Institutional interest is also showing signs of a pick up in the crypto space. Coindesk said its sources revealed that Bridgewater Associates, the world's largest hedge fund, is planning to invest in a crypto fund. However, the crypto investment, when compared to Bridgewater's assets under management, is very small.

Galaxy Digital CEO Mike Novogratz said in a recent interview with Bloomberg that Bitcoin is unlikely to rally in the current environment, with the Fed tightening and the war in Ukraine. However, Novogratz remains bullish in the long term. He said that Bitcoin should reach \$500,000 in five years, else his theory of the Bitcoin adoption cycle would prove to be wrong.

LETTER

We said in our previous analysis that traders may turn positive on a break above the 50-day simple moving average (SMA) and that proved to be the right strategy to adopt. Bitcoin broke and closed above the downtrend line of the descending triangle on March 16, which invalidated the bearish setup.

Although the bears tried to pull the price back below the 50-day SMA, the bulls held their ground, indicating buying on dips. The relative strength index (RSI) has jumped into the positive territory, suggesting that bulls have the upper hand.

Strong buying today has pushed the price above the minor resistance at \$42,600. If bulls sustain the price above this level, the BTC/USD pair could rally to \$45,855. This level is again likely to act as a stiff resistance.

If the price turns down from this resistance, the bears will attempt to pull the pair to the 50-day SMA and extend the stay inside the range for a few more days. Conversely, a rally above \$45,855 could propel the pair to the 200-day SMA.

The bullish view will invalidate in the short term if the price turns down and breaks below the 50-day SMA.

Lastly please check out the advancement's happening in the cryptocurrency world.

Enjoy the issue!

WEEKLY CRYPTOCURRENCY MARKET ANALYSIS

Hello, welcome to this week's 226th edition of Cryptonaire Weekly Magazine. The global crypto market cap is \$1.94 Trillion, up \$210 billion since the last week. The total crypto market trading volume over the last 24 hours has increased by 24.91% to \$102.27 Billion. The DeFi volume is \$14.45 Billion, 14.13% of the entire crypto market's 24-hour trading volume. The volume of all stable coins is \$85.78 Billion, 83.87% of the total crypto market's 24-hour trading volume.

Bitcoin's price has increased 10.89% from \$38,800 last week to around \$43,025 and Ether's price has increased by 19.06% from \$2,545 last week to \$3,030. Bitcoin's market cap is \$817 Billion and the altcoin market cap is \$1.23 Trillion.

Bloomberg Intelligence senior commodity strategist Mike McGlone recently said that investors could remain risk-averse in 2022 due to inflation and war. But he believes that Bitcoin will emerge more mature from this and will continue to outperform gold albeit with "bumps in the road as the Fed attempts another rate-hike cycle."

One sign of accumulation by the bulls is that Bitcoin's ratio of supply with the exchanges has continued to plummet and is at its lowest level since December 2018, according to data from Santiment. The trend has continued in 2022 with Bitcoin on exchange wallets dropping 13.5% in two months.

Institutional interest is also showing signs of a pick up in the crypto space. Coindesk said its sources revealed that Bridgewater Associates, the world's largest hedge fund, is planning to invest in a crypto fund. However, the crypto investment, when compared to Bridgewater's assets under management, is very small.

Goldman Sachs took a major step into the crypto space with a non-deliverable option trade with crypto merchant bank Galaxy Digital. With this, Goldman became the first major US bank to complete an over-the-counter crypto trade. This move is likely to draw other major banks into expanding their crypto offerings to their clients.

Galaxy Digital CEO Mike Novogratz said in a recent interview with Bloomberg that Bitcoin is unlikely to rally in the current environment, with the Fed tightening and the war in Ukraine. However, Novogratz remains bullish in the long term. He said that Bitcoin should reach \$500,000 in five years, else his theory of the Bitcoin adoption cycle would prove to be wrong.

However, there was a word of caution from Ethereum co-founder Vitalik Buterin who said to TIME that cryptocurrencies are unpredictable and volatile compared to legacy investments. Therefore, investors should limit their crypto investments to 5% of their portfolio.

Percentage of Total Market Capitalization (Dominance)

Bitcoin	42.06%
Ethereum	18.73%
Tether	4.17%
BNB	3.47%
USD Coin	2.73%
XRP	2.12%
Terra	1.76%
Cardano	1.64%
Solana	1.52%
Avalanche	1.22%
Others	20.57%

OUR MINTINGS

An overview about our Mintrounds and future drops. So checkout what you have missed and what you can get in future. Dont miss it!

MINT

MAGIC EDEN

ERNEST OG

Original Ernest in Disguise NFT + Spaceship Airdrop •

We sparked the collection with a Spaceship airdrop to all holders. These grant exclusive access + deals on our future launches and allow holders to travel across the Ernest Comics Universe.

STEALTH LAUNCH

Original Ernest in Disguise NFT + Original Orb •

A private sale for our holders, giving them increased chances at minting a Legendary Ernest NFT, as well as the chance to create their own character design for our season two collection.

ERNEST 360

Original Ernest in Disguise NFT + Lightning Cell + EVOs •

An exclusive sale, that gives all 360 minters a "lightning cell"- A pass to our one of one hoverboard sale. *Hoverboards belong to different characters in the comic, mint their board and you'll forever be airdropping that character's items.

ERNEST BEYOND

OUR FINAL PUBLIC SALE !!! •

Collect your Ernest now to begin your journey into the Ernest Comics Universe.

THE EVO TOKENS

Ernest Voyager Orbs (EVO) are our inhouse community currency. You won't be able to trade it on the exchange.

It is coupon that is redeemable for materials and goods produced within the Ernest Comics Universe.

THE EVO TOKENS

There is a total supply of 36,000,000 EVO tokens.

A max of 40,000 tokens will be distributed each month, through our rewards system.

21,500 will be distributed through our Ernest Engagement System (EES) *Weekly Distribution

18,500 will be distributed through our Ernest Holding System (EHS) *Monthly Distribution

The maximum amount of tokens an individual can collect per month is 1000 EVO tokens. *With our current supply, this is due to change once more Ernest's are minted.

CRYPTO TRADE OPPORTUNITIES

BITCOIN - BTC/USD

We said in our previous analysis that traders may turn positive on a break above the 50-day simple moving average (SMA) and that proved to be the right strategy to adopt. Bitcoin broke and closed above the downtrend line of the descending triangle on March 16, which invalidated the bearish setup.

Although the bears tried to pull the price back below

the 50-day SMA, the bulls held their ground, indicating buying on dips. The relative strength index (RSI) has jumped into the positive territory, suggesting that bulls have the upper hand.

Strong buying today has pushed the price above the minor resistance at \$42,600. If bulls sustain the price above this level, the BTC/USD pair could rally to \$45,855. This level is again likely to act as a stiff resistance.

If the price turns down from this resistance, the bears will attempt to pull the pair to the 50-day SMA and extend the stay inside the range for a few more days. Conversely, a rally above \$45,855 could propel the pair to the 200-day SMA.

The bullish view will invalidate in the short term if the price turns down and breaks below the 50-day SMA.

[Previous Analysis...](#)

ETHEREUM - ETH/USD

We suggested in our previous analysis that traders could turn positive on a break above the 50-day SMA and that has proven to be the right thing to do.

Ether broke and closed above the resistance line of

the symmetrical triangle on March 18. The bears tried to pull the price back into the triangle on March 20 and 21 but the bulls held their ground.

The 50-day SMA has started to turn up and the RSI is in the positive zone, indicating that the path of least resistance is to the upside. There is a minor resistance at \$3,045 but if bulls clear this hurdle, the ETH/USD pair could rally toward the 200-day SMA.

This bullish view will be negated if the price turns down from the overhead resistance and breaks below the 50-day SMA. That could pull the price down to the support line.

[Previous Analysis...](#)

Binance Coin rebounded off the support line of the symmetrical triangle on March 14, indicating strong buying at lower levels. This started a relief rally and the buyers pushed the price above the 50-day SMA on March 17.

The bears posed a strong challenge at the resistance line of the triangle on March 19 but a positive sign is that

the bulls did not allow the price to sustain below the 50-day SMA.

The price rebounded off the 50-day SMA and the bulls are attempting to sustain the BNB/USD pair above the resistance line. If they succeed, it will suggest a possible change in trend.

The pair could then start a rally toward \$450. Traders may wait for the price to close above the triangle to turn positive.

This bullish view will invalidate in the near term if the price turns down and breaks below \$380. Such a move will suggest that the break above the triangle may have been a bull trap. The pair could then slide to the support line of the triangle.

[Previous Analysis...](#)

XRP rebounded off the 50-day SMA on March 15 and reached the resistance line of the triangle on March 21. There was a minor resistance offered by the bears at this level but the bulls did not give up much ground.

The rising 50-day SMA and the RSI in the positive territory indicate that bulls have the upper hand. If buyers sustain the price above the resistance line, it will signal a possible change in trend.

The XRP/USD pair could then rally to the 200-day SMA where the bears may again pose a challenge. But if bulls push the price above this resistance, the pair could rally to the psychological level of \$1.

The bears will have to sink and sustain the price below the 50-day SMA to signal that they are back in the driver's seat.

[Previous Analysis...](#)

Terra's LUNA token is in an uptrend. The bulls pushed the price above the all-time high of \$103.50 on March 9 and 10 but could not sustain the higher levels. This may have led to profit-booking by the short-term traders.

However, a positive sign is that bulls continue to buy on dips. The LUNA/USD pair rebounded off the uptrend line on March 18 and the buyers are again trying to push the price to the all-time high.

A break and close above the all-time high will signal the resumption of the uptrend. The pair could then rally to \$118.

However, the bears are unlikely to give up easily. The negative divergence on the RSI indicates that the bullish momentum may be weakening. A break and close below the uptrend line could pull the price down to \$75.65.

PLATINUM CRYPTO ACADEMY'S COLLABORATION WITH BASHOSWAP

Platinum Crypto Academy, a crypto information hub, is thrilled to announce a collaboration with Bashoswap, a multiprotocol decentralised exchange on Cardano.

