# EDITORS

*BitMEX CEO Arthur Hayes said in a blog post that the 10-day correlation between Bitcoin and the Nasdaq 100 Index (NDX) remains high. That means if the Nasdaq enters a meltdown, falling 30% to 50%, then the crypto markets are unlikely to be spared. He expects Bitcoin to plummet to \$30,000 and Ether to drop to \$2,500 by June of this year.*

*Although the near-term price action favours the bears, whales remain bullish for the long term. At the recently concluded Bitcoin 2022 conference in Miami, ARK Invest CEO Cathie Wood reiterated her call for Bitcoin to reach \$1 million by 2030. She expects about two and a half percent of institutional assets to be allocated to Bitcoin in the next eight years.*

# LETTER

We cautioned traders in our previous analysis that a break below \$44,000 could sink Bitcoin to the 50-day simple moving average (SMA) and that is what happened. The BTC/USD pair turned down sharply on April 6 and reached the 50-day SMA on April 8.

Although the bulls defended the 50-day SMA from April 8 to April 10, the failure to achieve a strong bounce off it attracted further selling by the bears. The pair plunged below the 50-day SMA on April 11 and broke the psychological support at \$40,000.

If the price sustains below \$40,000, the next stop could be the strong support at \$37,000. The buyers are likely to defend this level aggressively. If they succeed, the pair could remain stuck inside a large range between \$37,000 and the 200-day SMA for a few days.

Alternatively, if the price turns up from the current level, the buyers will try to push the pair above the 50-day SMA. If that happens, it could signal the formation of a higher low, which may be a bullish sign.

Lastly please check out the advancement's happening in the cryptocurrency world.

Enjoy the issue!

# WEEKLY CRYPTOCURRENCY MARKET ANALYSIS

Hello, welcome to this week's 229th edition of Cryptonaire Weekly Magazine. The global crypto market cap is \$1.86 Trillion, down \$310 billion since the last week. The total crypto market trading volume over the last 24 hours has increased by 47.90% to \$103.73 Billion. The DeFi volume is \$12.81 Billion, 12.35% of the entire crypto market's 24-hour trading volume. The volume of all stable coins is \$87.95 Billion, 84.79% of the total crypto market's 24-hour trading volume.

Bitcoin's price has decreased 14.38% from \$46,775 last week to around \$40,050 and Ether's price has decreased by 14.33% from \$3,525 last week to \$3,020. Bitcoin's market cap is \$764 Billion and the altcoin market cap is \$1.09 Trillion.

The rising Treasury yields pulled the risky assets such as Bitcoin and the U.S. equity markets lower on April 11 as investors sought to curtail risk. Bitcoin plunged below \$40,000 for the first time since March 16 and the altcoins also suffered huge losses. The investors are concerned that aggressive tightening by the U.S. Federal Reserve to tame inflation could slow down the economy.

BitMEX CEO Arthur Hayes said in a blog post that the 10-day correlation between Bitcoin and the Nasdaq 100 Index (NDX) remains high. That means if the Nasdaq enters a meltdown, falling 30% to 50%, then the crypto markets are unlikely to be spared. He expects Bitcoin to plummet to \$30,000 and Ether to drop to \$2,500 by June of this year.

Although the near-term price action favours the bears, whales remain bullish for the long term. At the recently concluded Bitcoin 2022 conference in Miami, ARK Invest CEO Cathie Wood reiterated her call for Bitcoin to reach \$1 million by 2030. She expects about two and a half percent of institutional assets to be allocated to Bitcoin in the next eight years.

During the conference, billionaire Ricardo Salinas Pliego disclosed that his liquid portfolio is made up of

“60% in bitcoin and bitcoin equities and then 40% in hard-asset stock like oil and gas and gold miners.”

Back in November 2020, Salinas had revealed a 10% exposure to Bitcoin in his liquid assets portfolio. The huge increase in Bitcoin exposure in the past year-and-a-half shows high conviction in the future of Bitcoin.

Although large investors are bullish for the long term, retail traders should also keep the short-term trend in mind before allocating fresh money. It is always better to buy after a bottom is confirmed rather than attempt to catch a falling knife.

## Percentage of Total Market Capitalization (Dominance)

Bitcoin	41.09%
Ethereum	19.54%
Tether	4.46%
BNB	3.61%

# To create a safe space for the blockchain community

AVAILABLE SOON

## Solidray Token

The opportunities are limitless.

### Privacy

Solidray's DEX will not store users' funds and data. Since the exchange doesn't have a single repository to access all funds, it is nearly impossible to hack it. This minimizes the risks of third parties gaining access to your assets.

### No KYC/AML or ID Verification

Decentralized exchanges are not governed by a central authority; as a result, there are typically no registration requirements to use the platform. Solidray's decentralized exchange users can easily and securely access a DEX without needing to create an on-exchange account, undergo identity verification, or provide personal information.

### Zero regulatory involvement

With solidray's DEX, it is almost impossible for regulators to close our DEX, thanks to the use of distributed ledger technology, where each node in the blockchain operates independently of the others.

### All Tokens Can be Traded

With Solidray's DEX, our users can trade cryptocurrencies that previously were difficult to exchange elsewhere, either on a DEX or a DApp (decentralized application) built in conjunction.

## Our First Utility

SolidSocial is a Web 3.0 Social Media Platform under the Solidray ecosystem with the aim of creating a safe space for blockchain users to explore, network, build and grow communities. Our functionalities which are specially curated to cater for all Blockchain needs includes but not limited to news, research, education, community building and networking. We support the inclusion of other professional niches to increase partnership and collaboration amongst our users.

Our social messaging platform is bridging the gap between blockchain technology and mainstream social media by allowing users to explore and connect fully with friends and family.

Solidsocial will provide various Blockchain related advertisement opportunities. Users who are interested in reaching a wider audience within the blockchain community will be able to use our platform using online advertising and marketing. Solidsocial lite version is fully active and currently used by over 12,000 users.

Solidsocial is a UK-Based registered company with Reg no 13989359

## Ecosystem

Our ecosystem includes six (6) unique features which will be introduced expressly to our community

- Decentralized**  
Solidray is a decentralized crypto platform that aims to provide a safe space for every member of the crypto community
- Networking**  
Our social media platform which drives, networking and engagement among crypto enthusiasts.
- Safe and Private**  
The safety of your digital asset is a priority for Solidray, and we will ensure this through our Defi wallet (Raywallet)

# CRYPTO TRADE OPPORTUNITIES

## BITCOIN - BTC/USD

We cautioned traders in our previous analysis that a break below \$44,000 could sink Bitcoin to the 50-day simple moving average (SMA) and that is what happened. The BTC/USD pair turned down sharply on April 6 and reached the 50-day SMA on April 8.

Although the bulls defended the 50-day SMA from

April 8 to April 10, the failure to achieve a strong bounce off it attracted further selling by the bears. The pair plunged below the 50-day SMA on April 11 and broke the psychological support at \$40,000.

If the price sustains below \$40,000, the next stop could be the strong support at \$37,000. The buyers are likely to defend this level aggressively. If they succeed, the pair could remain stuck inside a large range between \$37,000 and the 200-day SMA for a few days.

Alternatively, if the price turns up from the current level, the buyers will try to push the pair above the 50-day SMA. If that happens, it could signal the formation of a higher low, which may be a bullish sign.

[Previous Analysis...](#)

## ETHEREUM - ETH/USD

We said in our previous analysis that Ether's failure to pick up momentum following a break above the 200-day SMA looked like a bull trap and that is what it turned out to be.

The ETH/USD pair broke below the support at

\$3,284.75 on April 6 and the bears thwarted attempts by the bulls to reclaim the level. The selling resumed on April 11 and the pair dropped to the 50-day SMA.

This is an important level for the bulls to defend because if it cracks, the next stop could be \$2,800 and thereafter \$2,450. The relative strength index (RSI) in the negative territory indicates that the momentum favours the bears.

Contrary to this assumption, if the price rebounds off the 50-day SMA with strength, it will suggest that the bulls are aggressively buying the dips to this level. That could keep the pair range-bound between the two moving averages for the next few days.

[Previous Analysis...](#)

## BINANCE - BNB/USD

We anticipated the bulls to encounter strong resistance near the 200-day SMA and that is what happened.

The failure to push the price above the 200-day SMA

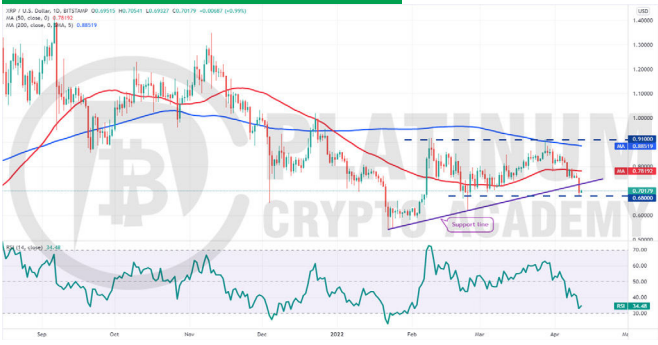

may have tempted short-term traders to book profits. That pulled the price below the 50-day SMA on April 11.

The bulls are attempting to push the price back above the 50-day SMA and trap the aggressive bears. If they manage to sustain the price above the 50-day SMA, the BNB/USD pair could consolidate between the moving averages for a few more days.

However, if the recovery fails to sustain above the 50-day SMA, it will suggest that traders are selling on rallies. A break and close below \$384.80 could accelerate selling and the pair may drop to the strong support at \$349.

[Previous Analysis...](#)

## RIPPLE - XRP/USD

XRP plummeted below the 50-day SMA on April 6, indicating that short-term traders may have been rushing to the exit. The buyers tried to push the price above the 50-day SMA on April 7 and 8 but failed.

This renewed selling and the XRP/USD pair broke below the support line on April 11. The RSI has dropped below 35, indicating that bears have the upper hand.

There is a minor support at \$0.68 but if this level cracks, the selling could pick up momentum and the pair could drop to the \$0.58 to \$0.60 support zone.

Any recovery attempt is likely to face strong resistance at the support line and then again at the 50-day SMA.

The buyers will have to push and sustain the price above the 50-day SMA to indicate that the correction may be over. The pair could then remain range-bound between \$0.68 and \$0.91 for a few days.

[Previous Analysis...](#)

## LUNA - LUNA/USD

Although Terra's LUNA token was in an uptrend, we gave it a low probability of rallying to higher levels of \$150. And our assumption in the previous analysis proved to be correct.

The LUNA/USD pair turned down from \$119.44 on April 5 and broke below the breakout level of \$103.50 on

April 7. The failure to hold on to this level may have attracted profit-booking by the short-term bulls and selling by the aggressive bears.

The selling intensified on April 8 and the pair broke below the uptrend line. Efforts by the bulls to push the price back above this level failed on April 9, which renewed selling. The pair continued its downward move and broke below the 50-day SMA on April 11.

If the price sustains below the 50-day SMA, the possibility of a drop to the next strong support at \$75 increases. If this level also cracks, the next stop could be the critical support at the 200-day SMA.

On the upside, the bears are likely to defend the 50-day SMA and the \$103.50 level with vigour.

