away nearly 20,000 non-fungible tokens (NFT) to customers in the U.K., shrugging off a previous warning from the country's advertising regulator about its dalliances in the crypto world.

The collection of 19,840

NFTs has been minted on Tezos and takes the form of nine different pizza delivery hot bag designs.

The NFTs will be dropped on several dates in early March. This is not Papa John's first foray into the world of crypto and blockchains. The take-out chain last year launched a promotion in which customers could win £10 (\$13) worth of bitcoin (BTC) when they spent more than £30 (\$39).

The campaign fell afoul of the UK's Advertising Standards Authority, who deemed it "irresponsible" as it "took advantage of consumers' inexperience or credulity and trivialized investment in cryptocurrency." The pizza chain subsequently removed the ads for the campaign.

Papa John's has a long-standing association with cryptocurrency owing to the infamous occurrence of an early bitcoin user spending 10,000 BTC on two Papa John's pizzas in 2010. The bitcoin, worth \$41 at the time, would be worth nearly \$400 million at today's prices.

# DEFI COMING TO SOLANA WITH HUBBLE PROTOCOL

Solana came into the picture back in March 2020. Since then, it has skyrocketed both in usage and in price. Despite the network outages that many incorrectly assumed to be the death of Solana, the network has continued to soar higher and stronger. Solana's native token (SOL) has risen significantly since January 2021, signalling a huge interest in the Solana network by the market.

As of September 2021, the total value locked in Solana DeFi protocols amounted to \$12 billion. While this is nowhere near the humongous \$120 billion locked in Ethereum, it is a start and good progress in the right direction. One of the most recent developments in the network is the Hubble Protocol. This project will help bring DeFi to Solana in a massive way. Solana came into the picture back in March 2020. Since then, it has skyrocketed both in usage and in price. Despite the network outages that many incorrectly assumed to be the death of Solana, the network has continued to soar higher and stronger. Solana's native token (SOL) has risen significantly since January 2021, signalling a huge interest in the Solana network by the market.

As of September 2021, the total value locked in Solana DeFi protocols amounted to \$12 billion. While this is nowhere near the humongous \$120

billion locked in Ethereum, it is a start and good progress in the right direction. One of the most recent developments in the network is the Hubble Protocol. This project will help bring DeFi to Solana in a massive way.

## What is the Hubble Protocol?

Hubble is a decentralised finance protocol on the Solana blockchain. Users can use their assets as collateral in taking loans. These loans are made in USDH, a censorship-resistant and crypto-backed stablecoin built for the Solana DeFi ecosystem. If you look at the trajectory of success for MakerDAO's crypto-backed DAI, a stablecoin with similarities to USDH but built on Ethereum, the room for USDH's growth is enormous as Solana DeFi matures.

In fact, a strength of USDH is that the Hubble team has taken into account the history of DeFi when developing a stablecoin. USDH takes a lot of inspiration from two stablecoins, DAI and LUSD, that are responsible for nearly \$20 billion in total value locked (TVL) on Ethereum. Hubble has taken these proven designs and improved them to bring a decentralized, collateralized, and strong stablecoin to Solana.

One of the most interesting aspects of the Hubble

Protocol is that users can take out loans using several varieties of assets as their collateral. This multi-asset collateral helps to reduce the risk of liquidations. For example, if you have 2 BTC 100 SOL and 3 ETH, suppose you need some liquidity to purchase a different token, or NFT; with Hubble, instead of selling any of your tokens, you can deposit them as collateral and use the loan, which is interest-free, to invest in several different assets that you are eyeing.

As of today, Hubble is supporting SOL, BTC, ETH, RAY, SRM and FTT as some of the first tokens to be used as collateral. You will be able to take out a USDH loan, depending on the value of your assets at the time of taking the loan. The maximum loan you can get is up to 90.9% loan-to-value (LTV). This means that if the value of the collateral drops due to market fluctuations, your LTV might rise above the set percentage, and if this happens, you will get liquidated. You shall lose your collateral but then you will not have to pay back your debts anymore.

### Key Features of the Platform

Hubble Protocol has several key features that make it one of the best DeFi platforms on Solana.

#### Multi-asset Collateral

Because of this feature, users can deposit a wide range of tokens to be used as collateral against their loans. As of today, Hubble only accepts Solana (SOL), FTT, Ethereum (ETH), Bitcoin (BTC), RAY and Serum, or any combination of those assets. It is expected that in the future, Hubble will add to this list so that many more users can use the protocol to borrow assets for DeFi use.

#### Zero Interest Borrowing

In the Hubble Protocol, users can borrow USDH at zero interest fee. This means that if you borrow

10,000 USDH, you return 10,000 USDH without any interest. However, there is another key feature that the Hubble Protocol has put in place to complement the zero interest in borrowing. There is a one-time fee of 0.5% of the borrowed amount – charged when borrowing.