Bashoswap plans on providing sufficient, reliable, and authentic information to the larger crypto community, as well as facilitate swaps between ADA and other crypto assets as they seek to invest in cryptocurrency. There is nothing as good as making an investment by making informed decisions, thus the collaboration with Platinum Crypto Academy.

Crypto and blockchain enthusiasts can obtain greater results in making informed decisions, especially for those eager to join the Cardano ecosystem but they do not have the necessary information. Platinum Crypto Academy will assist crypto investors and enthusiasts in achieving a well-balanced crypto portfolio and creating a secondary income, thereby helping Bashoswap participants achieve their goals. Platinum Crypto Academy remains a major crypto information hub, providing trading courses, crypto investing, DeFi management, as well as market news that involve top investments.

This partnership will merge a training program that will enable crypto investors to analyse the flow of tokens and other currencies in the financial markets, thereby allowing them to access a variety of cryptocurrency. The collaboration ensures that the Bashoswap tokenomics is able to connect and adjust appropriately to the functionality of its system. With such a collaboration, crypto investors can

minimise the risk they encounter when trading and investing, as well as maximise their profits, thus enabling swift and seamless trade on the platform. Early access whitelist is ongoing for early adopters of the bashoswap platform.

Hopefully, you have enjoyed today's article for further coverage please check out our crypto Blog Page Thanks for reading! Have a fantastic day! Live from the Platinum Crypto Trading Floor.

JIMIZZ ICO HAS JUST ENDED AND IT'S A SUCCESS!

On March 6, 2022, the Jacquie & Michel group have close the ICO intended to raise funds for the financing of its crypto-currency: the Jimizz (JMZ).

Despite a bear-market and a political context not very favorable to crypto-currencies, the amount of tokens sold after 6 weeks of raising, amounts to 466 738 200 tokens, which represents nearly \$2 300 000 euros. As a reminder, the softcap to be exceeded to see the project come to fruition was 1,000,000 euros. The whole Jimizz team is very happy to announce that the project will indeed see the light of day!

During these 6 weeks of sales, the team members were surrounded by nearly 30 ambassadors (Lylou Glams, Joss Lescaf, Laya Feet, Jean Michel Maire, Ania Kinski etc.)

In addition to the support of these personalities, the project can now rely on the experience of Yosra Helal, blockchain developer for nearly 8 years. Her vision of the project allows us to envisage a technical roadmap that matches the ambitions of Jimizz.

The creation of the token's smart-contracts is in progress and the audit by Certik start on March 14th. Following the validation of the audit, the listing of the tokens on PancakeSwap will launch the Jimizz on the crypto market. However, current market conditions and the political environment point to a prolonged bear market. In order to launch the token in the best conditions, it is possible that the Jimizz teams will choose to delay the token's issuance slightly.

To support the release of the Jimizz, the deployment

of stacking campaigns will stabilize the currency by reducing selling pressure.

During the ICO, the group's communication teams were on deck to propose actions to match the stakes. The setting up of sponsorships with partners in motor sports and e-sports enabled us to reach audiences from various backgrounds. This community has gathered around the Jimizz social networks and the implementation of media buying and traffic has quickly made the Jimizz change scale to reach several thousand subscribers on the networks.

To celebrate this success, top investors, ambassadors and the development team gathered for a grand closing party in Paris.

Hopefully, you have enjoyed today's article for further coverage please check out our crypto Blog Page Thanks for reading! Have a fantastic day! Live from the Platinum Crypto Trading Floor.

FAITH TRIBE

A DAO PROJECT BASED ON BLOCKCHAIN TECHNOLOGY

Parisian luxury fashion brand Faith Connexion has launched Faith Tribe, a DAO project based on blockchain technology. This project seeks to create a global network for creative talent aligned globally, so that the talent can enjoy international recognition. The platform will make it possible for designers and artists to create, mint, and sell garment designs as NFTs and physical goods using blockchain technology. Moreover, it is the first collaborative fashion ecosystem that is owned and run by the community.

Faith Tribe is dedicated to providing all the necessary components and guidance to help all designers launch their own brands within the metaverse. Community members will be able to access Designer Studio, which will be used to design apparel, collections, and accessories. Designers will own these digital assets for the rest of their lives. Furthermore, they will be able to decide which of their designs should be implemented into a production unit.

Faith's ecosystem is powered by the ERC-20 token \$FTRB, which is a community coin. This token is designed to catalyse decentralised global innovation by connecting designers, visual artists, curators, fashion enthusiasts, influencers, brands, and buyers through incentive-driven connections. Faith Tribe DAO governs the protocol and will monitor it and make changes based on the votes of the DAO. Additionally, the DAO is established to attract talented designers, distribute ownership fairly, and comply with all regulatory authorities.

Faith Tribe aims to be the world's largest open-source fashion platform, a place for collaboration and

discovery. This project will enable creators to transact directly with their buyers, and participants will receive native tokens for participating. Faith Connexion's project seems very promising, and they have a comprehensive roadmap with a DAO governance structure.

Karnav Shah, Editor-in-Chief of Cryptonaire Weekly, said, "The Faith Tribe ecosystem combines the physical and digital spaces of fashion to create a more inclusive community. With this protocol, creative communities can harness the potential of the metaverse, Web3, and NFT technologies. Additionally, Faith Tribe's protocol offers creators an array of advantages in terms of creating, customizing, minting, and distributing both digital and physical fashion assets. As someone who enjoys creativity, you should take note of this. I will keep you guys informed about this amazing protocol built to reward and recognize talented creators."

\$HNTR TOKEN WHITELIST SOLD OUT & WHAT'S IN-STORE IN 2022 FOR DIGITAL ARMS

Digital Arms, the only industry supported NFT trading platform for the firearm, hunting and gaming industries, moves into 2022 having successfully filled both the seed & whitelist sales, which has now closed.

Using the Hunter Token (\$HNTR), Digital Arms has made it possible for individuals to digitally participate in such industries and to own NFTs developed in collaboration with the world's leading firearm brands.

The future vision of Digital Arms and the Hunter Token is clear. The company has secured partnerships with key industry leaders such as Barrett Firearms, Primary Arms, Head Down Firearms, ZeroTech Optics, CMMG and ZEV with several brands yet to be announced in Q2. These partnerships will serve as a strategic guide that will assist in the development of a vibrant, exciting and thriving NFT firearms and hunting marketplace with incredible potential for its investors and partners.

Providing long-lasting value to the community, all NFTs will be one-of-a-kind pieces of art, built from

computer-aided designs (CAD) to create exact digital replicas of world-famous firearms. Alongside this is the Digital Armory, a blockchain-based platform where users can trade and modify their NFTs to further enhance their rarity, and therefore value.

“Being the only firearms industry supported cryptocurrency and firearm NFT trading platform in the world, Digital arms will not only provide real world utility to holders like attending private functions, range days and merchandise but holders will be able to stake their NFT for greater rewards, further to this Digital Arms plans to host land in the metaverse where holders can show off their collections in the form of gun rooms!” – Ben Clarke, CMO Digital Arms

With the whitelist sale coming to a successful close, Digital Arms is set to announce the pre-sale of its firearm NFTs in the third quarter of 2022. This will be facilitated by the Digital Arms marketplace with initial drops purchased with the \$HNTR token, a core feature of our upcoming website.

The highly-anticipated NFT samples for Barrett Firearms and Head Down Firearms have been dropped, and new brand signings that include ZEV Firearms, Primary Arms and CMMG Firearms signal explosive growth in the space. As more big names enter the marketplace, and as the popularity of merchants increases, so does the demographics it will attract, further strengthening the utility of \$HNTR token.

Not only does the interest come from seasoned cryptocurrency investors, but also firearm and gaming enthusiasts looking for an entry into the NFT market, by owning digital collectibles in a sector they're passionate about. NFT newcomers can join the Digital Arms Discord channel for support and advice, an interactive space with investors, NFT enthusiasts,

gamers, and firearms enthusiasts.

In addition to firearm NFTs, Digital Arms has partnered with Xentrix Studios to create Meta Marines. Due for release Q3 2022, these are Yield generating fully-rigged 3D Soldier Avatars that will have full interoperability with metaverse gaming.

In the first quarter of 2022, investors will also be able to buy \$HNTR tokens on PancakeSwap. And, as Digital Arms begins its integration with Fireblocks, they will be able to improve efficiency and advance security levels to ensure all digital assets are protected from hackers.

For more information about Digital Arms and the Hunter Token, read the company whitepaper at <https://docsend.com/view/gcfdaismvyqcakkh>.

You can visit the company website at <https://www.hunter-token.com/>, and keep up with updates at their Twitter account <https://twitter.com/DigitalArmsNFT>. Join the Digital Arms movement over at their Discord: <https://discord.com/invite/digital-arms>.

ONINO

FARM MAKING MILESTONES IN THE CRYPTO SPHERE: BOOSTING LIQUIDITY AND LAUNCHING ON HOTBIT

ONINO, the simplest solution for your Web 3.0 identity, has recently made milestones in the crypto sphere after announcing its Liquidity Boosting Program, as well as the launch of the ONI token on Hotbit.

Liquidity Boosting Program

Take advantage of the Liquidity Boosting Program that will better your ability to stake your ONI token while at the same time provide liquidity for the upcoming ONINO ecosystem. Liquidity will enable ONINO supporters to stake their ONI token at an outstanding and competitive rate, hence overcoming financial challenges, securing loans and prompting a plan for their financial control.

You can have a look at the updated ONI rates per block.

ONI Listing on Hotbit

Hotbit, one of the world's leading crypto trading platforms, will be listing the ONI token alongside the other 2,500 other tokens. With such numbers, you can be sure that we are adding an opportunity to our members, which was made possible from 14 February 2022.

Launching on a centralised exchange comes with the added advantage that we will be able to reach out to new target markets and in turn allow new members to join the ONINO community. To meet this objective, the launch has seen various campaign strategies in place, including Twitter bounty campaigns, AMA

with the Hotbit community, as well as ONI trading competitions.