# Charity Token

A Revolutionary New Application for Distributing Charitable Contributions

LAUNCHING JULY 1<sup>ST</sup>

♥ Read Whitepaper

## How it works

### Create an account

Just a few simple steps until you have your very own Charity Token Wallet

### Get Verified

Charities require a strict verification process before being offered a profile in our library

Get verified and receive Charity Tokens for **FREE!**

### Enjoy the app

You are now free to fund your wallet and use any of the DeFi services on our Platform

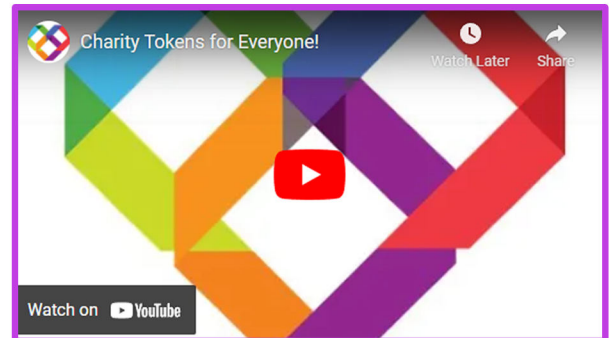

## The Charity Token Smart Contract

Please note that the following conditions are enforced by the smart contract and cannot be changed:

Charity is issued fairly and autonomously distributed by our smart contracts, while Charity Token Pty Ltd can dynamically change the values of the transaction percentages, we cannot change the function of money movement. This is permanent.

Auto staking app. participants only receive rewards from the "Charity for All" The Charity for all is NOW paid 6.5% with 2% of this Paid Wqually and the 4.5% PROPORTIONALLY.

Token holders are rewarded from the transaction split that takes place via the smart contract during EVERY transaction on the network.

In order to ensure a high level of EQUALITY during distribution, we incentivize larger Investors to hold tokens with a higher ROI paid "Proportionally" and the lower amount shared "Equally".

Charities

# NFT MARKET SUMMARY

## Introduction

The Russia-Ukraine conflict has been dominating global news and headlines for over a month now. Therefore, it is no surprise that it has begun to have its impact in the crypto and NFT world too. We have seen some NFT projects coming up in the last few weeks with plans to raise funds and help Ukrainians in distress.

Now, there is a new NFT collection that will not only raise and donate funds to people suffering from the hostilities but the core theme of the NFT project itself is the Russia-Ukraine war, where you can participate, albeit digitally, and be a part of world history.

Meanwhile, as the realms of NFT and crypto evolve over time, there are developments which compel enthusiasts to be more and careful. One such incident happened recently when NFT worth over US \$350,000 was sold for a mere US \$115.

Although the exact reason behind the flawed sale is not clear yet, the issue emphasizes the need for more diligence and security in the fledgling sector. Read on to find more about both the stories.

## Ukraine-Russia NFT

With the war in Ukraine raging on, a new NFT project is being launched on the same war theme by a team of caring people from different countries with the aim of raising funds and help people who were suffering from the hostilities. The team behind the project claims it to be a charitable project with a mission to help civilians survive this difficult period of world history.

In fact, half of the funds raised will be sent to charitable organizations which are involved in the supply of humanitarian assistance to civilians affected by the war. Among the charitable organizations already identified by the team are the International Committee of Red Cross (ICRC) and Voices of Children.

In terms of the project's features, all the data is stored on the blockchain and you can arrange a battle between your NFT and increase the power of the token. A total of 20,000 tokens will be issued, which are equally split between Russian and

Ukrainian troops. The tokens will be issued in waves of 1,000 pieces and each subsequent wave will cost more than the previous one.

The logic that will be followed is that due to the struggle, the number of tokens will decrease and the power or value of the available tokens will increase. NFT enthusiasts are advised to follow the social media channels of the project for timely updates and giveaways

## Bored Ape NFT worth \$350,000 was sold for \$115 by mistake instead of 115 ETH

One of the world's most famous and valuable NFT in terms of market capitalization, the Bored Ape Yacht Club (BAYC) has come into the news for wrong reasons and, this time, for no fault of its developers. One of its holders seem to have sold a US \$350,000 Bored Ape NFT for just US \$115 in what appears to be either a regrettable mistake or a hack.

The sale, which occurred on the NFT marketplace OpenSea, has become controversial because the floor price is the lowest of any NFT within a collection of Bored Ape NFT, that is currently sold at 106 ETH or US \$360.56 based on current prices.

The owner of BAYC NFT #835 accepted a price of 115 DAI or around US \$115 for the NFT. DAI is a stablecoin which runs on the Ethereum network and is tied to the US dollar. The offer is 99.9% lower than the NFT collection's current floor price. Incidentally, a Mutant Ape #11670 was sold by the same owner to the same buyer for just US \$25.

Experts feel the issue is most likely the result of an error on the part of the original owner, who mistook DAI as ETH. With the current price of a single ETH

hovering around US \$3,000, the owner would have received around US \$394,000, if the BAYC NFT had sold for the same price in ETH. This anomaly is also leading to fears that the account of the vendor was possibly hacked.

The BAYC collection contains 10,000 special NFT that were generated using algorithms from over 172 possible traits that determine the rarity of each Ape. The rarer the traits of an Ape image, the more valuable the NFT.

The total value of BAYC trading on the OpenSea marketplace was over 466,000 ETH or around US \$1.4 billion, as per data collected in March. Apart from their extensive use as profile pictures on social media, the BAYC collection is notable for its versatility. For instance, an exclusive admission to the Yacht Club, a members-only retail store and an exclusive Discord server are all included in the BAYC collection and additional NFT such as a free Bored Ape Kennel Club, are available to BAYC holders.

### Metis Farmer NFT

Metis Farmer NFT is a collection of 10,000 unique and rare NFT and is part of the metaverse called Metis Farm Metaverse. The NFTs consist of 100 unique and rare traits with a few of them having 1:1 rarity ratio.

The first Metis Farmer NFT consists of the Genesis collection which has 3,000 NFT and are like the founding figures of the first generation NFT. They are unique, rare and are of greater value. The non-Genesis ones has around 7,000 NFT, thereby making a total of 10,000 NFT.

The project or the collection has some interesting utilities including Genesis Mining and Island Airdrops. Genesis mining is essentially the first utility given to

genesis holders of the NFT project and holders are able to mine Governance tokens. They are able to stake their Genesis NFT and will be rewarded with \$WHEAT token, which is the project's official Governance token.

With a maximum of 10 NFT that can be staked, each NFT will have so much Farm power. All holders will have their NFT with 10 Farm power and the more the NFT they have, the greater will be the Farm

power and also the rewards.

As for the Island Airdrops, it is a cool concept where an NFT holder can plant, harvest, craft and mine resources. It is more like a game where you can earn rewards and you can sell your game resources for the game's tokens.

As the project is just taking off, more utilities are set to come in the project and holders are given early access to the utilities to experience them first hand. The Metis Farmer NFT are going to be airdropped on April 13th, 2022.

### Atlantic Voyage Ape Club NFT

The Atlantic Voyage Ape Club (AVAC) NFT is a collection of 3,300 Titanic-themed Ape NFT, living on the Ethereum blockchain network. Apart from the uniqueness of each NFT, the other unique feature of the project is that you can only mint AVAC NFT through their own website and the developers claim on their social media channels that their NFT available elsewhere, including possible availability on NFT marketplace OpenSea is a "scam".

The pre-sale begins on April 9th, 2022 and the launch or the mint date is scheduled on the next day. The launch date of April 10th was chosen because it was the day the Titanic set sail on her maiden voyage. The cost of each AVAC NFT is 0.07 ETH. All the AVAC NFT will be revealed on April 13th, when holders can meet their Apes.

In terms of their roadmap, the project plans to create a Titanic in the metaverse and give all AVAC NFT holders a room or a Stateroom aboard the ship. In the meantime, when the project reaches 40% of its sales, the team plans to make a sizeable donation to The Ocean Cleanup.

### Conclusion

The flawed sale of Bored Ape NFT for a tiny fraction of its actual market price brings to the fore the potential risks associated with such digital products while the Russia-Ukraine NFT project highlights the blurring of real-world concerns and issues and projects in the digital world.

There is another development that is just about emerging in the space and that is some NFT projects are bypassing the NFT marketplaces and allowing their NFT to be minted only through their own websites. If more and more NFT projects begin to do the same, then it would be a development to watch out for. Overall, all the above developments highlight that there is a long way to go for the nascent NFT sector. Hope you enjoyed reading it. Thank you.

# PRESS RELEASE

## MINTABLE TO RETURN NFT STOLEN IN OPENSEA EXPLOIT

In a move that is seen as philanthropic by some and exploitation of a self-branding opportunity by others, NFT marketplace Mintable has purchased three NFTs of popular collection Azuki and plans to return them to their original owners. Mintable purchased it on rapidly emerging competitor platform LooksRare for 0.2 Ethereum, much below the floor price of Azuki at 11.79 Ethereum or around US \$32,155.

### The Context

Last weekend, popular NFT marketplace OpenSea rolled out an upgrade to its smart contract, as a proactive measure to weed out inactive listings from its platform. As per the planned upgrade, users were asked to migrate their NFT listings – hosted on the Ethereum blockchain network – to the new smart contract.

Zach Burks  
@ZachSpaded

This weekend when buying azukis for our fire sale (selling below floor for free profit to users) we discovered some of the stolen @AzukiZen from the opensea hackb...

We decided to buy them and give them back to who they were stolen from. Here's what happened

1/1

Mintable @mintable\_app

Mintable Recovers @AzukiZen NFTs Stolen in @OpenSea Exploit  
finance.yahoo.com/news/mintable-... via @Yahoo

11:10 AM · Feb 23, 2022

The three were part of the NFTs equivalent to US \$1.7 million worth of Ethereum that were stolen in a targeted email phishing attack last weekend. The Azuki project has 10,000 avatars and is centered around cultivating an inclusive Metaverse community.

OpenSea said in an announcement that, with this step, NFT listings created before February 18, 2022 would have automatically expired within the subsequent week. Users, however, would be able to relist the delisted NFTs over to the new smart contract. Upon successful listings using the new smart contract, the NFTs will show the original date of posting.

However, in the hours that followed, 32 users of the platform became victims of targeted email phishing attack that resulted in an anonymous entity stealing US \$1.7 million worth of Ethereum.

OpenSea clarified in subsequent tweets that the breach was orchestrated via fake email scams and none of the malicious orders were executed against the new smart contract, indicating that it would unlikely affect the migration flow to OpenSea's new smart contract.

Meanwhile, Mintable founder and CEO Zach Burks criticized OpenSea's lack of proper response to the exploit and lamented that OpenSea could not spend some money to help its users despite making over a billion dollars in the past year.