#### 90.9% Loan-to-Value Ratio (LTV)

With this feature, if the value of your collateral drops due to the normal market fluctuations, your collateral will be liquidated. This means that if you put up 2 ETH as collateral, then if the value of Ethereum drops, the LTV goes up above 90.9%. The higher the loan-to-value percentage rises, the larger the liquidation of your collateral. If your entire collateral is liquidated due to market fluctuations, you will not have to pay the loan because it will

have been paid by your collateral. This ensures you that users don't have to be loaned twice while the market is bearish.

### **Generating Yield on Deposits**

When users deposit assets on the Hubble Protocol, they are providing those assets for other users to come and borrow (borrowers). Therefore, all users who deposit on the Hubble Protocol get a set annual percentage yield (APY) in proportion to their assets. Also, the Hubble Protocol has their own native token. The name of the token is Hubble (HBB) and holders of the token can participate in HBB staking to earn rewards. This makes the Hubble Protocol a great place for passive income.

### **Leverage Potential**

On Hubble, users can borrow to leverage their positions on their long-term assets. For example, a user can deposit \$100 in ETH or any other crypto of their choice and take a loan against that collateral. They can then use the loan to buy more ETH and afterwards, deposit it again on the protocol. Repeating this process enough times allows a user to increase their collateral and exposure up to 11x. All this can be done without incurring additional costs. The entire process is only charged once during the minting process by Hubble Protocol and hence, there are no continuous borrowing fees.

Additionally, the collateral that you have deposited on the Hubble Protocol does not sit idle. The Hubble Protocol dev team has partnered with several DeFi protocols across the Solana network to put your deposited assets to work. This means your collateral can earn yield for you. In short, Hubble Protocol enables you to take self-paying loans at zero cost and zero interest.

### **Why use the Hubble Protocol?**

Hubble Protocol provides an easy way for DeFi users to get more from the Solana ecosystem. Currently, the Solana ecosystem is rapidly growing and there are many opportunities for users to explore other protocols. The lending aspect of the Hubble Protocol will help Solana users to make maximum use of the other protocols. Here are some of the benefits of using the Hubble Protocol if you are an avid user of the Solana blockchain:

- Hubble Protocol brings to the table an efficient way to take loans and repay them, because if a user is unable to repay the loan, the liquidation aspects of the 90.9% loan-to-value ratio allows the loan to repay itself.

- Additionally, the protocol makes it very easy to manage borrowing. Hence, a user can track their collateral ratio and also increase their collateral without incurring extra costs due to the continuous application fees. Withdrawal and deposits of collateral are fairly easy and efficient.

- Moreover, the Hubble Protocol allows users to stake their HBB tokens to earn rewards. When users add USDH to the stability pool, they are awarded HBB tokens. Additionally, staking the HBB earns the user nice rewards.

- Users can also redeem their USDH for other tokens of their choice when an arbitrage opportunity arises. When the USDH price falls below the 1:1 USD-peg ratio, then it can be redeemed on the Hubble Protocol for \$1 worth of another token. Hence, users can make money off of market fluctuations. This is revolutionary as it has not been used or applied in other DeFi protocols across the blockchain.

- Users who are not able to repay their loans can opt to trigger liquidations and still be rewarded with 0.5% of the value of liquidated assets. Therefore, not only does Hubble Protocol allow you to repay a loan with liquidation, it rewards you with a portion of your liquidated assets. For instance, if you would borrow \$10,000 of Bitcoin, you will be rewarded \$50 in Bitcoin.

### **USDH and HBB tokens**

The Hubble Protocol has two tokens working in the system; USDH and HBB.

#### **USDH Token**

The first token is the USDH. This is a stable coin, which means that it is pegged to the US dollar at a ratio of 1:1. The USDH can never stray too far from the \$1 peg of the United States dollar. USDH is minted every time a user deposits targets as collateral in the habit of recording with the intention of borrowing.

## HBB Token

This is the native token of the Hubble Protocol. It can be staked to earn the user rewards from the protocol. This utility is already inherent in the DeFi universe across multiple blockchains. There are many other projects where users deposit the native token to secure the network and earn rewards. Hubble Protocol aims to become a decentralised, autonomous organisation (DAO) in which the Hubble token (HBB) will be used for governance rights and voting.

## Sweet Deals on Solana with Hubble Protocol

On February 5 2022, Hubble Protocol struck a partnership with Saber. The partnership will enable users to join the USDH/USDC pool on the Saber platform. Saber is an automated market-maker platform that allows for trading of crypto assets on the Solana network. Saber boasts of low slippage, high liquidity and trade execution at lightning-fast speeds. The AMM has integrated several DeFi protocols across the Solana network. Users who provide liquidity through the Saber platform earn yield generated from the transaction fees and liquidity incentives.

### Enjoy almost 29% APY on Saber

As of February 5 2022, the Hubble Protocol had been live for just a week. However, it had already crossed over \$30 million in total value locked (TVL). The USDC/USDH pool in the Saber platform currently has over 210,000 USDH and over 1.7 million USDC. The pool is currently doing a volume of over \$400,000 in the last 24 hours, with a 3.09% APY. Users who are currently supplying liquidity to the USDC/USDH are enjoying a 3% annual percentage yield on their deposits.