Challenges/Solutions and Use Cases

Blockchain tech has led to a loss of track of assets because they are scattered. In addition, there is the absence of a decentralised solution that collects, stores, and verifies data from various networks in a unified ecosystem. As such, other than limiting decentralisation, such problems limit economic growth, free trade, and innovation capabilities.

To offer a solution, we are looking to provide the right technology accompanied by the right products. With this combination, our use cases are diverse due to identity verification, document digitalisation, digital twin solution, asset verification and identification, as well as decentralised insurance systems. The value added by the ONINO ecosystem provides for various applications. Some of the use cases include data access, creation of decentralised and secure insurance systems, validation and verification of documents, ability to represent real-world assets in the form of NFT-like objects, as well as easy identification of users in the digital space.

You will be able to participate in the larger ONINO community with the Liquidity Boosting Program and the ability to trade on Hotbit.

Hopefully, you have enjoyed today's article for further coverage please check out our Crypto Blog Page Thanks for reading! Have a fantastic day! Live from

the Platinum Crypto Trading Floor.

Earnings Disclaimer: The information you'll find in this article is for educational purpose only. We make no promise or guarantee of income or earnings. You have to do some work, use your best judgement and perform due diligence before using the information

in this article. Your success is still up to you. Nothing in this article is intended to be professional, legal, financial and/or accounting advice. Always seek competent advice from professionals in these matters. If you break the city or other local laws, we will not be held liable for any damages you incur.

Intelligent Fluids® GmbH, a German DeepTech company offering Green Chemistry, launched their own cryptocurrency: SMAC Token. Intelligent Fluids (Smartchem) provides fast, environmentally friendly and safe industrial cleaning without using toxic chemicals. Through the creation of SMAC tokens, users can easily support and participate in environmental friendly projects. Smartchem reduces CO2 emissions by more than 50%, saves up to 60% energy cost and reduces cleaning material compensation by up to 70% in industrial cleaning.

SMAC Token: Amazing Features

Tokens you can trade. The SMAC Tokens are utility tokens, which means they can be used to transact with utilities. Moreover, the token can be exchanged for digital and fiat currencies using centralized exchanges.

The use of green chemistry. Using the SMAC Token, industries will be able to switch from harmful solvents to green chemistry. Using green chemistry will reap greater rewards for companies that implement it faster. It will push the global industries to change to green.

Excellent growth potential. The financial plan predicts a steady growth of the company revenues and values. Experts say that the token price of SMAC has skyrocketing potential. within 2-3 years.

Provides support to NGOs. With Smartchem, you can donate to a number of environmental projects,

such as OceanCare.org. Whenever you redeem Intelligent Fluids through the Smartchem platform, you will automatically donate \$0.10 per liter to OceanCare.org.

A sustainable token. SMAC Tokens are sustainable tokens because they can provide the cleaning industry with efficient and sustainable solutions. Smartchem growth is going to disrupt industrial cleaning, thanks to its innovative solutions in the chemical industry. Companies like INFINEON, RF360, PHILIPPS, WÜRTH, HEIDELBERGER DRUCK and many more are already clients.

Why should you use SMAC Tokens to purchase from Intelligent Fluids?

- SMAC Tokens have no fees and are easy to trade on crypto exchanges.
- Great opportunity to get significant discounts on fluid purchases as a reward for a change to Green Chemistry
- Contribute to ecological projects like oceancare.org and to 10 SDGs of the UN
- Transparency and speed in trading plus fallback option
- Ease of use for a cryptocurrency with great potential.

Smartchem bridges the gap between functionality

and sustainability. Intelligent Fluids will provide an era of solvent-free stripping and cleaning that meets 10 UN goals and complies with EU regulations for chemical companies. The company also won the HERAEUS Electronics Accelerator 2021 and received the Global Green Product Award 2021 for circular materials and the Business Hero Award 2022. This green digital Impact coin is listed on stex.com and soon on lbank.info one of the largest and most reputable exchanges for cryptocurrencies globally.

According to Cryptonaire Weekly's Editor-in-Chief, Mr. Karnav Shah, "SMAC tokens are eco-friendly digital tokens that use green chemistry and offer numerous benefits to investors. Furthermore, Intelligent Fluids facilitates fast, transparent donations to different nonprofit organizations by utilizing SMAC tokens. Taking part in the token sale will allow you to contribute to one of the most exciting chemical

projects to emerge today."

This financially focused crypto startup wants to gamify crypto trading. With an always-on presence, a lack of regulation and unpredictable volatility, the crypto market isn't an easy one to break into. New traders are often overwhelmed at everything presented to them and are easy prey for well-designed scams and rug pulls.

That said, it's possible to learn the market and approach trading in a knowledgeable way, but a lot of that knowledge comes with experience. And that experience is only gained by losing money. At least, that's how it feels in the crypto space. However, one startup, Ninja Fantasy Trader, is aiming to fix that issue, creating a safe space for new traders to learn the market.

Gamifying finance

Ninja Fantasy Trader is one of the first financially-focused play-to-earn NFT metaverse games. The title ties itself to the real world, pulling information from real-life markets such as stocks, forex and cryptocurrencies and applying that data to the in-game economy.

Gameplay consists of various modes, with the main mechanic being that of market trading. For example, in a mode the game's design team refers to as paper trading, a player can trade crypto, stocks, and other financial instruments for as much time as they'd like.

What's interesting, however, is that players can

cash out their in-game portfolios for real crypto in the form of the project's NTC token — a Binance Smart Chain (BSC) and Ethereum (ETH)-powered asset.

Alongside typical trading, players can compete in one-on-one and tournament matches. In these battles, players stake their assets and participate in a timed live trading session, with the most profitable trader earning funds from the tournament's prize pool. The more users participate, the larger the prize pool is.

The Ninja Fantasy Trader team posits their game as one for new and expert traders alike. Individual paper trading is presented as a safe way for one to learn the market, while the more advanced

battle modes allow experienced traders to put their money on the line and test their skills.

Become a trading master

Now, players in Ninja Fantasy Trader aren't just any old traders. Instead, game avatars are represented by Ninjas or NFTraders. By owning a Ninja, players can access the trading games and tournaments, build offices and companies, earn investors to generate a passive income and more.

Each Ninja is an NFT with its own unique traits, but there's also a rarer tier of NFTs, Samurais, of which there will only be 31,700. Samurai holders will gain the ability to breed NFTraders called Seniors. Seniors will have upgradable skills not seen anywhere else in the game.

Otherwise, players can use the NTC token to build offices and collect rent or take advantage of staking and participate in governance. They will also earn a VIP membership that comes with trading courses, market analysis, a special trading group, etc.

The Ninja Fantasy Trader developers are holding a presale on March 18 and will be auctioning off 10,144 Samurais. Upcoming features include a marketplace release, community events, and a browser and mobile release of the Trading game.

NINJA FANTASY TRADER

FIRST FINANCIAL NFT GAME IN THE METAVERSE.

JOIN OUR DISCORD 

MINT SAMURAI

ABOUT NINJA FANTASY TRADER

Ninja Fantasy Trader is the First Financial NFT Game in the Metaverse.

Our First NFT Collection is 31,700 rare NFTTraders called Samurais.

Owning a Samurai, you will get access to the first Financial NFT

- ✔ Play to earn in live Markets (Cryptocurrencies, Stocks, Forex, and Commodities)
- ✔ Test your skills as Martial Artist in Trading Battles and Tournaments against other Ninja players.
- ✔ Create Companies and get investors.
- ✔ Own Buildings and Offices, making real estate profit.
- ✔ Get a VIP Membership including trading courses, daily market analysis, signals, access to a VIP Trading Group, and a community of thousands of real traders.

NINJA FANTASY TRADER

TRADING GAME

Play to Earn

Play and Marketplace demo will be available for the first Samurais owners very soon

SAMURAIS

10,144 Samurais are available for pre-sale at a discount price.

They are the rarest NFraders who possess unique features and superior genes compared to the other NFraders.

Owning Samurais gives you more utility tokens (\$NTC) on each successful trade and staking reward.

Samurais holders will grant access to the VIP Membership, including trading courses, daily market analysis, signals, VIP Trading Group, and a community of thousands of real traders.

[See More](#)

NFT COMPANIES

With at least three NFraders, you can be a CEO, obtaining your NFT-Company in the metaverse, increasing your Seniors' levels and limits, earning more \$NTC in each successful trade.

Also, you can get passive income based on investors staking who bet on your company's performance as a hedge fund in the real world.

ADVANCEMENTS IN THE CRYPTOCURRENCY WORLD

BITCOIN FACES NEW 'MILESTONE' IN 2022 AS NEW FORECAST PREDICTS BTC PRICE 'IN THE MILLIONS'

Gold surpassing Bitcoin's returns this year is "unlikely," says Mike McGlone, while former BitMEX CEO Arthur Hayes predicts seismic changes for both assets in the coming years.

Bitcoin "may be primed" for a quantum leap in its development thanks to inflation this year, a Bloomberg analyst has claimed.

In a tweet on March 17, Mike McGlone, senior commodity strategist at Bloomberg Intelligence, released a fresh bullish take on Bitcoin's (BTC) future under the current macro conditions.

Gold beating Bitcoin is "unlikely" this year. Well known for his belief in Bitcoin coming from the latest global financial turmoil out on top, McGlone argued that inflation would ultimately help Bitcoin's "maturation" as an asset class, claiming it would even beat gold in terms of returns.

"Facing the Federal Reserve, inflation and war, 2022 may be primed for risk-asset reversion and

mark another milestone in Bitcoin's maturation," he wrote.

"It's unlikely for Bitcoin to stop outperforming gold, stock market amid bumps in the road as the Fed attempts another rate-hike cycle." An accompanying chart showed Bitcoin's performance relative to a basket of macro assets.

The forecast followed the first in what the Fed hinted would be a series of key interest rate hikes, an event that delivered a modest but welcome boost to BTC price action.