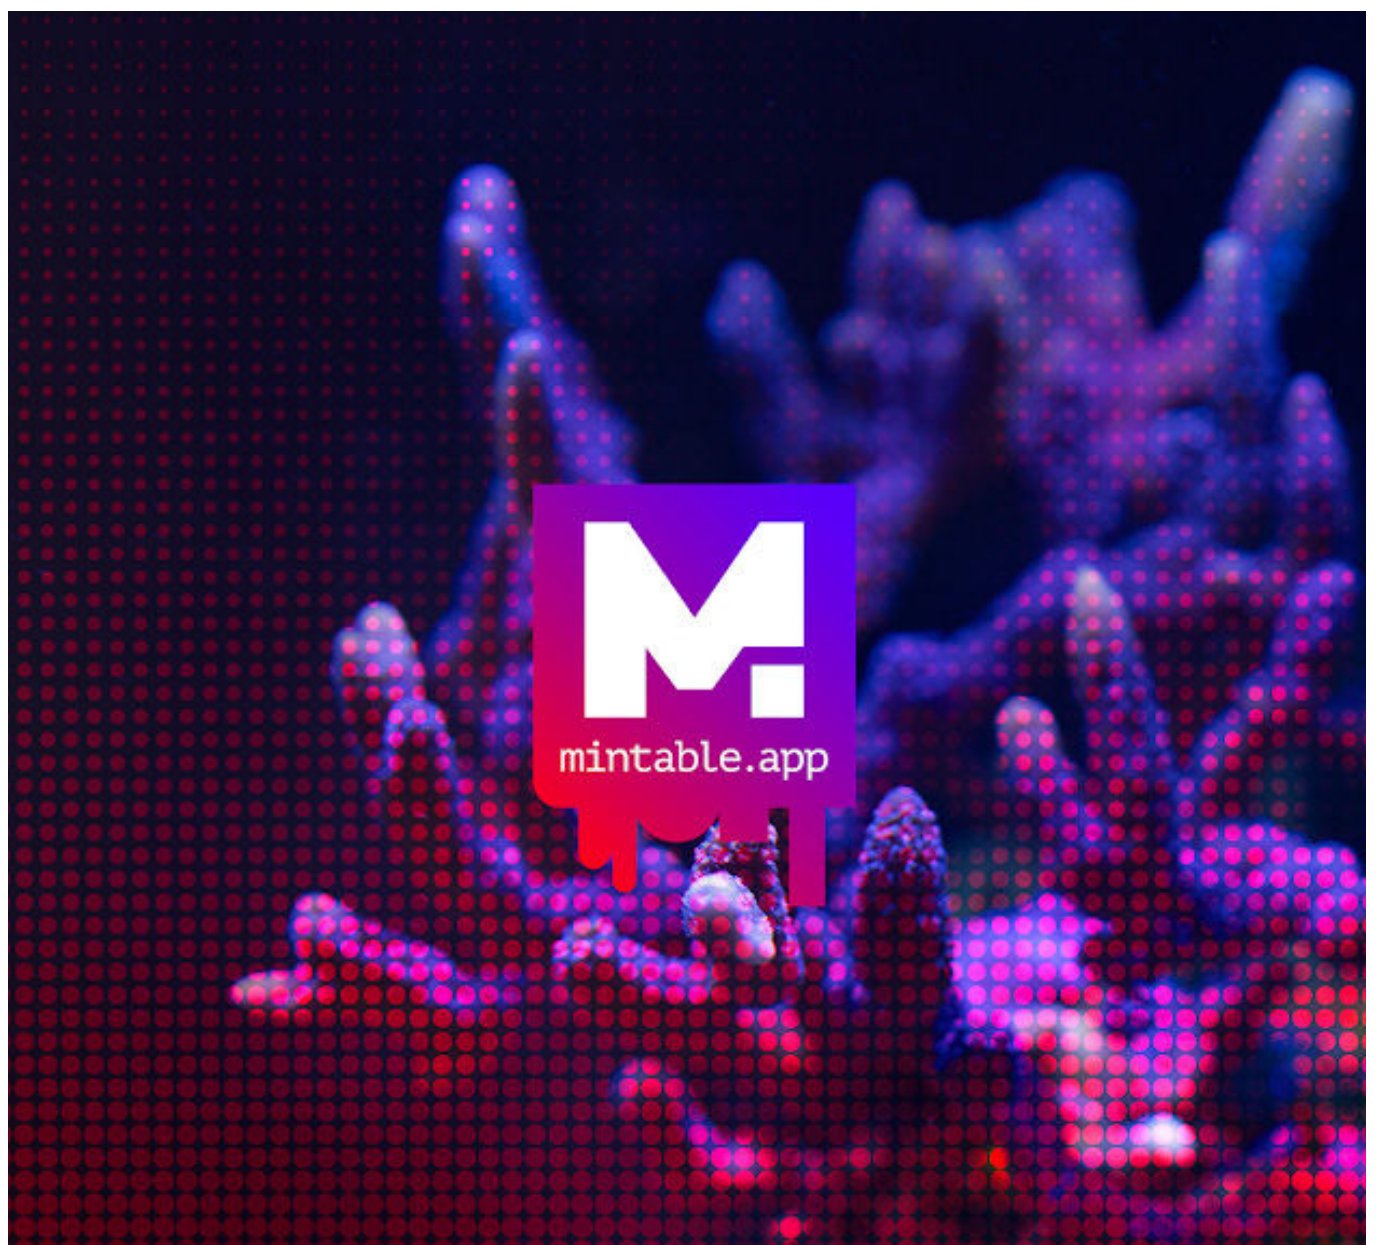

He also said Mintable was working with the Azuki team and the project manager Demna to find a proper solution for the holders, with the NFTs expected to be returned to their rightful owners within the next few days.

Mintable has already identified at least one of the suspected victims of the email phishing scam and the concerned person was verifying their wallet with Mintable to enable the latter to send back the NFT to them.

Incidentally, Burks also highlighted the importance of NFT marketplaces such as OpenSea, Mintable, Rarible, LooksRare, among others, to uphold a level of self-accountability, especially for security related activities on the platforms.

The latter assumes even more significance because it is still an industry that lacks any kind of proper regulatory framework at the moment. In such circumstances, gestures like Mintable returning the NFT to their rightful owners may go a long way in promoting fairness and honesty in the Web3 world.

He also warned that if any NFT marketplace platform was making money from its users but is unable to protect its users, they would simply have no users eventually.

# ERNEST COMICS: INTRODUCING THE WORLD'S BEST COMIC NFTS!

NFT  
NON-FUNGIBLE TOKEN

## Introduction of Crypto NFTs

Crypto NFTs are digital representations of physical assets built on a blockchain network, and they cannot be duplicated. Non-fungible tokens feature metadata and identification codes that set them apart. The difference in the value of each NFT makes it impossible to exchange or trade them equally. Thus, they are different from cryptocurrencies that can be used for commercial transactions since they are identical and carry an equal worth. These non-fungibles are built in a manner that a single NFT can have several use cases.

Crypto NFTs are extensible, and they can be combined to produce another unique NFT. Like cryptocurrencies, NFTs also have ownership details, making it easy for token holders to transfer and identify. Its owners can add attributes and metadata about the physical asset on the NFTs.

Non-fungible tokens are an evolution of the ERC-721 standards, and they are beneficial in establishing market efficiency since they streamline several processes and eradicate third parties and agents. This way, artists can connect directly with their audiences without intermediaries. They can also be used for identity management, creating new markets and methods of investment, among others.

If you aim to invest in NFTs, it is important to have crypto stored in a crypto wallet. Also, you can buy crypto NFTs through any of the NFT marketplace, such as Rarible, OpenSea and SuperRare. Notably, non-fungible tokens are secure, but they are not immune from hackers.

## How Does Cryptocurrency Influence Comics' Evolution?

Cryptocurrency has greatly impacted the evolution of comics. Comics have evolved tremendously in the past years since they could utilise the blockchain network. For this reason, comics can reach and interact with their consumers without involving third parties or intermediaries. Comics built on the blockchain system are secure, and it is close to impossible to hack them. Crypto NFTs enable comics to bear a feature of ownership, considering that the owners can include their details on them, which make it easy to track their various processes ranging from their production to marketing.

Digital assets have enabled comics to be tradable and exchangeable. Thus, comic artists can trade and exchange their comic artwork for cryptocurrencies like Bitcoin, Solana, or even Ethereum. The comics differ in value, and they cannot replace each other. Cryptocurrency led to the evolution of NFTs, which is the digital representation of artworks and real estate. A comic is one of the assets that non-

fungible tokens can represent. Other properties include game items such as digital and non-digital collectables, avatars, domain names and event tickets.

Additionally, Crypto NFTs can democratise investing by fractionalising comics. Digital comics can have several owners, each responsible for a fraction of the comic, thus increasing their worth and revenue. When a comic is represented by crypto NFT, they become irreplaceable since the value of one comic does not equal another.

Crypto has influenced the comic industry by establishing an efficient market where other individuals can interact with them and streamline their entire process.

## What Are Ernest Comics?

Ernest comics are animated aliens from space and other galaxies. Ernest comics feature Ernest in disguise, a quirky alien, an extraterrestrial, coming from the Cryzal Galaxy, who is said to have discovered connection and love during his exploration on Earth. Ernest set out to share the exquisite experience with other individuals during the festive season. The Ernest animated comic series is exceptional, and it was designed by the well-known Marvel and DC Comics artist Carlos Dattoli.

Ernest is characterised by intelligence, creativity and curiosity, and has gained a massive following on social media spaces such as Discord and Instagram. This character continues to gain more fans around the world.

**PLATINUM CRYPTO ACADEMY** **ERNEST NFT** **CRYPTONAIRE WEEKLY CRYPTO INVESTMENT JOURNAL**

### 1 STAKING

- Where to Stake? Cyber Frogs website - Ernest NFT to be staked here
- What are the Rewards? 3 EVO tokens per day per Ernest
- Where will your Staked NFTs be? Non-escrow Staking System – All NFTs will remain in your Phantom Wallet and can be still used on-chain

### 2 METAVERSE INTEGRATED

- Current Metaverse Integrations: Integrated with Sovana Metaverse
- Future Integration Plans: Further Development on your own Comic club house, showroom, and marketplace.

### 3 PASSIVE INCOME OPPORTUNITIES

- Earn passive income if you own the original Ernest NFT Collection
- Earn 40% revenue share from their expansion brand & Ernest:
  - Comics through:
    - The monthly production of comics
    - Characters
    - Vehicles
    - Accessories
    - Trading cards
- Get Rewards worth US \$15-20  
Earn rewards per Ernest per month for Ernest NFT holders.

**CRYPTONAIRE WEEKLY CRYPTO INVESTMENT JOURNAL** **ERNEST IN DISGUISE** **PLATINUM CRYPTO ACADEMY**

Ernest in Disguise released the annual Halloween collection inspired by the best Halloween costumes, characters and movies on 28th November, 2021. The disguises are all one of a kind, with rarest based on the most popular Halloween figures such as Venom, Chucky, and Jason Voorhees.

### **Any Overview on Ernest Comics NFTs**

The Ernest comics NFT aims to demonstrate the evolution of NFT space to make it community-oriented. It is a collection of NFTs that feature 6,000 unique designs, and they are developed on the Solana blockchain. Its developers chose Solana since it has been one of the fastest-growing blockchains. Also, Sol will be one of the prominent cryptos in the future. Projects leveraging the Solana blockchain find it convenient and affordable since there is virtually no cost of gas fees. The Ernest comics brand has the objective of using non-fungible tokens to link individuals worldwide.

These NFTs will allow holders to own planets, stars and other forms of assets in space.