### Enjoy Dual Rewards in MER and HBB on Mercurial Finance

Mercurial Finance is a platform that is building the liquidity platform for stable coins. This means that users can supply liquidity for supported stablecoins on Mercurial. Mercurial will in turn supply the liquidity to the appropriate DeFi protocol. In their latest partnership, Hubble partnered with Mercurial Finance on February 7 to launch the USDH-3Pool. This pool contains three stable assets; USDH, USDC

and USDT. Users who add USDH to this pool will be rewarded dually with MER (native token of the Mercurial Finance) and HBB tokens.

According to Saber, the total value (TVL) of this pool skyrocketed immediately after launch, around January 31 2022. The TVL hit an all-time high of \$5.7 million on February 8. Since then, the TVL has been stabilising and is currently sitting at \$3.6 million. The pool volume reached an all-time high of \$940,000 on February 7, then gradually went down and stabilised at around \$400,000 as of the time of writing.

## Conclusion

Hubble Protocol began as a project in the Solana hackathon. However, over time, the project has grown and is now supported by some of the top projects and investors in Solana. Some of these investors are large venture capital firms, managing billions of dollars in funds. They include the Jump Capital, Three Arrows Capital, the Spartan Group, Solana Ventures and Delphi Digital, among many others. Hubble Protocol boasts of zero cost possibilities, multi-collaterals, yield on deposits. These are just a few of the features that set Hubble Protocol apart from other DeFi lending and borrowing platforms. It is clear that in the future, this project will become a top tier blue chip project.

The team also aims to become a decentralised, autonomous organisation (DAO) so that the community can be more involved and use the power of the HBB token to lead the way for the Hubble Protocol. Additionally, users of the system can share fees and gain rewards on liquidations. These are just part of the reasons that have led to top investors investing in the Hubble Protocol. It is unique from other platforms. In the first funding round, Hubble Protocol managed to raise \$10 million, which enabled the project to go live. In just over one week, the protocol grew to over \$30 million in total value locked in. This is an indication that the project is delivering more than expected, which shows that the Hubble Protocol is massively an undervalued project.

# Supercharge Your Liquidity On Solana

Mint USDH stablecoin at 0% interest against multiple types of collateral

## About Hubble

Hubble is a fee-sharing decentralized finance (DeFi) protocol built on Solana that will offer multiple DeFi services as the protocol and DeFi continue to mature and expand. Hubble begins its DeFi journey in Phase 1 by offering zero-interest loans that can be collateralized by multiple assets including SOL, BTC, ETH, RAY, SRM, and FTT with other options for collateral deposits added as they are approved in the future.

[Learn more](#)

## Stake HBB and Earn Protocol Fees

HBB can be staked on Hubble to earn fees from the protocol. In the future, HBB will be used to vote on improvement proposals as Hubble DAO's governance token. Staking HBB earns users 85% of the revenue Hubble Protocol generates from its services. This revenue will originally come from the 0.5% fee for minting USDH and the 0.5% fee for redeeming USDH for collateral. As the protocol expands, HBB stakers will be exposed to additional streams of revenue.

[Learn more](#)

## USDH - Solana-native Stablecoin

USDH is 100% censorship resistant. It will be backed by only crypto assets such as BTC, SOL, ETC, etc. No fiat involved.

USDH is a crypto-backed, 100% decentralized, stablecoin native to solana. USDH is backed over 150% by a diverse basket of blue chip cryptos like BTC, ETH, and SOL, and USDH can be redeemed for these cryptos at a discount whenever USDH falls below its peg to USD. Conversely, USDH can be minted for a profit whenever it rises above peg, and these mechanisms help keep USDH tightly pegged 1:1 with USD.

Within Hubble Protocol, USDH has several use cases. First of all, USDH helps democratize liquidations. Users who deposit USDH into Hubble's Stability Pool can earn their fair share of liquidated assets from unhealthy borrows, and this adds up to receiving top crypto assets at a ~ 10% discount. Additionally, Stability Pool depositors earn HBB rewards for participating in the protocol.

### How to earn with USDH

By staking USDH, you'll be able to double-short the market. One by being in stablecoins and two by earning liquidation gains.

## Coinbase Blacklists Over 25,000 Crypto Addresses Tied to Russian Individuals and Entities

The cryptocurrency exchange Coinbase has addressed the company's procedures toward complying with sanctions in a blog post published on Sunday. The crypto firm says that respecting sanctions plays a "vital role in promoting national security" and the acts can help deter "unlawful aggression."

Coinbase Intends to Comply With International Sanctions, Chief Legal Officer Says 'Digital Assets Have Properties That Naturally Deter Sanctions Evasion' Following the statements of the two chief executives from two of the largest crypto exchanges on the planet, Coinbase has published a blog post concerning the company's goals toward promoting sanction compliance. The post was written by

Coinbase's chief legal officer Paul Grewal and it touched upon the current conflict in Ukraine. Essentially, the gist of the article highlights that "Coinbase is committed to complying with sanctions."