Former BitMEX CEO sees \$1 million BTC. McGlone, however, was far from alone in his prediction. Arthur Hayes, former CEO of derivatives exchange BitMEX, delivered a stark warning about what was to come for global financial markets in his latest Medium post.

[Partnership/Whitelist Signup](#)

Bashoswap DEX

Bashoswap DEX is a new DeFi protocol on the Cardano blockchain that will utilize the AMM protocol for token swaps.

We will also be introducing a single token design for liquidity pools (instead of using the regular pool pairs).

This will be made possible by grouping deposited tokens into a virtual pair with the Bash Virtual USD stable coin.

Our first product is an Automated Market Maker using the Paired token liquidity pool design.

Liquidity pools are smart contracts to which Liquidity Providers (LPs) deposit funds. Once the funds have been deposited to the pool, the AMM's algorithm creates the market for the digital assets to be traded, instead of using an order book.

Truly Decentralised

Non Custodial And Permissionless

Liquidity Providers are rewarded in fees for each transaction

Multiple Protocols To Ensure The Best Liquidity & Fees

We are one of the foremost projects on cardano to utilise The AMM & Programmable Orderbook Model

Earn Passive Income On Your Holdings

Stake your Liquidity Pool Tokens and earn rewards in our Token

FTX Invests \$100M in Banking App Dave, Forms Partnership for Crypto Payments

FTX US will serve as the exclusive partner for any crypto offerings offered by Dave.

Dave (DAVE), a publicly traded banking app, has made a strategic partnership with FTX US, the stateside arm of cryptocurrency exchange giant FTX. The company also received a \$100 million investment from FTX Ventures, the exchange's \$2 billion venture capital fund.

FTX US and Dave are currently exploring how to introduce digital asset payments onto Dave's platform. FTX US will serve as the exclusive partner for any crypto offerings.

The \$100 million investment from FTX Ventures was through a convertible note, a type of short-term debt.

"We consistently look to align with companies that share our vision, have unique and disruptive business models, and can help drive widespread adoption of digital assets. Dave is a great fit as they check all three boxes," said FTX US President Brett Harrison in a press release.

Dave, which counts billionaire Mark Cuban among its backers, went public in January through a \$4 billion merger with special purpose acquisition company (SPAC) VPC Impact Acquisition Holdings III.

Earlier this year, FTX US raised \$400 million at an \$8 billion valuation in one of the crypto industry's largest Series A rounds.

Goldman Sachs Makes Over-The-Counter Bitcoin Trade—First By Major Wall Street Bank

Galaxy Digital, a New York-based cryptocurrency investment firm that partners with Goldman on the bank's Bitcoin futures trading desk, facilitated the transaction.

Goldman Sachs just became the first major U.S. bank to have made an over-the-counter (OTC) cryptocurrency transaction, according to an announcement made public today. The Wall Street giant bought an OTC Bitcoin non-deliverable option (NDO) from Galaxy Digital.

An OTC Bitcoin NDO sounds complicated, but it basically means Goldman Sachs bought a contract betting on the future price of Bitcoin—rather than actually buying the digital asset itself.

Galaxy Digital is a New York-based cryptocurrency investment firm, run by billionaire Mike Novogratz. It has a partnership with Goldman Sachs as a liquidity provider for the investment bank's Bitcoin futures trading desk, which launched last year.

Max Minton, Asia Pacific head of digital assets for Goldman Sachs, said in a statement: "We are pleased to have executed our first cash-settled crypto currency options trade with Galaxy. This is an important development in our digital assets capabilities and for the broader evolution of the asset class."

Goldman Sachs' interest in the crypto world has changed over the years.

bitcci, ENHANCE THE LIVES OF SEX WORKERS!

There is a constant increase in demand for the adult industry. The rapid use of the internet and the advancement of technology changed the industry to a certain extent. The adult industry is thought to be glamorous, a life full of leisure and pleasures, but no one knows about the hardships faced by the sex workers.

Although the workers are integral to the process, they are undervalued and their needs are not paid much attention to. They have to cope with differences and challenges in the industry. They often struggle to find the solutions to their grievances. Nevertheless, escort industries operate in this manner. Now, let's discuss the various aspects of the escort industry.

Facts related to the escort industry

The escort industry consists of the various agencies that provide escort services to clients and customers. During the booking process, a fee is paid to the escort agency and the other fees can be negotiated directly with the escorts. The escort agency serves primarily as an intermediary between the escorts and the clients, and facilitates the face-to-face meetings. The other processes are facilitated directly between the workers and the clients.

Considering the different legalities, escort agencies publish various advertisements in the newspaper for the purpose of hiring escorts. There is basically

a list maintained for different kinds of escorts depending on their age and appearance, and the escorts are selected accordingly.

Coming to the amount of money that is earned by the escorts, it depends on various factors. There is a certain percentage paid to the escort's agency and some for the house allowances, and the rest goes to the escorts. An independent escort might charge a different amount as no agency is involved in the process.

In order to ensure the safety of the client, all information related to the client is kept. In addition, all escorts are entrusted with contacting the agency upon arrival at the location and even after leaving it.

Introduction to bitcci life

The bitcci group was founded by Christoph Elbert in the year 2017 with the objective of transforming the sex industry and creating a positive impact on it. The aim of developing the bitcci platform was to address the global problems in the sex industry and offer them a holistic solution. bitcci takes all necessary measures and steps in order to improve the lives of sex workers.

bitcci's purpose is to provide both sex workers and customers with a safe and protected environment that facilitates the exchange of ideas in a much more productive and efficient manner.

The bitcci platform also examines the various issues that may arise in the adult sector with regards to the digital experience. These include the use of blockchain technology, and IT services. In addition to continuously innovating, bitcci life aims to develop innovative and creative approaches that, if implemented in the adult industry, could prove to be a digital revolution.

bitcci allows sex workers to offer their services via paid telephone calls, photographs, and video chats, among other methods. This is in order to create an environment that is safe and effective for both the sex worker and the client.

More about the bitcci platform

The bitcci payment system is phenomenal in its working. The bitcci platform has also launched its cash token. In many cases, cash transactions are difficult and may not always be available on time. In addition to offering cashpoints that can be used for transferring money to others, bitcci also eliminates the hassle of using cash only.

bitcci token store – bitcci has opened its first token store worldwide. Northern Cyprus is the location of the bitcci token store. This is because the people living there have a strong interest in crypto exchanges and there are many crypto exchange offices and a crypto investment culture prevails there.

Furthermore, bitcci's main purpose for opening a token store is to promote and market its bitcci cash token. bitcci has the potential to change the sex industry for the better with its transparency, trust, and decentralisation features.

bitcci also offers an API system, which helps to connect all of its clubs, platforms and software applications. The bitcci API can be used by external business partners to make their own business profitable and eliminate the process of building their own system, which would be complex in nature.

APIs for the bitcci platform use modern technologies such as the REST architecture, https protocol, JWT-JSON web token, and Oauth2.0 authorisation, which is token-based. bitcci life is also looking forward to develop a robust AI system which would boost the bitcci ecosystem.

bitcci IEO listing – In addition to a revolutionary ecosystem, bitcci has recently completed its IEO listing. The IEO was set to begin on 1st March, 2022. To begin trading, bitcci will list its initial offerings on reputable and trusted exchanges.

They are ten in total. Indoex, Coins Bit, Dextrade, Fine Box, and P2PB2B are some of the most popular and powerful exchanges. More are scheduled to be announced at a later date. All of these exchanges offer an extremely high level of security and transparency to their users.

What makes bitcci the preferred solution for escorts?

For escorts, bitcci life is one of the most effective platforms. It is currently one of the preferred solutions for bitcci. bitcci has developed an ecosystem that integrates modern technology and the latest and innovative IT solutions in order to be able to operate more efficiently. bitcci also has a club known as the bitcci life club. Similar to other clubs, the club is also equipped with modern technology and is currently compliant with the General Data Protection Regulation.

The kind of safety that the platform provides also becomes one of the factors for the sex workers to prefer bitcci. bitcci's software is a forensic software that records the identities of workers and records the work of those workers. By using the bitcci software, regulators can access the real-time data of escorts and sex workers in a safe and reliable manner by connecting to an interface within the bitcci life ecosystem.

Besides the web portal and mobile apps, bitcci is also in the process of launching the web portal. This is where photos and video calls can be made within a safe environment. The above services offered by bitcci make it one of the most preferred solutions for escorts.

How does bitcci improve the lives of sex workers?

bitcci provides various offers and facilitates to its workers and thus helps in improving the quality of life. Starting with the comfort and lifestyle that bitcci offers, the following are the most sought-after comforts and grievances that an escort gets on the bitcci platform:

- The worker has the option to choose the workplace.
- There are flexible working hours, which could be chosen by the workers at their own will.
- The workers can even select a client of their own choice.
- The kind of services that a worker offers is also totally dependent on the worker.
- In the attached bitcci hotels, workers are provided with a living area that is different from their workplaces.

- There are no restrictions on any kind of movement; holidays are easily provided by bitcci.

- There are also various kinds of offerings made to the workers like the sports offering, personal assistant services, textile services and other relevant extended services.

- Whenever a worker earns an income through physical means, 100% of that income is paid directly to the worker without any commission being paid to bitcci.

The other packages and benefits offered to the workers are as follows:

All-inclusive package

Adult workers are an integral part of the business model of bitcci. bitcci does everything in its power to eliminate any problems that may arise for its workers. Additionally, to all the comforts and conveniences, bitcci offers its employees various self-determination programs to help them balance work and life at the same time.

Eliminates the communication barrier

Communication is the key in any organisation. Effective communication with the authorities in the organisation helps to achieve productivity and efficiency. Often, the sexual workers face problems communicating with the higher authorities for completing the various formalities and documentation required.

bitcci has a business model where this issue of communication is taken into consideration and various strategies is devised in order to neglect the barriers to communication. With bitcci's automation tools, sex workers would be able to complete all kinds of documents, such as official registration, payments, and tax advice, in an organised way. This would be through their smartphones, which would be really easy for them to work.