Ernest investors have a maximised opportunity of minting Legendary Non-Fungible tokens during the season of stealth launch. The revenues from the launch will also benefit the individuals behind the project in several areas, such as receiving community rewards, creating their launchpad, buying and building land in the metaverse, comic, and general marketing efforts to spread the story of Ernest around the globe.

Holding Ernest will enable you to access its future metaverse clubhouse, future mints, free drops, among others. In case you need to know your NFTs, you can view them on your phantom wallet or Magic Eden and Alpha Art.

Additionally, there will be the availability of royalties of 8%. However, 90% of the royalties will be invested back into the Ernest in Disguise projects and the secondary markets for the first three months. This way, individuals will gain profits, and the community will continue to develop.

Ernest comics' mission is to establish community engagement; it aims to create job opportunities for every individual involved in the journey to

benefit financially and educationally. For instance, the comics merchandise has been sourced from an individual within the community.

### **Ernest Comics Roadmap Explained**

The Ernest comics roadmap spreads out over four phases.

The first quarter features stealth launches that are utilised to generate income reinvested in the community's long-term projects. The launch will give the holders a chance to own The Legendary NFTs will come with a 0.5% stake in this collection and their following collections in the future. The Ernest holders will be able to use their NFTs from this point forward, and they may even have a chance to have their own tailored Ernest NFTs included in a complete comic book. The best thing about the Ernest community is that after selling out half of their supply, they will launch a limited-edition merchandise line. The merch line will allow 10% of the minters to gain access to their personalised merchandise. The holders are expecting a mysterious airdrop tasked with delivering a spacecraft at an unannounced point after the mint. The first quarter will also involve developing the storyboard for the comic.

The second quarter is characterized by a public mint and development of a launchpad. This quarter is where the team intends to have the final launch of Ernest Beyond. Ernest in Disguise' will commence fitting the space theme, and it will aim to integrate "space launch pad" into its utility and metaverse projects. In this quarter the team will also produce Ernest in Disguise Trading guides and it is when we expect to officially launch Ernest Comics. The project will also initiate Ernest In Disguise staking at this stage.

In the third quarter, Ernest comics will complete its launchpad integration. They will also officially start printing of Ernest Comics at this stage. The team will also be actively involved in releasing multiple Play to earn trading card games. We expect that the P2E trading card games whitepaper should be drafted and ready at this time. We will also have Ernest in Disguise Season 2 at this time.

The final quarter will entail a Comic-con meetup and possible release of Ernest in Disguise Season 2. Comic-Con experience is among the importance of

owning Legendary Non-Fungible Tokens; however, investors should hang tight because more benefits are in the works. In the fourth quarter, all the holders and the Ernest team will come together at the Comic-Con, in which they will have their accommodation taken care of. It's pretty likely the Legendary NFT will play an integral role in the Ernest animated comic series.

### Presale and Public Sale

There is an upcoming presale that is scheduled to start on the 16th of April and public sale that will start on the 17th of April. Participants will need to get whitelisted and also have a phantom wallet. Registration for whitelisting is currently going on at [ernestcomics.com](https://ernestcomics.com)

### Conclusion

Crypto NFTs have established direct engagements

between the artists and their audience by eliminating third parties. Cryptocurrency investing has proved secure over the past years since the technology is built on the blockchain network. The crypto NFTs enable individuals to own artwork and real estate. Cryptocurrency investing has created new markets and opportunities where an asset can be partitioned into various sections, and each can have its owner. The crypto community believes that digital assets are the next big thing to benefit its investors. Ernest comics' non-fungible tokens are a digital asset that enables you to own stars, planets, space properties and any other terrestrial object. Holding Ernest comics' NFTs will give you access to future projects such as metaverse clubhouse and airdrops. Additionally, the Ernest comic is community-oriented and aims to integrate community suggestions into their ecosystem.

# OWN YOUR STAR OWN YOUR STORY

Dive into the ERNEST BEYOND Comic series and learn all about the characters, species and how to own your favorites as unique tradeable NFTs !

## OUR MINTINGS

An overview about our Mintrounds and future drops. So checkout what you have missed and what you can get in future. Dont miss it!

### ERNEST OG

Original Ernest in Disguise NFT + Spaceship Airdrop •

We sparked the collection with a Spaceship airdrop to all holders. These grant exclusive access + deals on our future launches and allow holders to travel across the Ernest Comics Universe.

### STEALTH LAUNCH

Original Ernest in Disguise NFT + Original Orb •

A private sale for our holders, giving them increased chances at minting a Legendary Ernest NFT, as well as the chance to create their own character design for our season two collection.

### ERNEST 360

Original Ernest in Disguise NFT + Lightning Cell + EVOs •

An exclusive sale, that gives all 360 minters a "lightning cell"- A pass to our one of one hoverboard sale. \*Hoverboards belong to different characters in the comic, mint their board and you'll forever be airdropping that character's items.

### ERNEST BEYOND

OUR FINAL PUBLIC SALE !!! •

Collect your Ernest now to begin your journey into the Ernest Comics Universe.

## THE EVO TOKENS

Ernest Voyager Orbs (EVO) are our inhouse community currency. You won't be able to trade it on the exchange.

It is coupon that is redeemable for materials and goods produced within the Ernest Comics Universe.

## THE EVO TOKENS

There is a total supply of 36,000,000 EVO tokens.

A max of 40,000 tokens will be distributed each month, through our rewards system.

21,500 will be distributed through our Ernest Engagement System (EES) \*Weekly Distribution

18,500 will be distributed through our Ernest Holding System (EHS) \*Monthly Distribution

The maximum amount of tokens an individual can collect per month is 1000 EVO tokens. \*With our current supply, this is due to change once more Ernest's are minted.

# NFT INVESTMENTS PLC DROPS PLAN TO ACQUIRE PLUTO DIGITAL

UK-based NFT Investments Plc has announced it will not proceed with its proposed acquisition of Pluto Digital Plc., although it will continue to evaluate other opportunities in the NFT space that, it believes, would add to shareholder value, the company said in a statement.

Although NFT Investments did not specify any reason behind its decision to not acquire Pluto Digital, it said the company is well positioned to take advantage of the recent market correction in the blockchain and digital assets sectors by investing at attractive valuations.

Trading in the shares of NFT Investments Plc, which were suspended pending conclusion of the discussion pertaining to Pluto Digital, will resume now. On January 24, the company signed a non-binding letter of intent to acquire Pluto Digital for £96 million, to be paid in NFT Investments' shares, subject to shareholders approval. Pluto Digital builds infrastructure in the decentralised finance (DeFi) space.

An incubator specializing in the NFT market, NFT Investments Plc has made seven investments and one exit in early-stage growth technology and media businesses engaged in NFT and digital assets totalling £5.8 million. It invests in a diversified portfolio of NFT, cryptocurrencies and in companies or funds which have exposure to NFT or blockchain technology.

NFT Investments made a profit of £1.73 million on its investments to acquire NFT-focussed gaming company, Kodoku Studios Ltd, a gain of 349%, as a

result of its takeover by Pioneer Media Holdings Inc. in November for £2.225 million in cash and shares.

In terms of its outlook for the sector, the company said the NFT sector continues to enjoy strong growth as digital assets gain increasing popularity with collectors and investors as a new asset class. It said the NFT opportunity is the first example of blockchain monetising at scale and NFT are the future of digital ownership and commerce.

“The NFT sector continues to show strong growth and we have a cash-rich balance sheet to take advantage of new investment opportunities to generate long term value for shareholders and deliver a sustained increase in net asset value, which currently amounts to 3.43p per share”, Jonathan Bixby, executive chairman of NFT Investments was quoted in the statement.

The company's net asset value amounted to £34.38 million as on December 31, 2021, comprising cash and cash equivalents of £21.9 million and net book value of investments including cryptocurrencies of £12.5 million. It has established significant positions in the following cryptocurrencies: BNB, Bitcoin, Ether, XBD, FLOW and DOT.

NFT Investments has filed an application for listing on Canada's NEO Exchange in December, the statement said. The shares of the company are currently listed on the Acquis Stock Exchange Growth Market (AQSE) and the company claims itself to be the first ever NFT vehicle to be listed in a major jurisdiction worldwide.

# FUNGYPROOF RAISES \$1 MILLION PRE-SEED TO BRING TRANSPARENCY, CREDIBILITY TO NFT

FungyProof creator and its parent studio, CR3 Labs has received pre-seed funding worth US \$1 million to advance the development of its NFT quality assessment platform. The investors in the pre-seed funding round included Cadenza Ventures, Hypersphere Ventures, ZMT Capital, Red Beard Ventures, HanDAO, Branson Bollinger and Daniel Hwang, FungyProof editor Mike Roth said in a blog post.

CR3 plans to use the funds to further expand its product offering with a crowd-sourced token review system, support for additional blockchains and the release of an API, he said, adding the company was also looking to hire new talents to help it combat scams, counterfeits and poorly built NFT examples.

“We plan to use the funds to further simplify everyone’s search for high-quality NFT and hire people passionate about the future of Web3”, FungyProof tweeted.

The NFT ecosystem is rife with scams, knock-offs and poorly constructed NFT, making it a challenging landscape to navigate and a big factor of resistance. The blog quoted NFT marketplace OpenSea to highlight that over 80% of the items created with the NFT creation tool were plagiarized works, fake collections and spam.

In addition to scams and counterfeits, flaws in

smart contract code and improper image storage may make NFT susceptible to breaking altogether, Roth said. In this context, he referred to revelations from FungyProof which said 15% of the NFT graded between November 17-24, 2021 were broken and 48% of the NFT graded used regular HTTP-based metadata. Moreover, NFT images of 14.95% of 2629 tokens graded across 529 collections were unreachable.

Hence, he said, filtering through the noise to identify high quality NFT is complicated and require significant time and technical knowhow. FungyProof, he said, aims to remove the complexity with an intuitive at-a-glance grade that makes it quick and easy for anyone to evaluate the quality of an NFT.

FungyProof’s grade combines crowd-sourced reviews with technical data analysis to assess the credibility of a project’s team and community, as well as token attributes like permanence, tokenomics, energy efficiency and market integrity. Its unique algorithm covers over 30 datapoints related to code security, decentralization and energy. Since NFT are inherently social, FungyProof also factors in reviews and community insights to cover the metrics that cannot be automated.

**PRESS RELEASE**

# FAITH TRIBE MARKED MILESTONES IN EARLY 2022

[Faith Tribe](#), a collaborative and open-source fashion design platform, has remained focused on democratising fashion in the metaverse.

Since its launch, Faith Tribe has marked significant achievements that are working in favour of not only the fashion industry but also the blockchain and crypto sphere. Some of our marked milestones in early 2022 include the following:

## **Successful Token Launch (24th February)**

Faith Tribe's native token, \$FTRB, successfully launched its public sale on the 24th February. It was launched on centralised exchanges as well as Initial DEX Offering launchpads. Despite the ongoing invasion in Ukraine, the token's success has seen heights as high as 7x listing price and has retained its stability.

## **Presence in the Paris Fashion Week (28th February – March 8th)**

The native Faith Tribe brand, Faith Connexion, showcased one of the most epic fashion shows in Paris during Paris Fashion Week. [Faith Tribe](#) featured six outfits from Faith Connexion's new collection. Faith Tribe partnered with DressX to digitally design all the pieces in 3D. The occasion, MFW's closing party, was sponsored by Faith Tribe with a successful after party, which was graced by a well-renowned DJ, Blond:ish, with the objective of promoting the brand's vision of developing a global creator ecosystem.