"In the past few weeks, governments around the world have imposed a range of sanctions on individuals and territories in response to Russia's invasion of Ukraine," Grewal's post details. "Sanctions play a vital role in promoting national security and deterring unlawful aggression, and Coinbase fully supports these efforts by government authorities. Sanctions are serious interventions, and governments are best placed to decide when, where, and how to apply them."

## Ripple Wants To End XRP Lawsuit by September of This Year: Attorney Jeremy Hogan

Ripple Labs wants to end its lawsuit with the U.S. Securities and Exchange Commission (SEC) by September or October of 2022, according to a closely followed crypto legal expert.

The SEC sued Ripple in December of 2020 on the allegation that XRP was sold as an

unregistered security. According to Jeremy Hogan, an attorney known for covering the lawsuit, Ripple is aiming for the case to reach a conclusion this year based on documents revealed to the public over the weekend.

"When will Ripple v. SEC case end? Ripple thinks it will end

sometime between Aug. 26 and Nov. 18. In its pending class action, Ripple agreed to move the case start back to Nov. 18 in belief that the SEC case will be finished before then.

Of course, it can settle ANYTIME."

Previously, Hogan had predicted that September would be the month that the lawsuit would conclude. He says that the recent documents, which show Ripple requesting

a rescheduling of the pending class action from August 26 to November 18 of this year, suggest such a scenario.

"It makes me feel more confident in my September summary judgment prediction.

I think Ripple thinks it wins the SEC case in Sept/Oct and then this class action goes away due to 'collateral estoppel.'

# Sign up for the maxxer pre-sale!

Don't miss out on securing \$MXXR tokens at this discount before public sale launches, **get a 25% discount now!**

- Discounted trading fees using \$MXXR
- Crypto based social trading platform
- Regulated and secure
- User-friendly

**Trade at a discount**

When you use the MXXR token to pay for trading commissions, you get a 50% discount. When actually making a trade, you can directly see how the fees and spread influences your trade.

**Charity donating**

At maxxer we are dedicated to helping make the world a better place, and as such 2% of all transaction fees will be donated in our \$MXXR charity pool.

Each quarter the charity pool will be distributed with people able to directly donate additional \$MXXR tokens in order to vote proportionally on where that money goes, receiving a receipt for their donation and maxxer rewards as an added bonus! All donations will be made in the name of the donors.

**Raffles**

1% of all transaction fees paid with the \$MXXR token will be put into a lottery fund with one \$MXXR token equaling one raffle ticket, giving users of the maxxer exchange even more reason to not just buy, but hold \$MXXR as well.

**Tipping content creators**

By creating your own space for social content we will let you support those that provide genuinely good and useful content by tipping them. This removes the need for influencers to turn to external sources of income and actually punishes them for it as people will only want to reward those who give out good advice.

[Go To Pre-Sale](#)

## what is maxxer?

maxxer is the first centralised and regulated digital asset exchange that focuses and rewards a communal and social trading system. We are making crypto investing and trading accessible and simple; guiding both new and experienced investors through the ever-changing cryptocurrency markets in your own maxxer community.

Social trading

Gamification

Watch, Read, Share

### Liquidity

maxxer will enhance liquidity by settling the exchange of members' assets within the internal exchange and effectively combining the aggregated liquidity across public exchanges. We will use 35% of the IEO proceeds to facilitate market making partners and our own marketmaker to deliver narrow spreads and a deep liquid order book at a fair price versus other global exchanges.

- Using market makers that are marketmaking over 50 exchanges globally.
- Using our own marketmaking and inter-exchange arbitrage bot.

### Security

We have developed a multilayered security system that is capable of both containing and neutralizing attack attempts in a timely manner with the need for as little human intervention as possible.

We also make use of state of the art solutions for multi signature and redundancy in every step of the way when it comes to cryptocurrency transfers, even in hot wallets which are directly connected to our system.

### Rapidly changing regulations

maxxer is compliant by design and intends to fully comply with all

regulatory aspects in all the regions it will operate.

maxxer engages with the best-in-class lawyers and consulting firms to ensure that we are fully compliant with the current regulations and a step ahead for the coming MICA (Markets in Crypto Assets) regulation.

## Ethereum NFT Gaming Startup Immutable Hits \$2.5B Valuation After \$200M Raise

The startup behind Immutable X, a scaling solution for Ethereum NFTs and games, is the latest crypto unicorn after a Series C raise.

### In brief

Temasek led the \$200 million round, with participation from Animoca Brands and Tencent.

Immutable X is an Ethereum scaling solution used by firms like GameStop and TikTok.

Immutable, the Australian startup behind an Ethereum layer-2 scaling solution designed for games and NFTs, announced today that it has raised a Series C funding round at a valuation of \$2.5 billion. The firm joins an ever-expanding list of crypto “unicorns,” or startups worth at least \$1 billion.

The \$200 million round was led by investment firm Temasek, with participation from Chinese gaming giant Tencent and leading metaverse investment firm Animoca Brands. Additional new investors include Arrington Capital, Mirae Asset, and Liberty Global, while Alameda Research and Possible Ventures are among the firms that increased their total investment.