Channel of marketing

As part of bitcci, workers are able to market their services through a well-organised and robust system. A portion of the service includes arranging for the agencies to have professional photographs and videos taken by the workers and then promoting their services. The workers can advertise their services either physically or digitally on the online bitcci portal.

Health management and security issues

bitcci provides the highest priority to the health of its sex workers. It looks after the minute details and provides various health benefits like health insurance, accident insurance, arranges drug counselling and telemedicine services also.

In addition to offering comprehensive health care, bitcci also pays attention to the next key factor, which is security. Bitcci's buildings and accommodations have been constructed with the highest level of security, and the most modern equipment is available to assist the workers, both personally and technically.

bitcci provides debit cards

bitcci also issues bitcci debit cards to workers in order to participate more effectively in society. It was noticed that most of the workers did not have bank accounts and usually received cash payments. This limits their activity and kept them away from the modernised world.

Because bitcci noticed this issue, it provides bitcci debit cards, along with IBAN account numbers, which is licensed with fintech partners, and this is a significant help for workers.

Education and pension facilities

bitcci offers education and pensions funds to its workers, which is unlikely offered by any other organisation. bitcci has its own bitcci academy, where the sex workers can gain knowledge or training about anything that they wish to.

There are various training programmes organised by bitcci, which could provide training related to the client's management, health managements, hygiene, sales, psychology, issues related to nutrition, work-life management, etc. Additionally, the company provides bitcci pension funds in cooperation with licensed financial service partners. This helps the sex workers to remain pain-free and secure for their retirement.

Self-marketing

bitcci offers its workers the chance to market themselves on their own through the bitcci.com website. By making effective use of digitalisation, bitcci is enabling its workers to provide services globally through its website.

A chat system would be available to the clients, which would be based on AI software and available in 20 languages. This serves as a golden opportunity for the sex workers as they would be able to gain

as many clients as they want digitally and earn accordingly.

What are the main functions of bitcci ID?

bitcci ID is one of the plausible features of bitcci. The bitcci ID is the first identification and verification system designed for the sex industry. By using bitcci ID, all the documents and data of the workers can be validated within seconds. It helps in enhancing the security of their websites and only allows those sex workers to work who do not have any criminal record and are not blacklisted on the bitcci.com portal.

bitcci can verify a huge amount of data in a shorter period of time. The bitcci system can verify around 9,000 different types of ID documents from 193 countries and also in 130 languages. Having known about bitcci ID, let us discuss more about the bitcci.com portal.

The bitcci.com portal is one of the platforms that provides live streaming of sex workers. Using it, sex workers can communicate with all clients around the world. There are several modules attached to the bitcci.com portal.

The different modules include the feature of live streaming, sharing of photos and videos, live chat features, etc. bitcci cash can also be used to generate clients and customers internationally when integrated into the bitcci platform.

Conclusion

bitcci has a mission and vision to revolutionise the sex industry to a significant extent. It provides various advantages and benefits to the workers. The plausible services offered by the bitcci to its workers include a bitcci academy for training services, a regular health check-up, modernised infrastructure and accommodation, modern and regulated club operation, and many more.

bitcci aims at enhancing the lives of the sex workers and bringing a revolution in the sex industry. It has all the features and services that any worker would need for their job. bitcci uses its own token, which could be used in order to build the transparency and the trust between the client and the workers, and thus all the bitcci systems are totally AI-based and secured to a considerable extent.

Bitcoin a Starting Point for Developing Central Bank Digital Currency, Says Big Four Firm Deloitte

One of the biggest accounting firms in the world says that the underlying technology behind Bitcoin (BTC) is a good starting point for developing an efficient central bank digital currency (CBDC).

According to a new report from UK-based accounting giant Deloitte, blockchain-based cryptocurrencies have attributes that when combined with the properties of fiat currencies, could result in cutting-edge state-backed digital assets.

What would happen if we combined the best attributes of the technology of cryptocurrencies with the features of an established fiat currency under the sponsorship of a central bank? The result very well may just be a new

method of handling payments that would revolutionize the current system.

With the potential to reduce costs, reduce errors, speed the transfer of money, balance privacy with anonymity, and do it without the day-to-day operational need for a centralized organization, whether commercial or federal, the result could truly be transformational.

Such a system would need to have important roles for banks...and it would need to have the full endorsement of the central bank."

Deloitte points to the inner workings of Bitcoin as a framework that central banks could use to bolster the utility of CBDCs.

Government of Malaysia proposes Bitcoin, crypto as legal tender

The Communication Ministry of Malaysia has proposed to the Malaysian government that cryptocurrency such as bitcoin should be adopted as legal transfer, its deputy minister Zahidi Zainul Abidin told Parliament on Monday.

The Communications and Multimedia Ministry of Malaysia proposed today that digital currencies such as bitcoin (BTC) should be adopted as legal tender to help the younger generation who are active users of the currency,

especially on non-fungible token (NFT) trading platforms, says Datuk Zahidi Zainul Abidin, deputy minister of the Communication Ministry of Malaysia, reported by Bloomberg.

"We hope the government can allow this," Zahidi said. "We are trying to see how we can legalize this so that we can develop youth participation in crypto and assist them." In Malaysia, cryptocurrency falls under the purview of the country's central bank and Securities Commission, the deputy minister

added.

Increase the youth's involvement in digital currencies
The Deputy Communications and Multimedia Minister said the ministry will look into ways to increase the youth's involvement in digital currencies as it is the future of finance.

"All of these are under the purview of Bank Negara Malaysia and the Securities Commission. We hope the government will allow and legalize this so that we can increase the youth's uptake of cryptocurrencies," the deputy minister said.

NUNU SPIRITS: NFT GAMING ECOSYSTEM HELPS TO PROMOTE GREENERY IN REAL LIFE!

NFTs have made a significant impact on technology. From art and sports collectibles to real estate and gaming, they are disrupting a number of industries. NFTs are now a part of some exciting new developments, such as casual gaming. Several gaming NFT models let you earn tokens while playing, and you can also trade them with other players.

Nunu Spirits is an excellent example of a Play to Earn NFT gaming model. Nunu Spirits comes with GameFi technologies and token-based ecosystems to transcend ephemeral rewards. With Nunu Spirits, gamers are rewarded for their gaming efforts beyond the game world. So, what exactly is Nunu Spirits and how does it work? Throughout this article, you will gain a deeper understanding of Nunu Spirits.

What is Nunu Spirits?

The Nunu Spirits is a game universe consisting of a collection of NFTs that can grow into trees that are also planted in the real world. The game is an environmentally-friendly NFT game that combines casual gaming and blockchain technology so that players can earn while playing it. The growth of the Nuniverse is based on players' tree planting. Participating in the game is the easiest way to save the Nunu's and the forest simultaneously.

You can collect and swap 3D NFT characters with the game while playing competitive and cooperative games like racing, rhythm, and building. The more NFT characters you collect, the more trees you plant and the more powerful you become in the game. This game has thousands of unique NFT characters designed by Nunu Spirits. Nunu Spirits enables you to unlock new game modes and areas by growing real plants. This game is designed in Unity3D for mobile platforms and is ready for VR/AR/3D printing in the future.

What makes Nunu Spirits good for the environment?

Games allow you to collect digital items that are always available, but these items don't solve any real problems. The environmental impact of these systems is becoming more problematic. On the other hand, Nunu Spirit is a gaming ecosystem that encourages planting trees and the collection of green NFTs. NUNU NFTs offers a novel way to own items due to the immutable ledgers of the blockchain, which store, record, and allow for trading of these certifiably unique items. A tree planting initiative, Nunu spirits works throughout the world to plant trees. Initial tree planting partners hail from Brazil, Australia and Southeast Asia.

Even though many cryptos promote green initiatives, very few are intended to directly impact the environment. Nunu Spirits addresses this problem. Nunu Spirit's foundation consists of three main elements – a fun game, a collectible, and an ecological mission. By playing this game, players worldwide can contribute to reforestation efforts. Below are some of the most notable features it offers:

Encourage ecological action

Nunu Spirits' game world is so cute and fun that it actually connects to the real world through direct and traceable ecological actions. Nunu Spirits' game world reflects the real world. The game allows players to keep track of how many trees they planted in the real world and where they are. In other words, the more trees the player plants in the real world, the more rewards they will receive in-game. Nunu also collects eco funds from token sales and sustains itself through transaction fees.

Next Generation NFTs

The Nunu Spirits brand stands out among other NFTs. With tokenising actions like tree planting, players can see the tangible impact of their ecological efforts. Additionally, Nunu rewards players with NUGO tokens for their actions in the game. In addition to powering the game's progression, these tokens can also be exchanged.

The game's NFT assets are being created in 3D within a fully-functional 3D engine called UNITY 3D. Those who have NFTs can even print them themselves on 3D printers at home. Further, they will be able to enjoy more immersive gaming scenes in the future with immersive technologies such as VR, AR, and XR.

Have fun playing games

The game Nunu Spirits allows players to collect cute nature spirits that they can play within a brand new world filled with unique and exciting party games, such as Parkour Tag, Racing, The Floor is Toxic, and Capture the Flag. This game is being developed in Unity 3D, one of today's most popular and flexible development platforms. With custom in-house architecture systems in place, the team can easily add party games and content to the game, so users need not worry about game bugs and updates.

Mission of reforestation

Nunu Spirits is engaged in reforestation missions with decentralised governance. Investors can vote on new features, eco-fund allocations, and more with decentralised governance. Nunu promotes environment-friendly initiatives by awarding in-game rewards for real-world cleanup efforts.

Tokenising the economy

Nunu Spirits strives to create a decentralised governance model. Nunu Economic models use tokenisation to create a token that can be traded on exchanges. The fees collected from each transaction fill the platform's treasury, which funds future development and eco-initiatives. Furthermore, NNT holders can determine how the treasury funds should be used by casting a vote.

What is the main use of NNT, Nunu & NUGO?