## **Open for Design Submissions (March 17th)**

After the successful \$FTRB public sale, [the platform](#)

[is seeking to empower designers and artists](#) in the mass market across the globe. This step is helping to build an open-source and democratic design platform. As such, designers who wish to have their works featured beside Faith Connexion's collection can submit their pieces through the online portal.

Faith Tribe also had a successful pop-up at Metaverse Fashion Week on decentraland which was a huge hit! They also have recently announced their sponsorship of the AIBC Dubai Event and of the NFT La conferences in Los Angeles.

The above registered milestones have seen Faith Tribe enhance the fashion industry in the long-term. Faith Tribe remains committed to creating and integrating relevant tools that provide opportunities for creators across the globe in the fashion industry.

# BASHOSWAP PRIVATE SALE IS ONGOING

The [Bashoswap](#) team is pleased to inform the crypto community that it has begun a private sale round for early adopters.

partnership@bashoswap.finance You must have at least 20,000 ADA in your wallet to participate in the private sale. They will offer 100,000,000 Bash tokens in its round of private sale, and investors who wish to join in the private sale can do so by emailing them at their email partnership@bashoswap.finance.

[Bashoswap is a decentralised exchange \(DEX\) on Cardano](#) founded by blockchain expert Beri Ardas and backed by a team of experienced traders and stock exchange market professionals. Bashoswap aims to develop disruptive dApps for Cardano, such as permissionless on-chain staking, lending, and governance protocols.

## Features of Bashoswap Project

### The Non-Custodial and Permissionless Project

Bashoswap is not a custodial or permission-less project, which means that you will have full control over the funds. Also, liquidity providers will be rewarded for each transaction carried out on the network.

### Multiple Protocols – Best Liquidity & Fees

As a decentralised exchange, Bashoswap is the leading exchange utilising AMM & Programmable Orderbook Model. With multiple projects, you will receive the best liquidity and fees on every transaction.

### Stake & Earn Passive Income

The liquidity pool will allow investors to earn passive income through staking their tokens. With more assets staked in the pool, you would be able to earn more tokens.

### \$Bash Token

The Bashoswap community has a utility token called “\$Bash”. This token can be used for various purposes such as staking, farming, and voting rights.

### Development of DApps

Bashoswap will bring all elements together that already exist on other blockchains, such as Uniswap, Unicrypt, and Pancakeswap’s AMM, staking, and LP Token locking models. It will be adapted to power DeFi applications using the \$Bash token powered by the Cardano blockchain.

Developers and crypto enthusiasts make up the company’s core founding team, who understand native assets, smart contracts, and the broader blockchain ecosystem. Based on its team of experienced developers and project managers, Bashoswap seems very promising.

Karnav Shah, Editor-in-Chief of Cryptonaire Weekly, commented on the potential of [Bashoswap](#), saying, “With Bashoswap, crypto enthusiasts can easily exchange ADA for native tokens on the Cardano platform. The project intends to bring Cardano-

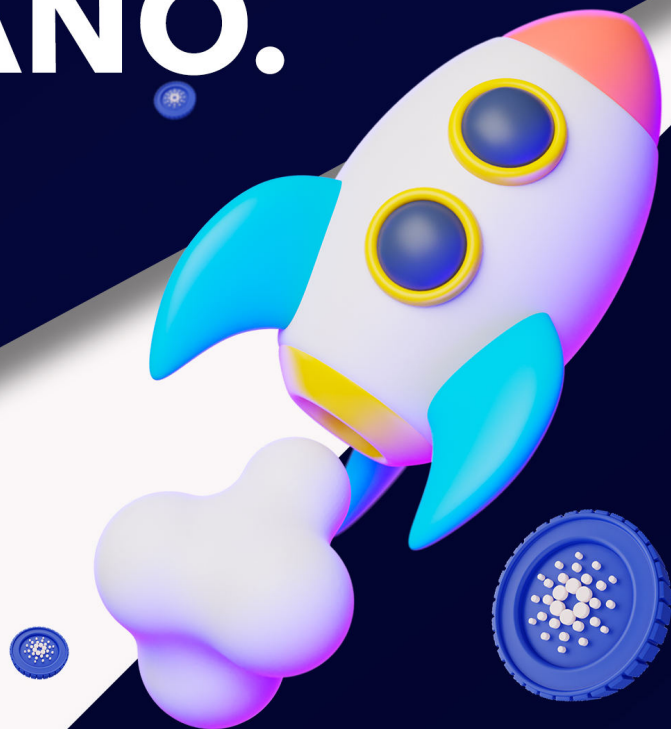

based projects into the spotlight, including AMM advancement and programming order books on Cardano. Furthermore, the project appears to be more promising as it allows investors to earn passive income from their holdings. Investing in the project now is the best move, since a limited supply of Bash tokens will be available during the private sale.”

# MULTI PROTOCOL DECENTRALISED EXCHANGE ON CARDANO.

# HUBBLE PROTOCOL STABLECOINS, USDH AND HBB, CAPTURE VALUE FOR YOUR INVESTMENT

Supercharging your liquidity on Solana is possible thanks to Hubble Protocol and USDH. Understanding what the Hubble Protocol stablecoins are all about and what you stand to benefit from them is crucial.

After going live, Hubble Protocol allowed users to mint and deposit USDH, as well as stake their HBB to earn rewards.

HBB, Hubble's native/governance token, can be deposited into LPs on Orca. The HBB token serves two major purposes that include acting as a governance token that allows holders to vote and propose changes, as well as earn rewards generated by the protocol.

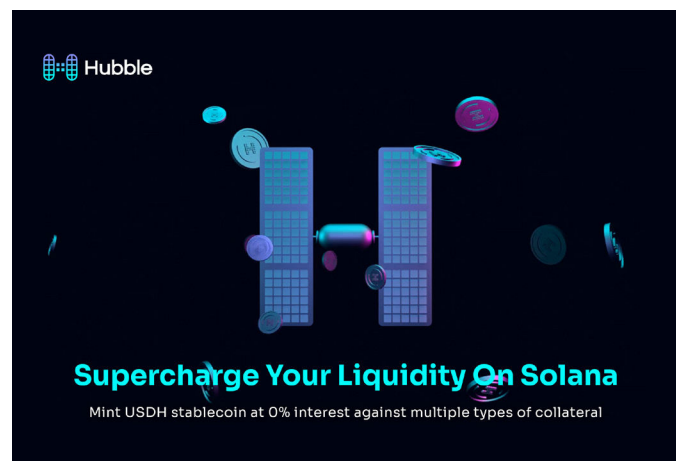

USDH, Hubble's stablecoin, you will be glad to know, has no central authority with the capacity to shut down USDH because this stablecoin is backed 150% by decentralised crypto collateral. The added advantage of staking USDH in the stability pool is that you will be able to earn HBB rewards in addition to liquidation gains, making this a win-win investment. Some USDH DeFi use cases include liquidity providing options on DEXs and transferring value across the Solana ecosystem.

Hubble, a DeFi protocol on Solana, introduced the USDH as one of the most censorship resistant and dependable stablecoins on the Solana blockchain. You can deposit and mint USDH and/or stake your

HBB to earn rewards today.

Hopefully, you have enjoyed today's article for further coverage please check out our crypto Blog Page Thanks for reading! Have a fantastic day! Live from the Platinum Crypto Trading Floor.

## ADVANCEMENTS IN THE CRYPTOCURRENCY WORLD

### CRYPTO MARKET MELTS DOWN AS BITCOIN DROPS 15%, ETHEREUM LOSES 14%

Bitcoin fell below \$40,000, while Ethereum found itself just under \$3,000.

Bitcoin dropped 15% in 24 hours today, falling below \$40,000 for the first time since March 15. Meanwhile, Ethereum dipped 14%, finding itself beneath the \$3,000 mark for the first time since March 23.

It's part of a larger trend, with crypto markets tumbling 8.5% in the span of 24 hours to hit a market cap of \$1.84 trillion, according to CoinMarketCap.

If you're looking for plausible answers as to why, it's worth checking out the equities markets. The S&P 500, an index of 500 top publicly traded companies in the U.S., closed down 1.7%, the Dow Jones Industrial Average ended Monday 1.2% lower, and the tech-heavy Nasdaq lost a full 2.2% of its value.

Bitcoin, which is historically fairly correlated to other cryptocurrency prices is, of late,

increasingly correlated with stock prices. In March, BTC's price correlation with the S&P 500 hit 0.49, with -1 meaning they move exactly opposite and 1 meaning they move in perfect tandem. It was the highest rate since October 2020, per Arcane Research.

But what's going on with stock prices?

Take your pick. There's the ongoing Russian war in Ukraine, a new round of COVID lockdowns in China, and, of course, the Federal Reserve's decision to aggressively raise interest rates and choke off the supply of money into the economy.

The Nasdaq was already down nearly 4% from Monday through Friday last week. The weekend hasn't made things much better.

# The DeepSquare Project

Decentralised High Performance Computing Ecosystem  
Sustainable. Open. Transparent.

[How to participate](#)

[Read the whitepaper](#)

## About The DeepSquare project

The **DeepSquare** project is deployed to solve the real-world challenges facing intensive computing demand today.

We will significantly reduce the energy demands by deploying hyper-efficient, specialized clusters utilizing renewable power and the latest advancements in cooling technology and heat recovery.

**1**

DeepSquare is building an ecosystem to provide Web2, Web3, dApps and High Performance Computing a true decentralised sustainable enterprise class cloud as an alternative to centralised large-tech.

**2**

By efficiently allocating workloads in real-time using the DeepSquare protocol, we will reduce the rate of idle resources and optimize the grid's energy consumption.

**3**

Democratization and fairness will be achieved via the DeepSquare token that rewards community members and distributes control equitably between the participants.

**4**

### The DeepSquare Grid

Decentralized grid of sustainable high performance computing clusters.

### The DeepSquare Protocol

Smart Contract to manage transactional flows, governance, and incentive mechanism

### The DeepSquare Marketplace

A marketplace for applications that utilize HPC (High performance computing)

### Tokens

DeepSquare Token (DPS) as an asset token and SQUARE Token as a utility token

## The DeepSquare ecosystem

## More Than \$323 Million In Crypto Futures Liquidate Over The Past Day

As the Bitcoin price crashes to \$41k today, the crypto futures market has observed more than \$323 million in liquidations over the past 24 hours.

### More Than \$323 Million In Crypto Futures Liquidate Over The Past Day

In case anyone isn't aware of what futures "liquidations" are, it's best to take a brief look at the workings of margin trading.

When an investor takes on a crypto futures contract, they have to first put forth a collateral, called the "margin." This margin can be in any crypto or in fiat.

Against the margin, futures holders can decide to loan an amount multiple times their initial investment. This is called the "leverage."

The benefit of taking leverage is that if the price of the crypto moves in the direction the holder has bet on, any profits earned will be multitudes more.

However, it also leads to much greater risk as any losses incurred will also be multiplied by the same amount as the leverage.