Immutable is the firm behind Immutable X, a layer-2 platform that works on top of the Ethereum blockchain. Transactions on Immutable X are significantly cheaper and faster than those on Ethereum’s own mainnet, and require much less power than transactions on Ethereum’s own energy-intensive proof-of-work network.

## Chinese government increases focus on “metaverse,” eyes regulations

The Chinese authorities are becoming increasingly interested in the growth of the metaverse space within their country.

During China’s annual “Two Sessions,” the authorities discussed “metaverse” at a national level for the first time, with delegates calling for regulation to ensure data security and the eradication of speculation within the industry.

Since China successfully curbed the growth of crypto within its jurisdiction, the metaverse has emerged as a new frontier for many tech companies in the country.

Some of the biggest firms like Baidu, Tencent, NetEase, and ByteDance have already applied for patents within the sector with some like Alibaba releasing NFTs based on the idea.

Delegates call for metaverse regulation. But delegates in the Two Sessions believe that the nascent industry still has a lot of room for growth, which can best happen with regulations.

According to Kong Falong, a deputy to the National People’s Congress, establishing a national research institute for metaverse can help spur its growth.

Falong continued that with more investments in the industry to nurture talents and support development, China could become the leading country in the metaverse space.

But he also added that such developments would come with issues such as information protection, data security, and speculation.

Thus, it is essential that firms operating within the space are regulated.

# Binance Launches Fiat-to-Crypto Payments Provider Bifinity

**B**inance has launched a new in-house service that will allow direct fiat-to-crypto payment transfers.

The world's largest cryptocurrency exchange has released its fiat-to-crypto payments provider called Bifinity.

The company aims to help other businesses become "crypto-ready" by allowing them to transfer funds directly through the

new feature.

The official press release from the company informed that Bifinity supports more than 50 digital assets and all major payment methods.

These include the two US financial service giants – Visa and Mastercard.

Merchants will be able to employ the "simple, intuitive, and seamless API integration"

to prepare their businesses for cryptocurrency payments. The company also promised low-cost payment processing fees for customers and a "top-tier KYC" onboarding process. Bifinity's President – Helen Kai – commented:

"As the crypto and the Web3 economy continue to grow, we

see greater demand to build improved fiat-to-crypto ramps to bridge the gap between traditional finance and the decentralized and centralized crypto economy. With the launch of Bifinity, we aim to accelerate mass crypto adoption."

# FTX expands to Europe with CySEC approval

Headquartered in Switzerland, FTX Europe will offer FTX products in Europe, including crypto derivatives services.

The global crypto derivatives and spot trading exchange FTX is expanding to Europe after receiving approval from the

Cyprus Securities and Exchange Commission (CySEC).

The new venture, called FTX Europe, would offer leading products of the company to the European clients via a licensed investment firm across the European economic area. The new European venture is headquartered in Switzerland along with a regional headquarters in Cyprus.

Cyprus is seen as one of the reputed jurisdictions that offers a regulated medium for financial

firms to access the European economic area. Thus, FTX would be able to offer its derivative crypto products as well, which is a big breakthrough, given Binance had to shut all crypto derivatives products last year across Europe.

Sam Bankman Fried said their new venture will be "interacting with regulators in various countries across Europe to continue to provide a safe and secure environment for people to trade crypto."

## 4 NFT Collections!

REEFER Token is proud to bring you multiple collections of NFTS! Exclusive Access to next collections, dividend paying, from grow to retail, & for use in PTE game WEED WARS!

### Exclusive Access

By obtaining this specific collection you will have priority before the public of the future NFT collections.

### Dividend Paying

With these you will get staking rewards (Dividend paying)

### Grow To Retail

REEFER Token will offer a convenient way to use block chain records to be transferred from the farmer and processors to the consumer without violating cannabis laws and regulations. When the consumer purchases cannabis from one of our Partner Dispensaries or Vendors the product will be displayed with a QR code. The customer will scan the code and obtain the following product facts along with an NFT to authenticate it!

### Play To Earn Game WEED WARS!

This collection you will be able to use in the PTE game WEED WARS! You can purchase grow houses, grow farms, trap house, dispensaries, seeds, plants, cloning/breeding, security, etc...

## What is REEFER TOKEN?

REEFER Token is Setting a New Industry Standard on how Legal Dispensaries, Smoke Shops, Vape Shops, Cannabis Lounges, Restaurants and Gamers Interact. Cannabis, Crypto, NFTs & Metaverse Combined to Birth the REEFER Ecosystem Revolution!

### Shop Integrations

The platform helps Dispensaries, Smoke Shops, Vape Shops, Cannabis Lounges and Restaurants to accept easy form of payments. Customers will go through our digital Point Of Sale System and Inventory Control through Automated Inventory Management.

### Cannabis Meets DeFi

Decentralized finance, or DeFi, uses emerging technology to remove third parties in financial transactions. You hold your money in a secure digital wallet instead of keeping it in a bank or cash and Transfer Funds in Seconds while Protecting Your Identity!