The environmentally-friendly project Nunu Spirits has different tokens. This includes three types of tokens: Nunu, NNT, and NUGO. Let's take a look at the uses of these three tokens in Nunu Spirit.

Uses of NNT Token

The NNT token has a fixed supply, making it a key asset for storing value in the ecosystem. The NNT holders will decide how to allocate resources and design the network and system upgrades needed to shape Nunu Spirit's future. As an ecosystem currency, NNT can be used to fund reforestation, system development, and maintenance. The NNT can be used to buy and sell Nunu in-game and on the web. Additionally, NNT can be exchanged for other currencies on exchange sites.

Uses of Nunu Token

With NUNU Token, there can be no ambiguity about ownership of digital items. It ensures tangible engagement by ensuring ownership of unique assets. Several NUNU abilities make gameplay more interesting. There are many ways to build a collection, including focusing on rarity, limited supply, and one-of-a-kind pieces. NUNU Elders let you grow new NUNU Seedlings and give you better chances for seasonal Seedling drops. Whenever a Nunu becomes a tree, tree data is automatically recorded to the NFT itself. Additionally, NUNU's can be downloaded as STL files. Those concerned about ownership can use prints that include proof of ownership.

Uses of NUGO Token

There is no fixed number of NUGO tokens available. Players can earn them through playing the game and burning them upon use. The NUGO token can only be generated through gameplay and interaction with the game world. You can buy and

sell it on the market, and it is burned when you use it. The NUGO is the basic currency used in the game and makes the world go round. A small fee is associated with NUGO transactions that range between 3-4% and is converted to NNT behind the scenes and added to the treasury.

You can upgrade your Spirit to boost game stats and gain new abilities. Upon upgrading from Spirits to Elder, the more advanced level is available. Upgrades to the Elder will allow you to plant real trees and boost the game's power. While playing the game, you can earn NUGO that you can then sell. NUGO also offers discounted consumable items for a quick boost. In addition, you can use NUGO to pay for certain activities with prize pools.

A brief overview to Nunu Spirits game world

Nunu Spirits is set in a pretty fantasy world with bright colors, but it's not just a game. There are parallels between our world and this fantasy world. Planting real trees in the real world directly affects the game world; the more trees players plant in the real world, the more the game world expands.

All players have their own personal safe zones in the game. These are the places where Seedlings play and frolic. In simple ways, players can interact with their Nunu's. You can pick up Seedlings and place them in weird places to see what happens. Guests will also have the opportunity to see your sanctuary, your collection, your awards, and even leave gifts on your island.

After being nurtured by spending time and sometimes NUGO in the Nunu world, Seedlings become Nunu Spirits. They can then leave their homes and venture into the wilds of Nunu country, far from the safety of their own homes.

It's a place where players can frolic and play in sandbox levels and participate in friendly competitions, like parkour races and rhythm challenges. Players initially interact asynchronously; they may run into ghosts of previous players or continue where they left off. Thus, players will not have to wait for matchmaking and will be able to drop in and out of events more easily.

Nunu Spirits' plans for the future

Unlike other game ecosystems, Nunu Spirits have standards such as play-to-earn, governance, and marketplace, but also adds 3D NFTs and user direct eco-action. In addition, the gameplay is relevant to both genders and covers a broad age demographic, everyone can get behind planting trees! The team has a vast amount of experience with game development, smart contracts, and NFTs, along with excellent connections within the industry.

Since Nunu's ecosystem is up and running, the team wants to continue building and improving the game's features. There is an ambitious expansion plan that involves buying real estate in-game. It allows players to create their own content for a section of the Nunu world.

The game world may include a public space where other players can interact and visit. Additionally, you receive certain in-game benefits like resource

generation and drop rate increases. This gives the game an extra play-to-earn component, significantly strengthening the ecosystem.

Conclusion

Humanity's best traits are embodied in the Nunu Spirits. There are so many amazing things humans can do on this beautiful planet. Just imagine if we planted a million trees together. People together with Nunu Spirits can accomplish so much for the environment. The implementation of several innovative solutions will lead to creating an environment for NFTs that is both eco-friendly and sustainable. The initiative includes establishing a crypto-currency and new financial technologies that are green and rooted in nature.

The Nunu Spirits brand is an ingenious creation that highly values ecology and its impact on the environment. The Nunu Spirits company is paving the way for a greener future by combining NFTs and planting trees.

Metaverse To Have A New Lender – The World’s First Crypto-Based Bank

A decentralized bank that will cater to cryptocurrency transactions will be the new addition to the growing list of lenders making a presence in the metaverse.

Meta Bank Defi announced Monday that it is developing a new platform to capitalize on the unique benefits of decentralized finance and to facilitate the development of simple and dependable digital banking procedures.

According to the crypto project’s website, it is the world’s first decentralized 360-degree solution bank that is making a foray into the metaverse.

The concept envisions a society in which “all people are equal and can live and earn freely regardless of color, gender, ethnic origin, sexual

orientation, language proficiency, or immigration status,” Meta Bank stated in a news release.

The Metaverse To Welcome A New Bank According to Meta Bank, online banking remains a time-consuming job in the majority of developing countries because of lack of infrastructure and other resources to provide fast and effective internet financial services.

Corporate banks and other financial institutions wield too much control over private individuals’ wealth and have been known to put their own interests ahead of those of the clients they were designed to serve.

Terra Founder Hints at \$3 Billion BTC Purchase, Explains New Bitcoin-Linked Tokenomics

Terra founder Do Kwon hinted at a future purchase of \$3 billion worth of bitcoin to supply the reserves of the protocol in a recent Twitter Space shared with bitcoin enthusiast Udi Wertheimer. In the same Space, Do Kwon explained the new mechanics that the Terra ecosystem is introducing in

order to use bitcoin as collateral for its flagship decentralized stablecoin, UST.

Do Kwon Directs the Terra Ecosystem to Bitcoin Do Kwon, founder of Terra and Terraform Labs, made some important announcements regarding the future of

the Terra ecosystem and its tokens in a Twitter Space hosted by Udi Wertheimer. One of these announcements has to do with the inclusion of new token mechanics that take into consideration some form of bitcoin in the Terra ecosystem. In this regard, Kwon announced Terra is working toward bringing a form of tokenized bitcoin to the Terra blockchain in the most decentralized form possible.

Kwon also explained that with the inclusion of bitcoin, UST would become a hybrid stablecoin, allowing users to exchange \$1 worth of UST for \$0.99 worth of BTC. This would effectively allow users to redeem BTC by using UST for a premium of 1%, almost in the same way that LUNA is being used right now. Kwon clarified that these mechanics will be explained in the near future in a more detailed way.

Cardano Completes Network Upgrade, ADA Reacts To The Upside

Cardano remains one of the best performing assets in the crypto top 10 by market cap for the past 7 days. ADA's price, with Avalanche (AVAX), Ethereum (ETH), and Solana (SOL), trades with over 15% in profit over this time period, and gains could extend on different timeframes.

At the time of writing Cardano trades north of \$0.90 with a 2.5% profit in the last 24 hours.

While Bitcoin and larger cryptocurrencies by market cap move sideways, Cardano's reaction to the upside could be driven by its increase in the number of project building on its ecosystem, and recent improvements implemented on the network.

Cardano's developer Input Output Global (IOG) has been focused on optimizing and improving the network.

Today, this company revealed their latest update proposal to increase the per-block Plutus script memory units limits from 56 million to 62 million.

This update, the company clarified, will aid the network's scalability. Plutus is one of Cardano's recent most recent components as the network made a transition to implement smart contract capabilities.

Operating a platform, Plutus enables users to leverage a programming environment. In that way, users can build their own smart contract without needing technical skills, maintaining code, and removing the need to use a full development environment.

Huobi Global launches livestreaming platform Huobi Live, inaugural show on 28 March

Huobi Global, one of the world's leading digital asset exchanges, today announced the launch of Huobi Live, an integrated live streaming platform on the Huobi Global app. To kick off the launch, Huobi Live will hold its inaugural streaming session on Monday, March 28 at 20:00 (GMT+8).

Huobi Live is designed to increase engagement both within and beyond the Huobi Global community by delivering thoughtful, curated commentary on market and investment trends. Livestreamed content on Huobi Live will consist of a mix of official shows hosted by Huobi experts and informal sessions hosted by an ecosystem of influencers. Select live streaming sessions

will be simultaneously streamed on the official Huobi Global YouTube and TikTok channels.

A New Channel for Creators to Engage Audiences

Huobi Live will open up a new channel for influencers and content creators to engage both existing and new followers. Influencers and content creators will be able to set up their own channels, grow their audiences, and even reward viewers with incentives.

Within the Huobi ecosystem, content creators will be able to reach over tens of millions of users and followers across multiple channels. Huobi Live will work closely with content creators to grow their audiences and produce quality content.

Welcome the Future of **Fine Arts**

World's first and only blockchain based artpiece exchange platform

We believe in a world where not only the lucky and privileged few, but everyone can invest in first-class artworks. Blockchain is the safest way to achieve this.

How it Works

WHY BUY ARTEXX TOKEN NOW?

The digital currency of the Artex ecosystem is Artex Token. Artex token will be used for the function of all privileged functions of the platform and for shopping transactions.

Low Total Supply
Artex has only 100m total supply. First year the circulating supply will be only 50m.

A Promising Future Project
Artex is, world's first and only blockchain based fine arts exchange platform. It is the future of art market and one and only in its field.

Low Market Cap
You will be an investor in a project with great potential very early. Artex provide a future of arts.

ART EXCHANGE

BUY NOW

WHAT IS ARTEXX?