When a specific amount of the margin is lost to losses, the derivatives exchange forcefully closes the position. This is precisely what a liquidation is.

## Tesla Ventures Into 100% Solar-Powered Bitcoin (BTC) Mining With Jack Dorsey's Block

Electric vehicle giant Tesla is reportedly teaming up with payments platform Block and blockchain tech company Blockstream to mine Bitcoin (BTC) in Texas using solar energy.

According to a new report by CNBC, the trio will mine BTC using Tesla's solar panels and proprietary battery storage packs.

The mining outfit will feature an open dashboard where anyone can keep track of the facility's metrics, such as power output, total BTC mined as well as data on solar and storage performance.

Adam Back, co-founder and CEO of Blockstream, told CNBC at the Bitcoin 2022 conference in Miami that the facility is designed to prove that mining the top crypto asset by market cap can be done purely using 100% renewable energy.

Back says,

"People like to debate about the different factors to do with Bitcoin mining. We figured, let's just prove it. Have an open dashboard so people can play along..."

We're interested [in proving] our thesis that Bitcoin mining can help fund green power infrastructure."

# CLEANCARBON: ACCELERATE THE REDUCTION OF THE CARBON FOOTPRINT FROM THE ENVIRONMENT!

## Introduction

There is no doubt that people have become more aware of the impact on the environment that human activities have created and its potential long-term losses in terms of climate change. The awareness may be attributed to both government regulations as well as due to informed decisions made by people and companies alike, to reduce waste and resultant pollution.

Although it seems that things are finally heading into the right direction when it comes to reducing carbon footprint, there are people who believe that the changes being made are not implemented fast enough. Some places in the world still lag behind when it comes to efficient waste disposal, reducing pollution and recovering energy from used products.

CleanCarbon is a project that aims to address the fundamental issue that communities and companies

CleanCarbon explained

 **CleanCarbon**

Watch Later Share

 **BLOCKCHAIN**

 **UHTG  
TECHNOLOGY**

 **DECENTRALISED  
FINANCE**

Watch on  YouTube

face while attempting to reduce pollution and restoring energy from waste products.

The CleanCarbon project combines the benefits of Decentralised Finance (DeFi) with the physical waste-to-energy installations. It was set up to address the fundamental issues of reducing pollution and dispose or use waste efficiently such as restoring energy from waste products.

It is the first asset-backed, community driven blockchain project that cleans our planet with a new technology and dedicated team that is working to make change happen locally first, before it sets sail for global markets.

The building blocks of the CleanCarbon project are physical waste-to-energy Ultra-High Temperature Gasification (UHTG) installations, a patented technology recently developed in Europe. This technology offers a new standard of efficiency, low cost and sophistication in waste management and energy recovery. The pilot project of CleanCarbon will be implemented within Europe first and the next step will be expanding such installations to other parts of the world.

### **How does waste impact environments?**

While it is reassuring that more and more people and companies are becoming aware of the impact on environment and are doing their bits to reduce carbon footprint, there are some schools of thoughts that believe there is a lot of room for improvement, both in terms of speed and standards.

Despite more awareness and relevant government efforts, there are some places which are lagging behind when it comes to using waste efficiently and extracting or recovering energy from used products.

This problem is especially acute in many islands around the world. Due to their geographical location and the high costs of waste disposal, governments and local businesses often struggle to find practical solution to waste management.

One such place is Fuerteventura, one of the Canary Islands in Spain, which has been struggling with pollution for many years. Most of the waste, albeit segregated, from the entire island is stored in one place called Zurita.

Since shipping the waste to mainland Spain is expensive to handle properly, most of Fuerteventura's waste ends up in landfills. To make

matters worse for the environment, when there is not enough space, the waste is buried in the ground or even thrown into the ocean.

### **How does CleanCarbon address waste issues?**

CleanCarbon believes that new emerging technologies are the missing pieces to create sustainable long-term solutions and raise the much-needed global awareness about efficient waste disposal and waste-to-energy solutions. It is the first initiative that uses DeFi as a driving force to accomplish environmental goals faster and more effectively.

The team behind the project believes that blockchain can and should offer more than just software solutions and financial incentives programmed into smart contracts. Their approach is to optimally use the full potential of DeFi technologies by combining software with hardware and create multiple physical utilities for their token.

CleanCarbon has started a pilot project for its waste-to-energy UHTG installation in Canary Islands. Their systems treat almost any type of waste, as long as it contains some organic products and the right amount of moisture. After the treatment, the end product is formed as syngas, which is a high-energy hydrogen-containing mixture that can be used as a product in various industries.

The syngas produced by the CleanCarbon installations will contain between 40-75% hydrogen. This, in turn, can have many use cases such as direct use through burning, producing electricity, chemicals, liquid fuel like methanol and diesel, as well as hydrogen separation.

Inorganic materials contained in the processed product are delivered separately and can be easily collected, sold or used by the company for other purposes. The entire process is relatively simple and can be fully automated as well.

The main advantages of the CleanCarbon systems are full carbon conversion, no toxic residue, fire or smoke and highest energy recovery. It is completely environment-friendly and also compliant with all relevant government regulations.

### **The CleanCarbon Business Model**

The CleanCarbon project has a unique business model whose impact goes far beyond financial gains. It will partially use the funds collected from its global token pre-sale to finance the pilot project installation and fund the project's treasury. The

latter will be responsible for blockchain and DeFi investments. The global pre-sale of CARBO tokens is expected some time in the second quarter of 2022 and the tokens are likely to be listed around the same time.

After the first waste-to-energy installation is completed and becomes operational, a part of the generated profits will be used to buy back the CARBO tokens from the exchanges. The purchased tokens will then be burned, thereby paving the way for a premium on the prices.

The token side of the project will help finance the installation and create extra project utilities while the physical side will help stabilise and increase the token's price in the future. Moreover, in case of any unforeseeable problems affecting one part of the CleanCarbon project, the other part will be able to chip in and help.

In terms of the physical utilities of the CARBO tokens, it may be accepted as a payment method by some of CleanCarbon's partners and can be used locally to reward users for sustainable activities. It will also connect sensors in the installations with blockchain applications. The physical utilities will begin to be implemented from the first quarter of 2022, when they will also apply for European Union (EU) subventions.

As for the financial utilities, the token burning events will create scarcity of the CARBO tokens in the market, a passive income, continuous marketing and supporting life-saving foundations through charity donations.

### **CleanCarbon Project Goals**

The key goals of the CleanCarbon project are to develop new ways of connecting blockchain technologies with effective environmental initiatives. Majority of the funds raised will be used to finance the pilot project installation.

Thereafter, a part of the funds collected during the pre-sale of the tokens and a small chunk of the fees from every transaction will be kept as the CleanCarbon treasury fund. The purpose of the treasury fund is to ensure there are enough funds to grow the project indefinitely and have additional ways to boost the token prices.

It will invest approximately 30% of the funds in early-stage start-ups with enormous profit potential. Each project will be carefully researched before investing and the CleanCarbon community can also suggest new exciting projects. The key

condition here is that the projects must be aligned with the broader vision of CleanCarbon.

Another 30% of the funds will be used to buy the dips of major cryptocurrencies and cash out the profits when they gain 10-20%. The same process will be repeated whenever similar market conditions present themselves.

The balance 40% will be used in various staking platforms to generate steady passive income in the years to come. In order to achieve that, it will invest in stablecoins to ensure the security and stability of the funds. They may also invest in Liquidity Pools of selected major cryptocurrency pairs. The latter will help generate profits on main coins via staking and loans.

Apart from the financial goals, the Clean Carbon team also has plans for global expansion of their project. Once the pilot project is completed and validated, the team plans to expand the project to two other Canary Islands – Gran Canaria and Tenerife. Thereafter, it plans to set sail for global expansion.

### **Conclusion**

Considering the damage that has already been done to the environment due to reckless human activities over the last few decades, pollution, climate change and environment conservation are issues that are likely to dominate the human psyche across the world for the next foreseeable future.

The severity of the issue is evident from the fact that people involved in new technologies are also thinking of using them to tackle issues related to the environment. In that context, it is encouraging to see blockchain technologies, which have multiple potential use cases, are being explored to help improve the environment we live in.

With growing global endeavours to reduce carbon footprint and help build a long-term sustainable future for the next generations, there is no dearth of funds that are ready to support innovative projects in the realms of pollution control and environment conservation.

Once all the elements, including the physical and financial utilities of the CleanCarbon pilot project are successful, we are likely to see similar projects coming up in various other parts of the world. The CleanCarbon pilot project will act as a proof of concept and the R&D facility needed to enter new markets and test the nuances of the new technology.

## CARBO Project

CleanCarbon is the first asset-backed, community-driven blockchain project that really cleans our planet

### The key facts:

- ✓ Unique physical token utilities
- ✓ The pilot project in Fuerteventura
- ✓ Full support of the local government
- ✓ All necessary partnerships established
- ✓ Fully finalized legal framework
- ✓ State-of-the-art project tokenomics
- ✓ A global community of investors
- ✓ Experienced and accomplished team
- ✓ Carefully planned global expansion
- ✓ Vision for the next 10 years and beyond

Whitepaper

## CARBO Wallet

The release of our dedicated CleanCarbon app is scheduled for the second quarter.

The app will be a fully functional crypto wallet. It will be safe, secure, and packed with many useful feature:

- ✓ Support of multiple chain protocols (BEP20, ERC20, and more...)
- ✓ Support of multiple wallets with the ability to easily switch between them
- ✓ Advanced stats for CARBO token, showing both streams of passive income and more
- ✓ Ability to easily trade CARBO and other tokens with just a couple of clicks
- ✓ Clean and modern design that, blends in perfectly with the rest of CleanCarbon products
- ✓ Integration with CleanCarbon platform, showing live income streams coming from multiple UHTG installations (in future)

Plus much more...

## Animoca Acquires Eden Games to Make Crypto Racing Games After F1 Shutdown

Eden Games will develop NFT-powered games in Animoca’s REVV Racing ecosystem, following last month’s shuttering of F1 Delta Time.

In brief Animoca Brands has acquired longtime racing game studio, Eden Games.

Eden will work on new and existing blockchain-powered racing games for Animoca.

Animoca Brands, recently valued above \$5 billion as one of the largest crypto game publishers and metaverse investors, is expanding further by acquiring long-running video game developer Eden Games.

Founded in 1998, Eden Games is best known for developing console and PC racing games like the Test

Drive Unlimited series and Need for Speed: Porsche Unleashed. The French studio has primarily focused on racing games, including a recent shift toward mobile titles such as Gear.Club and F1 Mobile Racing.

Animoca acquired the studio from Engine Gaming & Media for \$16 million. Previously under Atari, Eden Games was temporarily shuttered in 2013 before reopening as an independent studio after Atari’s bankruptcy proceedings.

Given Animoca’s Web3 focus, it’s no surprise Eden Games will be tasked with creating blockchain-based racing games. The studio will work on existing games within Animoca’s REVV Racing ecosystem, as well as “a series” of new racing games.

## IDEG Asset Management Partners With Coinbase Prime to Launch Actively Managed ETH Fund

The new fund will be part of IDEG’s thematic product suite, “TIMES.”