### Rewards System

Customers get Rewarded for Loyalty & Referring others with a Loyalty Rewards and Incentive Program by receiving discounts & Free Products. This will result in Shops Increased Customer Retention and Strengthening Customer Affinity.

# Terra Is Now DeFi's Network of Choice After Ethereum

The latest rise in the price of LUNA, Terra's native token, has made Terra the second-largest home for all things DeFi.

Terra, the fast-growing DeFi tool kit built on Cosmos, is now officially the second-largest ecosystem in decentralized finance.

According to data pulled from DeFi Llama, Terra currently boasts total value locked (TVL) of just over \$23 billion, marking an all-time high in U.S. dollar terms.

This is roughly twice as much as runners-up BNB Chain (formerly Binance Smart Chain) and Fantom. The king chain, Ethereum, still dominates 54% of the entire DeFi market, commanding \$111 billion.

But if we switch our chart over to TVL expressed in LUNA, the Terra network's native token used to pay

transaction fees and vote on governance, the picture's a bit different.

Instead, the recent spike looks more like a minor blip compared to activity last summer.

This indicates that alongside an uptick in actual activity (folks pouring crypto into the network to do fun DeFi things), the primary motor for the network has been the mooning price of LUNA.

CoinGecko shows that LUNA has risen by nearly 38.8% over the past week. Over the same period, the native token behind Terra's largest DeFi project, Anchor Protocol (ANC), also soared by more than 70%. Anchor is a money market akin to Ethereum's Aave, where users can earn up to 19.49% on their UST (Terra's algorithmic, USD-pegged stable-coin).

## UK's FCA investigated 300 crypto firms in 2021

United Kingdom's FCA received over 16,000 inquiries about possible scams between April to September last year. The watchdog received more than 16,400 inquiries about possible scams between April to September last year. Crypto scams were the majority of these. This led it to investigate potential crypto scam businesses, opening 300 cases.

The UK Financial Conduct Authority (FCA) has announced that it would double down on its efforts to prevent investors from coming to harm. It stated this in a press release which also detailed its plans for regulations and achievement in the past few months.

But not all these cases involved actual scams. In many cases, they were unregistered securities. Presently, 50 of those cases are under investigation for connection to

unauthorized business activities and crimes.

This report shows the extent of unregulated crypto activities in the UK and the herculean task ahead for the commission.

The FCA consumer data review report shows that the body was able to stop the registration of 1 in 4 firms due to the suspicious backgrounds of the team. It has also blacklisted 172 firms, adding them to its list of unregistered crypto businesses.

However, a lot more still depends on the consumers. According to Sarah Pritchard, the executive director of markets at the FCA.

Consumers need to have confidence when making investment decisions, and the data we've published today shows how prevalent scams can be.

Even with all its popularity and global reach, the adult industry faces many challenges. These problems directly affect consumers and performers, while enriching large production and distribution companies. There are a lot of companies that do not offer payment processing services for adult content websites and services, which results in very high transaction fees for companies that do support adult content. There are many startups that are aiming to solve the problems facing the adult industry. One of the finest projects has been launched by the Jacquie & Michel Group.

Jacquie & Michel is one of the top adult entertainment companies, generating millions of euros in revenue every year. The company runs 30 websites, two publications at newsstands, a TV channel, an online store, and 13 stores located across France. To protect against the banking network, Jacquie & Michel created their own cryptocurrency. This new cryptocurrency aims to provide service providers in the adult industry with a complete token economy.

### **Jimizz will be offered across the entire Jacquie & Michel porn ecosystem.**

Having more than 10,000 exclusive videos, Jacquie & Michel already has a rich adult industry projects portfolio. Jimizz is a welcome addition to their

collection. The adult industry has several problems, which Jimizz offers a solution for.

The Jimizz cryptocurrency provides unique features for creators, consumers, and investors to revolutionize this space. Jimizz aims to provide an open and secure platform for fans of adult content. Jimizz is looking to bring back trust and transparency to the industry, using blockchain technology. Likewise, Jimizz is committed to preventing underage internet users from accessing their content.

### **Why is Jimizz essential for content creators?**

Sex workers have historically encountered censorship difficulties and have turned to cryptocurrency. Additionally, sexual workers have faced difficulties maintaining a presence on large platforms like Instagram, where they are often shadow-banned, and their content is closely regulated. This project is community-owned and can be used in many ways. The following are a few reasons why investors should consider investing in Jimizz.

### **Earn interest on your Porn Savings Account**

The owners of JMZ tokens have the opportunity to earn interest by putting their tokens in a porn savings account. On the blockchain, a smart contract

will govern the X-savings account. As time passes, interest will accumulate on tokens deposited in an X-savings account. The X-savings account enables Jimizz to establish a place for itself in the growing DeFi ecosystem by following the principles of staking.