With the Artex's smart contracts, you can buy and sell the amount you want from the works listed in the market. during the pre-sale process. The Artex Art Market aims to:

- PROVIDING LIQUIDITY TO THE STUCKED ART MARKET.**
- SUPPORTING ART AND ARTIST RIGHTS WITH A MAGNIFICENT TRANSPARENCY.**
- A DEMOCRATIC DISTRIBUTION OF FINANCE IN THE ART MARKET.**
- A CRYPTO EXCHANGE BASED ON A PHYSICAL AND VALUABLE COMMODITY.**

HOW IT WORKS

Artex ecosystem based on blockchain and we solved issues of current and future

- 1. Artwork Listing Request**
- 2. Artwork Valuation Commission**
- 3. Tokenization of Artwork**
- 4. Listing Artworks on Artex**
- 5. Trading on Fine Arts Token**

Cryptocurrency Platform AEX Launches Program to Boost Vietnam's Crypto Ecosystem

AEX is investing \$100 million in boosting the blockchain industry in Vietnam, leveraging the growing interest of its people in decentralized technologies.

Cryptocurrency Platform AEX launches a program to boost Vietnam's crypto ecosystem.

Cryptocurrencies have

more than just helped many people overcome economic crises in their countries; they have become a key figure in the global economy. As a result, more and more companies are looking to promote their use as a way to boost the regional and local markets.

On March 21, digital asset platform AEX announced the launch

of a "green fund" to empower the crypto ecosystem in Vietnam. The endeavor will be backed by an initial \$100 million investment.

AEX aims to support the development of DeFi, GameFi, and NFT projects taking place in Vietnam. To carry out this initiative, the company will invest in both

upstream and downstream industries in the country. As such, any Vietnam-based company can apply for access to the \$100 million fund.

\$100M To Help Vietnam-based Blockchain Projects

Gemini receives license to provide electronic money services in Ireland

The license does not allow Gemini to operate as an exchange in the

country, but it will let it passport e-money services throughout the EEA.

Cryptocurrency exchange Gemini has received an electronic money license from the Central Bank of Ireland. It was the 18th organization to receive the license, and the first since October 2020. Gemini joined such license holders as Coinbase, Stripe, Square and Meta.

The e-money license, for which Gemini applied in early 2020 and received on March 14, will allow it to issue electronic money, provide electronic payment services and handle electronic payments

for third parties. It will also enable the company to passport those services to European Economic Area countries, which are European Union members, Iceland, Liechtenstein and Norway. Gemini already provides exchange services in those countries.

Gemini also provides exchange and e-money services in the United Kingdom, thanks to its authorization by that country's Financial Conduct Authority.

Central Bank Of Russia Steps Up Monitoring P2P Transactions Including Crypto

The Central Bank of Russia (CBR) has proposed that the nation's commercial banks tighten monitoring on crypto and regulator operations. The objective is to stop transactions that attempt to evade its "special economic measures to counter the outflow of foreign currency abroad,".

This proposal mentions scrutinizing crypto trading, which is allegedly one of the ways of withdrawing capital in Russia. This was mentioned in the letter by the CBR's vice chairman Yuri Isaev sent to other banking organisations for them to start inspecting "abnormal" transactional activity that also includes any out-of-the-ordinary spending patterns.

The financial institution will target any withdrawal through digital currencies such as crypto, or similar kinds of expenditure.

Suspicious Transactions Will Be Blocked
Federal Financial Monitoring Service of Russia (Rosfinmonitoring) will be required to inform about suspicious transactions so that these can be blocked immediately. During the beginning of the Russia-Ukraine war, special measures were approved that would put a tab on foreign currency outflow as a part of economic sanctions. Making realty purchases, securities, and also other assets from other unfriendly nations or jurisdictions will require government authorization.

The Bored Apes Get Richer—And More Cringey

It pays to be a Bored Ape—with free APE tokens and more rewards to come. But the Ape universe is also a little embarrassing, and has fueled NFT hate.

Have you heard? NFTs are dead—again. "Interest in NFTs and the Metaverse Is Falling Fast," reported Forbes last week, citing Google search trends. Coin Telegraph said the NFT market "died" in September, and before that, a slew of sites declared NFTs dead last June. But they're still here, alive and well.

And that was all before ApeCoin (APE), the ERC-20 token that launched this week as the latest financial reward for members of the Bored Ape Yacht Club.

The token bears the Bored Ape logo, owners of a Bored Ape NFT or Mutant Ape NFT were able to claim thousands of free APE, and Yuga Labs, creator of the Bored

Ape Yacht Club, says it will "adopt ApeCoin as the primary token for all new products and services." Yet the P.R. team behind the token took great pains to say that ApeCoin was launched by the ApeCoin DAO, not by Yuga Labs or Bored Ape Yacht Club, even warning, "It's probably tempting to write that ApeCoin is from the Bored Ape Yacht Club to simplify things, but it's not accurate."

It's more "decentralization theater," but for members of the Bored Ape Yacht Club, it's all gravy. The Bored Ape benefits keep coming: exclusive merchandise sales, airdrops of "serum" that created another instantly valuable NFT, access to chat rooms and in-person events, and now free ApeCoin, which boasts a market cap of \$3.7 billion just two days after it started trading.

REEFER TOKEN USING BLOCKCHAIN TO TRANSFORM THE CANNABIS INDUSTRY!

The cannabis industry has been a sleeping giant for quite a long time. Huo Tuo, a Chinese physician, leveraged cannabis aesthetic properties between 140 and 208 CE. The Chinese surgeon often used weed powder and wine to numb patients' pain. Strangely, China's law prohibits using or possessing this magic plant. Some countries, however, have embraced the truth that marijuana extracts can help alleviate some health-related problems.

Consequently, the global legalisation of cannabis has become a trend to reckon with. For instance, 39 states in the US have legalised the medicinal use of marijuana. Pastime use of cannabis is legal in 18 states, and more are expected to join the bandwagon. Challenges are also springing up as the fight to decriminalise weed takes ground.

What are the Biggest Challenges for the Cannabis Industry?

Legalisation remains the top challenge in the cannabis industry. Nonetheless, the untapped market is also experiencing other common challenges with up-and-coming industries. Here are the most significant ones.

Lack of Insurance Services

The sale and use of ganja remain illegal in many places. That rules out the possibility of getting a business licence, not to mention accessing insurance services. Even with legalisation, access to insurance

services is an uphill task.

That's due to the federal regulations that schedule cannabis enterprises and related entities as high-risk businesses. Consequently, many insurance companies often avoid any dealings within the cannabis industry.

Some brands have opted to test the waters. However, the stringent rules and legal jargon have been a significant hindrance. They opted out, which exposes them to different liabilities. Little wonder that more businesses are turning to blockchain technology. The cannabis-blockchain integration allows secure transacting without revealing identities.

Hindrances in the Digital Marketing Space

Businesses use digital marketing to boost their brand awareness. For one, it's affordable. It's also convenient and pretty practical compared to traditional marketing strategies. Sadly, finding a footing in the world of digital marketing isn't easy for budding businesses.

Besides website design, brand presentation is another challenge facing the cannabis industry. Considering marijuana is still frowned upon in society, even with the ongoing lobbying for legalisation, content strategy and best SEO practices are other challenges barring the unexploited market from getting the much-needed exposure.

Cash Handling and Financing Challenges

Under the federal AML (Anti-Money Laundering) laws, banking services can't receive proceeds from legal and illegal marijuana businesses. That means cannabis businesses can't access bank loans. They also have to grapple with the risk of handling liquid cash.

There were, however, rays of hope with the emergence of small credit unions. Even with long queues, those would have provided an escape route.

Nonetheless, the Congress annual defence spending bill removed the Safe Banking Act. That pushed the cannabis industry a step back to the denial of banking services and the associated risks like armed robberies.

Although Congress and the world in general haven't put effort into helping with the banking challenges, all isn't lost. The weed community can find relief in recent innovative ideas within the blockchain space.

The cannabis-blockchain integration provides an ideal platform for cannabis businesses to thrive. In other words, the community can transact online and enjoy massive benefits that are often bundled with DeFi tokens, including:

- Cash-free transactions: By opting to use DeFi

tokens, the cannabis industry will effectively circumvent the need to handle cash. That'll also settle security-related challenges.

- Access to loans: DeFi tokens are unique assets since it's easy to back them using stable coins like US dollars. The cannabis community can use the window to access business expansion loans.

- Transparency: Blockchain platforms are pretty secure. They're also tamper-proof, making it easy for businesses to track specific steps in the supply chain.

- Lower transaction fees: The cannabis industry is classified as a high-risk sector. Businesses can use DeFi tokens during their everyday transactions to avoid that. So, they'll often pay higher fees if allowed to transact in traditional banks.

Beyond the no-banking services dilemma, some tokens like the REEFER tokens are designed to deliver far-reaching benefits to the cannabis community. Up next are details about this unique blockchain platform.

What is a REEFER Token?

A REEFER token is what the cannabis industry has been lacking. Its primary goal is to link the metaverse, crypto, NFTs, gaming, and cannabis. The revolution is expected to alter interactions between legal weed dispensaries, smoke and vape shops,

cannabis restaurants, lounges, and gamers.

The REEFER token is the first of its kind among the new kids in the blockchain and cannabis space. That notwithstanding, it's a reliable payment platform specifically created for the cannabis industry. Already, uptake of the token is taking ground in Florida.

Since this is a DeFi platform, third parties like government bodies can't access user information. So, identity is often protected. Furthermore, money is kept in digital wallets that offer quick, safe, secure settlements. Buying and selling of products are via REEFER token POS.

Uniquely, the REEFER token comprises a reward system. To qualify, you've got to be a loyal customer and refer friends and relatives. Once you are eligible, you're entitled to free products and massive discounts at your favourite shop. Meanwhile, the outlet enjoys increased brand awareness, a growing customer base, and higher sales. It's a win-win situation on the REEFER DeFi platform.

REEFER Token is listed on Crypto.com, the world's largest and fastest growing crypto application and index, Coinbase, the preeminent cryptocurrency platform, CoinMarketCap.com and CoinGecko.com. Currently REEFER Token is only listed on these platforms and not available to be traded. REEFER Token is currently available for sale on Pancake Swap. Check REEFER's Telegram chat here for up to the minute details on new developments for the platform and token.

How Does REEFER Solve the Challenges in the Cannabis Industry?