British Virgin Islands-based IDEG Asset Management (IDEG) unveiled its Ethereum Enhanced Portfolio, an actively managed fund tracking the price of ether (ETH) while using, it said, a futures arbitrage strategy to enhance returns and flatten volatility. The fund will be part of the new TIMES suite

of products, short for Trust, Interest, Mining, Yield Earnings and Structured Solutions. “The Ethereum Enhanced Portfolio is our first of such products, providing qualifying investors an opportunity to capitalize on Ethereum, the most renowned smart-contract platform, while enhancing risk-adjusted returns compared to holding Ethereum,” said Emma Hu, product partner of IDEG, in a statement.

The company didn’t disclose the size or how much has been already invested in the fund. Coinbase Prime will be the fund’s prime broker and custodian, building on a relationship that started in 2019. “The need for a reputable, compliance-focused partner to meet our unique trading needs and to safeguard our

assets, and by extension safeguard the investments of our clients, led us back to Coinbase as our preferred prime broker and custodian,” said IDEG Chief Compliance Officer and COO Suen Son Poon.

Several cryptocurrency philanthropists predict that cryptocurrency donations will surge in 2022. Donation systems based on blockchain technology can provide donors with increased control over their charitable giving and increased transparency into how their donations are impacting others. Additionally, blockchain-managed tracking can increase public confidence in charities by making

it easier to monitor donations. By utilising crypto-philanthropy, the social sector may be able to generate millions of dollars more.

Transparency in the sector is also a goal of some of these new platforms, which leverage the underlying blockchain technology. Similarly, 3Quality provides a unique way to make cryptocurrency donations

and earn rewards. Through donations, they ensure that crypto traders and holders will get the best return on their money. Throughout this article, we will look at the 3QualiTy platform in more detail.

## **What is 3QualiTy?**

3QualiTy helps donors easily donate to charities through a fintech platform. The digital token 3QT and the philosophy 'Every Human is Equal' enable charity and cryptocurrency to work together. Charity is a minority interest, no matter how passionate people are about it. Thus, to attract many people where each one can earn rewards for a good cause, the 3QualiTy team came up with a unique platform. When donating to this platform, crypto traders and holders will be able to enjoy the benefits of the platform while also viewing where they can make money through charitable giving.

The team behind 3QualiTy created the platform after critically analysing the disadvantages of popular tokens. 3QualiTy is designed in such a way that holders are not burdened with high transaction fees. Based on their analysis of several protocols, they have selected BEP20. They chose BEP20 for their platform because BEP20 offers the fastest transactions and lowest transaction fees.

## **How does 3QualiTy give an easy solution to charitable giving?**

3QualiTy is the number one crypto donation solution; a platform that allows nonprofits and charities to instantly raise funds through cryptocurrencies. By utilising blockchain technology, 3QualiTy increases accountability within charitable organisations. It can lead to a positive shift in the public's perception of charities and encourage more charitable giving in the future. Here are some of the steps 3QualiTy took to improve the cryptocurrency experience with charitable giving.

### **Platform devoted to charities**

"We are committed to working with registered charities around the world. The integrity of charities will be improved by establishing a transparent and rigorous authorisation process." 3QualiTy aims to become the largest platform worldwide for donating to the causes you care about.

### **Partnerships with industry leaders**

As part of its mission, 3QualiTy looks for partnerships with corporations to enhance their platform so they can do more positive things on a national scale. To boost their platform's marketing, they have partnered with Cryptonaire Weekly, Pyramis Technology, Kindness For Soul (\$KFSG), and many more. Additionally, they have partnered with Fireblocks to ensure the safety of their platform.

### **Store for selling merchandise online**

Recent research has shown that worldwide donors are more likely to support local charities if they use charity merchandise. The promotion of charity with fundraising merchandise can dramatically impact how the audience feels about donating or participating in a fundraising event. To raise more funds for 3QualiTy's main cause, they will be holding online sales of memorabilia, apparel, and other products. Their online store will offer a variety of merchandise, including T-shirts, mugs, shoes, apparel, and more. 3QualiTy has decided to donate 15% of its profits to charity through its wallet. You can access the Charity Wallets via the app.

### **Transparency Improved**

Several charities have been mishandling contributions or misrepresenting the paths of donations from donors to end beneficiaries in recent years. However, 3QualiTy uses blockchain technology, which is a good solution to the transparency issues charitable organisations face. Crypto traders and holders will have an option to track every transaction in the cryptocurrencies market, no matter how big or small.

### **Worldwide Access**

3QualiTy also enjoys the ability to instantly send funds anywhere without middlemen or transaction fees with cryptocurrency. In this way, donors can securely send their donations to any location.

## **3QualiTy Treasure Hunt: Earn Crypto rewards**

The 3QualiTy Treasure Hunt app offers users the chance to earn rewards by participating in donation campaigns. With Treasure Hunt, users will have

an opportunity to acquire cryptocurrencies like Bitcoin, Ethereum, 3Quality's token, or any other currency set up by the management side. There will also be giveaways from their partnering vendors and sponsors, including 3Quality merchandise.

You can see a list of all treasures on the map. After the user collects these virtual items, they will be turned into tangible items. Occasionally, the Treasure Hunt will feature special hunts, such as the Game of Clues. These are just some of the features of the 3Quality Treasure Hunt.

### **Free Give-a-ways**

3Quality allows you to donate cryptocurrency to charity and grant a bright future to those living at a disadvantage worldwide. Donating to these causes will provide you with many rewards. To provide users with the best rewards for the Treasure Hunt, 3Quality is giving away free cryptocurrencies. Participants can play the Treasure Hunt game to receive passive income.

### **Earn money by staking**

Staking may be a good way for you to increase the value of your coins. 3Quality platform offers crypto traders and holders the opportunity to stake cryptocurrency to earn rewards. Those who are staking have to lock their coins for a set period to earn rewards. By staking your 3QT tokens, you can earn staking rewards on top of your holdings and compound those future rewards to grow them further. The management console displays reward percentages and other terms like the shortest period and longest period.

### **Earn money playing games**

A Game of Clues is also available as an alternative way to play the Treasure Hunt. The Game of Clues offers participants the chance to win large prizes. To enter this level of play, there will be an additional admission fee. All proceeds from this fee will benefit charitable organisations.

You must donate a pre-determined amount to the Charity Wallet using the donate button to participate. Until the donation has been made, the user will not be able to participate. Treasure Hunt

players will have access to Game of Clues as an added benefit. Furthermore, visitors to the platform will be able to provide and request help within the mobile app. All requests for charitable contributions must be validated by an independent reading board, a volunteer committee that reviews all requests. The applicant must provide documentation proving the need for the donation.

### **Seed sale and private rounds**

3Quality offers an exceptional experience for early crypto traders and holders by virtue of its rewards. There are various benefits you can enjoy as an early bird in the seed sale and the private sale round. As a result, crypto traders and holders who are interested in taking part in a good cause can earn as they donate.

## **3Quality Goals & Give2Earn Mission Explained**

### **3Quality Goals**

3Quality's main goal is to channel some of the wealth circulating in blockchain technology towards people who need assistance and organisations actively providing assistance and saving lives. To accomplish their main goal, 3Quality has designed a structure that will generate revenue through the sale of ads within the Treasure Hunt. 15% of profits from these ad sales will be donated to charity, with the rest going toward staff salaries, operations and website maintenance.

### **Give2Earn Mission**

The goal of every crypto trader and holder around the globe is to make money. In today's market, those in cryptocurrency are looking for a product with a self-sustaining revenue model. 3Quality is a sustainable platform that enables you to earn money while supporting a good cause.

3Quality's Give2Earn Mission is dedicated to helping those who need it most. By securing the application interface between charity and decentralised ledger technology, 3Quality aims to help people regardless of colour, class, or religious beliefs. The mission of the 3Quality is to realise the full potential of fundraising worldwide and collaborate with many conscientious organisations to ensure the best

service to the needy.

### What is 3QualiTy's mission & vision?

There are many barriers to success for charities because of a lack of transparency, accountability issues, and a limited number of ways they can accept donations. With crypto-philanthropy, these organisations may be able to raise funds more efficiently and receive donations through decentralised and direct transactions. This approach provides fair opportunities in life by providing tools for mental wellness, independent living, and dignity.

Meanwhile, 3QualiTy's vision is a future where people live without judgment or discrimination. They will ensure that charities are accountable by urging them to do so. Furthermore, a platform where contributors feel secure knowing that their contributions reach the intended recipients equally and without discrimination.

### Conclusion

Over the past few months, charities and donations have become a hot topic in the cryptosphere. However, the donation is not just a fundamental act of generosity. From crypto donors to registered charities, the governments of many countries offer generous tax deductions. The crypto market is expected to flourish as donations through digital currencies become more commonplace, and crypto-philanthropy will also grow in popularity. Through the 3QT token, 3QualiTy provides crypto traders and holders with a new charitable giving experience. 3QualiTy bridges cryptocurrency and charitable giving, while offering relief to multiple communities in need. Additionally, the company creates a platform where donors can access multiple revenue streams. The 3QualiTy token simplifies charitable giving because it eliminates all the issues in previous tokens. The project looks very promising since it offers many crypto rewards when you donate. It may be a good crypto buy, but you need to do your homework first.

# 3Quality For All

every human

## 3Quality

is the easy solution to charitable giving.

At a time when so many need so much, others have found fortune in cryptocurrency and they are ready to share the wealth.

## 3Quality

### Our Main Goals

3Quality's main goal is to help others and here are our plans to reach this goal.

- 1** CHARITABLE PLATFORM
- 2** REVENUE
- 3** TREASURE HUNT
- 4** ONLINE STORE
- 5** PARTNERSHIPS
- 6** STAKING REWARDS

## WHO IS 3Quality?

3Quality is a fintech company that offers an easy solution to charitable giving. Through our digital token, 3QT, and our philosophy 'Every Human is Equal,' charity and cryptocurrency go hand in hand.

## TYPE OF CRYPTOCURRENCY

After carefully examining the disadvantages of popular tokens, 3quality thought it was best to build our platform in a way that our holders are not affected by high transactional fees. After long comparison we chose BEP20 which has its unique characteristics of fast transactions and low transactional fees

## FUNCTIONS AND PLATFORM

Our 3Quality platform supports free user to user off chain transfers. On-chain transactions will incur on-chain fees.

Charity/Charity Wallets will be displayed from the App. From ALL profits made by 3Quality with the exception of profits from the seed or private sale, we will donate 15 percent to charitable causes through our charity wallet.

## Kraken shuts down global headquarters because 'San Francisco is not safe'

**K**raken CEO Jesse Powell announced that he has made the decision to close Kraken's global headquarters in San Francisco.

The Golden City is losing its shine as one of the largest United States-based cryptocurrency exchanges closes its San Francisco-based headquarters.

Kraken CEO Jesse Powell retweeted an announcement stating that the exchange will close its global headquarters at 548 Market Street, in the center of San Francisco. In the statement, a copy of which was initially tweeted by San Francisco-based political commentator Richie Greenberg, Powell states:

"We shut down Kraken's global headquarters on Market Street in San

Francisco after numerous employees were attacked, harassed and robbed on their way to and from the office."