#### **Marketplace for NFT**

The NFT market has been filled with several marketplaces that allow people to buy and sell NFTs. Jimizz will open its own marketplace to connect investors and creators of adult content. The Jimizz NFT Marketplace aims to bring together adult content creators and digital currency enthusiasts to create and trade top NFTs. Through the marketplace, the JMZ currency will be used to create auctions, and bid on and acquire NFT.

#### **Participate in community discussions**

This feature of the JMZ sphere is similar to participatory funding sites, and creators can propose projects and ask the community for funding. For example, a young filmmaker with great ideas but no contacts in business could ask the community to provide funding for one of their videos by making incentives available. Through this method, producers can also finance equipment purchases for their fan base, thereby providing better content for them.

#### **Encourage content creators**

According to the director's choice of payment method, JMZ owners can support creators they like, become producers, and profit from their investment. J&M will purchase the most popular content within the community and make it available on the group's websites.

#### **Holder Assembly**

Jimizz has created a currency intending to empower investors and ensure they have a sense of responsibility. So, they created a platform so that Jimizz token holders could participate in decisions related to the token.

Owners of Jimizz may, for example, choose the charitable organisation that will receive funds raised by the sale of JMZ on the J&M ecosystem. As part of the Holder Assembly, editorial decisions for Jacquie & Michel's productions will also be considered. Investors can also select the themes for the next Élite film, the cover for the next Hot Video, highlight the next Cum-Unity project, and more.

#### **Integration of Metaverses**

In a metaverse, humans can interact with virtual worlds in the same manner as they do in the real world. Jimizz aims to visualise the universe of Jacquie % Michel. Therefore, Jimizz's content and websites will be visualized over the Internet in a huge virtual

space where everyone can log in anonymously. In this way, Jimizz content creators can experience the reality of the metaverse.

### **What are the uses of this token?**

The Jimizz cryptographic token will initially be created on the Binance Smart Chain (BSC) blockchain. BSC offers a lower transaction fee and faster transactions than Ethereum since it uses stacked proof-of-stake authority (PoSA) as a consensus mechanism. YCharts estimates that BSC has over 12 million daily transactions due to this advantage. The BSC community has grown rapidly in recent years, with over 2 million members.

JMZ tokens follow the bep20 standard (equivalent to ERC20 on the Ethereum blockchain). The tokens are fungible as well as programmable. In a smart contract, the conditions for spending and transferring funds are defined at the time of creation. Using this standard, the token will work with all existing BSC wallets (MetaMask, Trust Wallet, etc.) and can be stored on a hard drive, such as the Ledger or Trezor, once purchased.

### **Benefits of Jimizz Token**

#### **The Ecosystem of Jacquie & Michel**

There is a lot of premium content on J&M websites. Accessing that content requires a subscription. However, all J&M websites will offer you access to exclusive content and discounts with the JMZ token.

#### **Rewards for staking**

Jimizz allocates about 7.5% of their tokens for stake campaigns, airdrops, or savings. Owners of JMZ tokens will receive these tokens in the form of interest or an airdrop over time. The limited reserve will be used until the Jacquie & Michel sphere makes it feasible to finance these stake campaigns and X-savings sustainably through transaction fees on the sale of NFTs or the use of services.

#### **Bonuses and referrals**

During the ICO, there will be a referral system. After the sponsor makes a valid transaction, the sponsor and the sponsored will receive 1,000 JMZ each.

#### **Club 69**

Jimizz developed the 69 Club to give investors a lot of benefits when they invest. Members of the 69

Club NFT will benefit from several benefits, such as a percentage off of content purchase.

### **A currency for users and investors**

Jimizz aims to be a popular, accessible currency that entitles its members to special benefits. The NFT Marketplace will be launched in a phased manner, starting with the 69 Club, which will be made available to 69 NFTs. On the J&M platform, these tokens will be used to receive a percentage of every service purchase. Holders of Jimizz tokens will have unlimited access to all sites, benefiting from various advantages linked to the use of the currency.

J&M plans to launch an innovative NFT Marketplace. To get started right away, exclusive content will be made available for purchase as soon as possible. Additionally, they'll include more content in the future. In addition to the very first J&M video, you will receive a Hot d'Or statuette and unlimited lifetime access to our videos.

The creators will be able to submit their own content in V2, which will replace the first version soon. Jimizz looks like a viable cryptocurrency investment. Before investing, you should always conduct proper due diligence. Once the proper verification is complete, you can invest some big bucks.