REEFER tokens were created to help align the cannabis stakeholders – growers, producers, manufacturers, refiners, retailers, and dispensaries. Furthermore, the platform will end the age-old friction between marijuana and CBD.

REEFER has developed a mechanism that will ensure smooth blockchain and cannabis integration to accomplish that. The platform features metaverse, crypto, NFTs, gaming, and cannabis. Consequently, REEFER is expected to deliver higher levels of value to the cannabis community.

For instance, users can make quick crypto payments

across the platform. That's excellent news for the cannabis industry. After all, legislative laws have made it difficult for ganja businesses to access banking services. The same feature opens a window for cannabis businesses to access loans.

Unlike traditional banking, REEFER is a decentralised platform. So, third parties, including government bodies, can't access user details. Online safety of users' data is assured. However, that doesn't mean REEFER supports the violation of cannabis laws and regulations. Instead, it's looking to solve various challenges in the cannabis industry.

Though quite restrictive, FinCEN guidelines provide a channel for cannabis businesses to access banking services. However, the related costs are pretty steep. That's due to recommended tight surveillance required to comply with AML laws.

It's easy for established MSOs (multistate operators) to afford the exorbitant costs. However, that's a huge barrier for small enterprises. REEFER has helped bridge the gap through blockchain technology by charging relatively low transaction fees. Consequently, even female cannabis entrepreneurs and minority-owned businesses are adequately covered.

The inclusion of NFT and gaming opportunities across the platform means added value for consumers and producers. Also known as weed wars, the cannabis community can earn legally or illegally through battling law enforcement threats and the illegal marijuana trade.

Alternatively, players can trade, breed, or sell cannabis seeds in the form of NFTs. Lastly, users can leverage the metaverse function to their advantage. The available metaverse land purchases include:

- Trap houses
- Grow houses
- Cannabis farms
- Legal cannabis dispensaries

REEFER Token Signs Exclusive Agreement with Cannabis AI Pioneer VisiCann To Be Exclusive Seed to Sale NFT Partner

REEFER Token has also recently signed an exclusive partnership agreement with VisiCann Technologies, a pioneer in artificial intelligence (AI) algorithm

technology for post-harvest cannabis & hemp. VisiCann will be REEFER Token's exclusive partner for seed to sale NFTs that will launch with growers and brands in the near future. VisiCann's ground breaking technology will provide AI backed technology ensuring accuracy and authenticity documenting exact cannabis seed and strain types.

REEFER Token founding team commented, "The REEFER Token team is very excited to enter into an exclusive partnership with VisiCann. They are a great partner for us to really solidify REEFER Token as a leader in seed to sale technology. Growers and brands will have access to the best AI technology with our NFT's incorporating VisiCann technology. This partnership with VisiCann further establishes REEFER Token's place in the cannabis industry and brings us further to our goal to be the ultimate crypto cannabis ecosystem for all stakeholders in the sector. It's very fitting that today is St Patrick's Day; we celebrate the Green growth of REEFER Token with some fine green bud that can be verified by VisiCann technology. We hope all of our members in the REEFER Token community have a GREEN day!"

Eli Duffy, CEO of VisiCann commented, "I am happy to partner with REEFER Token. I have been very impressed with their team and growth over the past few weeks since launch. Their concept is revolutionary for the cannabis space. VisiCann has been at the forefront of AI technology for hemp and cannabis industries. Partnering with REEFER Token expands our reach into the crypto industry and the cannabis leader in the space. Excited for the future to come!" Eli Duffy has had a successful track record in the tech space. His companies have won technology awards from prestigious universities, including VisiCann, which has a working relationship with many of Israel's top research institutions. VisiCann is based out of Tel Aviv-Yafo.

REEFER Token's First Virtual THC Dispensary

REEFER Token last week struck a deal with Kandy Girl and its virtual THC dispensary in Decentraland that REEFER Token holders receive a 50% discount on any products purchased at either location using the discount code REEFERARMY. Kandy Girl joins the American Cannabis Society in Madison, WI, Collins Vape and Tobacco, and its 4 other shops in the Miami-Dade area accepting REEFER Token.

Discussions are currently underway with a number of other dispensaries, vape shops, and other outlets to accept REEFER Token.

How Does the REEFER Ecosystem Work?

The REEFER ecosystem is all about using blockchain technology to provide solutions to the challenges being faced by the cannabis industry. The functions include the metaverse, where users can own farms, houses and cannabis dispensaries, NFTS, and gaming, which deliver additional value. Furthermore, the ecosystem allows for online transactions across a safe and secure REEFER Point of Sale System.

Conclusion

According to research, cannabis has been proven to be an effective solution to many health problems. Although the fantastic plant is an excellent option for conventional drugs, uptake of these truths is slow across the globe.

Activists continue to fight for the legalisation of ganja. The battle is bearing fruit as more countries are legalising medicinal CBD. Recreational use remains illegal in many parts of the world.

Legalisation hasn't dealt with some challenges in the cannabis industry. Businesses are still struggling to access banking services. Without access to banks, the multi-million cannabis industry is grappling with handling cash and a lack of financing from traditional banking businesses.

However, innovation has helped to integrate cannabis and blockchain technology. That has helped deal with the challenge of accessing banking services. Put differently, the cannabis community can rely on blockchain to buy, sell, and even access business expansion loans across DeFi platforms.

Furthermore, some new entrants like the REEFER tokens provide additional benefits. Aside from accessing online banking services, loyal customers enjoy rewards in the form of discounts and free products from approved outlets.

More value comes with adopting the metaverse, NFTs, and gaming into the REEFER ecosystem. That said, users are free to invest and earn big within the REEFER platform.

Sign up for the maxxer pre-sale!

Don't miss out on securing \$MXXR tokens at this discount before public sale launches, **get a 25% discount now!**

- Discounted trading fees using \$MXXR
- Crypto based social trading platform
- Regulated and secure
- User-friendly

Trade at a discount

When you use the MXXR token to pay for trading commissions, you get a 50% discount. When actually making a trade, you can directly see how the fees and spread influences your trade.

Charity donating

At maxxer we are dedicated to helping make the world a better place, and as such 2% of all transaction fees will be donated in our \$MXXR charity pool.

Each quarter the charity pool will be distributed with people able to directly donate additional \$MXXR tokens in order to vote proportionally on where that money goes, receiving a receipt for their donation and maxxer rewards as an added bonus! All donations will be made in the name of the donors.

Raffles

1% of all transaction fees paid with the \$MXXR token will be put into a lottery fund with one \$MXXR token equaling one raffle ticket, giving users of the maxxer exchange even more reason to not just buy, but hold \$MXXR as well.

Tipping content creators

By creating your own space for social content we will let you support those that provide genuinely good and useful content by tipping them. This removes the need for influencers to turn to external sources of income and actually punishes them for it as people will only want to reward those who give out good advice.

what is maxxer?

maxxer is the first centralised and regulated digital asset exchange that focuses and rewards a communal and social trading system. We are making crypto investing and trading accessible and simple; guiding both new and experienced investors through the ever-changing cryptocurrency markets in your own maxxer community.

Social trading

Gamification

Watch, Read, Share

Liquidity

maxxer will enhance liquidity by settling the exchange of members' assets within the internal exchange and effectively combining the aggregated liquidity across public exchanges. We will use 35% of the IEO proceeds to facilitate market making partners and our own marketmaker to deliver narrow spreads and a deep liquid order book at a fair price versus other global exchanges.

- Using market makers that are marketmaking over 50 exchanges globally.
- Using our own marketmaking and inter-exchange arbitrage bot.

Security

We have developed a multilayered security system that is capable of both containing and neutralizing attack attempts in a timely manner with the need for as little human intervention as possible.

We also make use of state of the art solutions for multi signature and redundancy in every step of the way when it comes to cryptocurrency transfers, even in hot wallets which are directly connected to our system.

Rapidly changing regulations

maxxer is compliant by design and intends to fully comply with all

regulatory aspects in all the regions it will operate.

maxxer engages with the best-in-class lawyers and consulting firms to ensure that we are fully compliant with the current regulations and a step ahead for the coming MICA (Markets in Crypto Assets) regulation.

Binance Informs Canadian Regulator It's 'Committed' to Ceasing Crypto Trading Services in Ontario

Cryptocurrency exchange Binance has informed the Ontario Securities Commission (OSC) that it is committed to ceasing opening new accounts for Ontario residents and winding down certain services to comply with regulations.

Binance Promises to Increase Efforts to Comply With Regulation
Cryptocurrency exchange Binance sent a letter to the Ontario Securities Commission (OSC) Wednesday.

In the letter, Binance listed a few commitments to the OSC, including “ceasing opening new Ontario accounts,” “ceasing trading in existing Ontario accounts, with exceptions to protect investors, along with

winding down its businesses in certain products,” and “providing fee waivers and offering fee reimbursement to certain Ontario users.”

In addition, Binance will also make reports to OSC staff and retain an independent third party to ensure the effectiveness of its efforts to implement its commitments.

Binance decided to withdraw its services from Ontario in June 2021. The exchange told Ontario users in the same month that they will need to close all active positions by Dec. 31, 2021.

Binance detailed in its letter that on Dec. 31 last year

Former Congressman Ron Paul Says Crypto Should Be Permitted, but History Suggests Government Ban Possible

Former Texas congressman Ron Paul says that if history is any indication, the government could still clamp down hard on the crypto markets.

In a new interview on Kitco News, Paul says that there could be a repeat of 1934 when the Gold Reserve Act prohibited Americans

from holding and trading the precious metal, but this time targeting crypto.

“I am influenced a whole lot about history and the gold history and my interest in studying money and some of the principles that Austrian economics teaches about what the nature of money should be, but that

doesn't sway me from arguing the case for those who know about crypto, understand it better than I do that it should be obviously permitted.”

Paul says in general, he's surprised that many in the crypto industry are adamant about getting regulato-

ry clarity from authorities. He says it's almost the opposite mentality that gold enthusiasts used to have decades ago.

“About five years ago or something, I was at a conference... Somebody was very interested in regulation.