### **Conclusion**

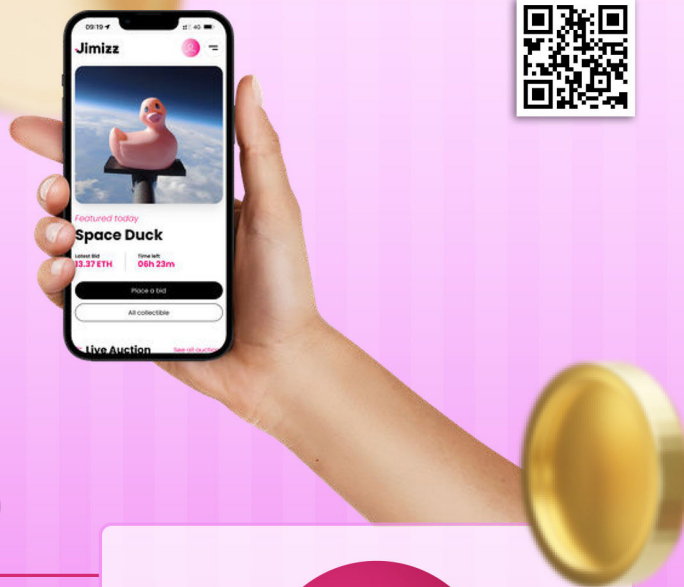

As part of its transition into the world of cryptocurrency, Jacquie & Michel has created its own token, the JMZ. It was launched on Binance Smart Chain to educate users. For Bitcoin and Ethereum, the native networks are too slow and too expensive to adapt quickly to different uses. Nonetheless, Jimizz's choice of Binance Smart Chain is logical since Binance has a solid reputation for fast transactions with low fees and a secure environment.

Jimizz is unquestionably blazing a new path in adult content. Blockchain technology is the reason for this innovative business model. It is proof that technology will continue to develop. The team that created Jimizz consists of experts from different backgrounds. With the decentralised features and benefits associated with blockchain, Jimizz has created a new level of user experience for content creators and viewers. The project appears promising and can be invested in.

## Why choose Jimizz?

### X-savings

Holders of JMZ will be able to deposit their tokens in the X-savings and generate interest over time.

### J&M Ecosystem

The JMZ token will give you access to exclusive content and discounts at all J&M websites!

### NFT MarketPlace

The JMZ currency will be used to create auctions, bid and acquire NFT on our Marketplace.

### The 69 Club

The 69 owners of a 69 Club NFT will receive many benefits, including a percentage on content purchases.

### Cum-Unity

Based on crowdfunding platforms, this feature of the JMZ ecosystem will allow creators to submit projects and call for the community to finance them.

### Metaverse

Visualize the J&M Universe, including its websites and contents on a tremendous virtual space in which everyone can go about anonymously...

### K-hard Game

Buy and combine a model card with additional cards to access unique and exclusive content!

## What is Jimizz?

Jimizz is a cryptocurrency designed by the French leader of the porn industry to revolutionize this space through new features that will benefit consumers, creators and investors.

## Television channels

With the acquisition of Colmax, the group obtained a TV channel present on the biggest cable packages in the country. This was followed by a second channel on 23 June 2020 when Canal+ welcomed J&M TV to its offer.

From midnight to 5am, the channel explores

X-rated content in all its forms, with previews of releases from Élite, reports on the underbelly of the industry, making-of documentaries, interviews, and, of course, an array of soughtafter amateur videos

**250H of original programming each months**

## The most popular NFT receives 3.86M searches per month

Design Bundles' research show that Axie Infinity has been the most researched NFT worldwide, followed by The Sandbox and NBA Top Shot.

Design Bundle, which offers design resources and a marketplace to help designers create and sell their art, published a list of the most searched NFTs of late 2021. They ranked the NFTs based on the number of times they were searched on Google each month.

The results ranked the top ten most researched coins as:

Axie Infinity (AXS) came up first in the ranking, with a whopping 3.86 million monthly searches. Axie Infinity is essentially an NFT based game running on Ethereum, where play-

ers can collect, breed, and challenge each other to win over NFT based creatures called the "Axies."

Launched in 2018, Axie Infinity grew 750x in 2021 and became the top-earning DeFi project. This fame resulted in an exponential increase in the value of Axies, increasing their all-time value to \$4.14 billion and turning them into one of the most popular NFTs.

The Sandbox (SAND) follows Axie Infinity on the list with a considerable gap in between. Nevertheless, it also had spotlights on it throughout 2021. The Sandbox is a virtual metaverse where individuals can purchase lands, build, create their avatars and enrich them via NFTs.

## Almost \$70 Million In Crypto Donated To Ukraine So Far As War Rages On

Ukraine donation numbers have soared following the invasion by Russia. The country which had turned to crypto as a way to receive support from around the globe has found it to be one of its most efficient avenues since then. The amount of crypto donated grew rapidly as prominent figures and entities such as Polkadot founder Gavin Wood and Binance

Wood alone had

donated almost \$6 million while Binance had pledged \$10 to the cause. Other donations big and small had come from supporters around the world pushing the number higher. There has now been almost \$70 million donated to Ukraine so far using just cryptocurrencies.

These donations span across the official crypto wallet addresses of the Ukrainian government as well as those used by non-governmental organizations

(NGOs) and volunteer groups who have been aiding the fight in their own way.

Ukraine Crypto Donations Ramp Up SlowMist recently published a report that tracks the amount of crypto that has been donated to the Ukrainian government over the course of the

war. In about a week, donations going into the tens of millions had been donated to the small country to aid in its fight against its Russian opponents. Ukraine which is a much smaller force compared to Russia had turned to donations to help arm and pay its army.