A spokesperson from Kraken told Cointelegraph that their "responsibility has been, and always will be, to ensure the safety and security of our team members," adding that Kraken has "no plans to establish a new, formal global HQ" following the San Francisco closure.

A poor advertisement for living in California's financial center, the statement also alleges that "San Francisco is not safe" and crime is "dramatically underreported."

Coinbase, another U.S.-based cryptocurrency exchange, will also close its San Francisco headquarters in 2022;

## Epic Games Teams Up With Lego to Build a Kids Metaverse

Epic Games, the game developing studio, and Lego, the famous construction block company, have announced a partnership to develop a metaverse designed for kids. This metaverse world aims to allow kids of all ages to become builders and design their own experiences while protecting their right to play by putting online safety as one of

its main objectives.

Epic Games and Lego to Launch Joint Metaverse  
Epic Games, the developer behind Fortnite, and Lego, the famous toy building block company, have inked a partnership to produce a joint metaverse. The metaverse initiative will be designed from the ground up to be suitable for kids of all

ages who, according to the press release issued on the Epic Games website, will be able to create their own experiences.

The press release detailed:

The family-friendly digital experience will give kids access to tools that will empower them to become confident creators and deliver amazing play opportunities in a safe and positive space.

Neither of the companies indicated the theme or characters that the metaverse will include. However, the two companies already have experience in building metaverse-inspired worlds, with Fortnite being one of the most popular online games. Lego was also behind an online game called Lego Worlds, which was launched in 2015 as a direct competitor to Minecraft.

### What is Solidus Ai Tech Ecosystem?

Solidus AI Tech is a subsidiary of Solidus Technologies. They were developed as the AI subsidiary of the firm. Solidus AI Tech's vision is to create data centers and IaaS infrastructure for the provision of AI services. They will provide High Performance Computing (HPC) AI services to the EU but can be utilised by organisations Globally. They have future plans to build additional data centers across Europe and further expand across the globe. Their first HPC Data Center is based in Bucharest, Romania where the electricity costs are low and clock in the fastest Internet speeds in Europe.

Once complete, this will be one of, if not the largest HPC facility in Europe and will target governments, mega corporations, small and medium enterprises and professionals across multiple fields. The company has also developed proprietary technology that efficiently utilises energy consumption and consumes less energy by up to 40% of the industry average. Solidus AI Tech will use AI HPC Servers for computation. These are extremely fast and take minimal time to train AI models.

The company is working closely with the Ministry of Education in Romania. In a tribute to 128-bit GPU cores which are fundamental to the next generation of Artificial Intelligence they will plant 128 trees in close proximity to the data centre. They decided to include the students because they will be the next generation of engineers working for them so are

keen to educate them towards green development.

Solidus is a member of the Crypto Climate Accord. Their overall objective is to decarbonize the global crypto industry by prioritizing climate stewardship and supporting the entire crypto industry's transition to net-zero greenhouse gas emissions by 2040. The Accord has two specific interim objectives:

- Achieve net-zero emissions from electricity consumption for cca signatories by 2030.
- Develop standards, tools, and technologies with cca supporters to accelerate the adoption of and verify progress toward 100% renewably-powered blockchains by the 2025 UNFCCC COP30 conference

The Crypto Climate Accord will create wins for both the planet and the global economy. For climate advocates, they can eliminate emissions from a fast-growing source of electric load. For the cleantech industry, they can onboard an entirely new class of customers with significant demand for low-carbon solutions. For the crypto industry, they can help support widespread adoption of crypto by making the industry more sustainable.

Solidus' AITECH HPC data centre infrastructure will run highly efficient algorithms. From the initial consultation, they will be able to clarify how they can optimise for maximum effectiveness for each application and how their customised HPC

environments would work for their clients' needs. At the core of the business, they ensure reliability and security to their clients and do so in a cost-effective and environmentally friendly manner.

Their secure, sustainable computing environment is the perfect solution for anyone prioritising climate goals and carbon targets –

#### Air Cooling Technology

The advantages of evaporative cooling are well documented. This energy-efficient, environmentally friendly technology consumes 80% less energy than compressor air conditioning, can lower the air temperature by up to 12 degrees, improves air quality by removing dust, fumes and unpleasant odours and does not require the closing of doors or windows.

HPC is already consuming large portions of the world's available energy, with various air-cooling solutions consuming up to 30%–40% of the total energy deployed. Hence, there is an urgent need to deploy sustainable solutions.

By using a special software algorithm and customised hardware architecture, one high-performance AI HPC Server uses similar power to a household light bulb, and all the materials are renewable. The heat generated by the machines will also be channeled to their production facility to provide warmth during the cold season.

HPC demand is growing exponentially across the globe. In Europe, companies consume over 30% of the global HPC, while only producing 5% of HPC output. Most of the HPC services in Europe are outsourced in the US. This is usually expensive and still not enough. Engineers from the EU say that they depend on America for HPC services by a factor of 10. There are no large HPC facilities in the EU that form part of the top 10 largest HPC facilities in the world.

Solidus will be the largest HPC facility in the EU. It will fill a significant portion of the HPC needs for the consumers in Europe. The AI services that will be provided by this data centre will also be significantly cheaper than those procured from America. This is because the platform uses less energy and is based in Romania, where the cost of energy is significantly lower.

The facility will also have round the clock security. It will have physical guards manning it and all of the

employees who access the facility will have to be screened and be background checked. The head of security 'Alexandru Galusca' is a Retired Brigadier General of the Romanian Air Force, squadron leader in Air Force Staff operational units, Chief of Military Intelligence and Deputy Military Representative to NATO and the EU.

A Vulnerability Monitoring Platform will be deployed at the centre that will continuously monitor the network for any vulnerability. This monitoring platform is highly secure and cannot be accessed through the use of IP addresses or MAC addresses.

So far, there are significant developments that have been made. The data centre has been built and they are actively raising funds to purchase and install their AI HPC infrastructure. The total amount of funds that will be needed for the whole project is \$45 million. Solidus' partner Soft Galaxy International has been approved for a \$3 million grant to go towards the AI infrastructure. The remaining balance of \$42 million is being raised via their AITECH token sale.

### **Solidus Ai Tech will transform lives, but how?**

Demand for AI services across the world is increasing at an unprecedented rate. AI is the future of computing. Currently, we are seeing more industries increasingly relying on AI services. Here Solidus AI Tech is working to be the future of AI services! Government agencies will depend on AI tech to plan their cities, design roads from AI models, and even plan settlements for their citizens. Medical facilities can use AI to detect diseases such as cancer and diabetes early. They can then model the right kind of medicine that can be used by their patients. AI can also be used in medical facilities to predict the chances of survival for a particular ailment and administer the right mix of medicine. In the entertainment industry, AI can be used to create special effect graphics and features that can give the audience an even better experience. Live events and shows can also be captured well with the use of AI. Intelligence agencies across countries can use AI to also monitor their target environments. Autonomous vehicle manufacturers can use AI to create vehicles that can see and move on our roads unaided. These vehicles will be game-changers in the transport industry and will drastically reduce cases of road accidents. Daily household tasks like washing vehicles, utensils and even taking care of the sick can be better managed by AI. These machines can also take pets for a walk, baby sit and even clean the house at set intervals. Research

# SOLIDUS AI TECH WILL TRANSFORM LIVES, BUT HOW?

CRYPTONAIRE  
WEEKLY  
CRYPTO INVESTMENT JOURNAL

1

Demand for AI services across the world is increasing at an unprecedented rate. AI is the future of computing. Currently, we are seeing more industries increasingly relying on AI services. Government agencies will depend on AI tech to plan their cities, design roads from AI models, and even plan settlements for their citizens.

2

Medical facilities can use AI to detect diseases such as cancer and diabetes early. They can then model the right kind of medicine that can be used by their patients. AI can also be used in medical facilities to predict the chances of survival for a particular ailment and administer the right mix of medicine.

3

In the entertainment industry, AI can be used to create special effect graphics and features that can give the audience an even better experience. Live events and shows can also be captured well with the use of AI. Intelligence agencies across countries can use AI to also monitor their target environments.

4

Autonomous vehicle manufacturers can use AI to create vehicles that can see and move on our roads unaided. These vehicles will be game-changers in the transport industry and will drastically reduce cases of road accidents. Daily household tasks like washing vehicles, utensils and even taking care of the sick can be better managed by AI.

5

These machines can also take pets for a walk, baby sit and even clean the house at set intervals. Research facilities can use AI to perform complex scientific calculations that would otherwise not be possible. These calculations can lead to new discoveries and scientific breakthroughs.

6

Industries and manufacturing entities can use AI models to create better products, conduct tests on them and fix any defects that may arise before launching them into the market. This will lead to cost saving and also enhance the quality of products that we receive.

CRYPTONAIRE  
WEEKLY  
CRYPTO INVESTMENT JOURNAL

facilities can use AI to perform complex scientific calculations that would otherwise not be possible.

These calculations can lead to new discoveries and scientific breakthroughs. Industries and manufacturing entities can use AI models to create better products, conduct tests on them and fix any defects that may arise before launching them into the market. This will lead to cost saving and also enhance the quality of products that we receive. Financial institutions can use AI services to track customer details, detect fraud and also track financial markets across the world in real time.

### **How does Solidus AI Tech utilise blockchain technology?**

Solidus AI Tech has strong relationships with Governmental Authorities and Megacorps who have a high demand for AI HPC services and will also market to attract SMEs and Professionals who have a need for AI services.

Users will be incentivised to use AITECH tokens and a simple fiat to AITECH swap option will be available. These tokens are ERC-20 tokens that can be used for the purchase of AI services. An Infrastructure-as-a-Service (IaaS) portal will be set up where users can access, make payments and choose whichever service they would like.

Use of tokens to make purchases and redeem these tokens later for services on the platform or just as an investment shows that Blockchain technology is used on this platform as the core technology.

### **What is AITECH TOKEN?**

The AITECH token is the World's first AI utility token that will be used on this platform. Users who want to take part in the development of the platform can purchase AITECH tokens through sales that are done in three phases.

Investors who own AITECH tokens will be categorised into groups. The first group are those who will own the token and hold or stake them for growth. The second group of token holders are those who will have the tokens and redeem part of them for AI services offered on the platform, while also holding or staking the rest for growth. The third group of token holders are those that will purchase the tokens specifically so that they can redeem AI services that are offered on the platform.

The tokens can only be utilised once the IaaS platform is up and running. All token holders have the option of staking their tokens and earning

rewards from this. A total of 1.5 billion AITECH tokens have been set aside as rewards for token holders who may want to stake their tokens. Yields that come from staking tokens is estimated at around 7.5% annually.

The total number of tokens that will be created are 10 billion tokens. Out of these, 4 billion tokens have been set aside to be sold to investors in three stages: Private Sale, Presale, and Public Sale. Interested investors can purchase these tokens using USDT, BTC or ETH.

### **How can investors earn rewards with AITECH TOKEN?**

Investors can earn rewards by staking their tokens. They will be rewarded with AITECH tokens. Staking yields about 7.5% annually. A total of 1.5 billion AITECH tokens have been set aside as staking rewards. These rewards will be dependent on market forces and will have to be confirmed by the AITECH team.

There will also be quarterly lotteries for stakers where winners will be identified and airdropped additional AITECH tokens.

### **A quick look at Solidus Ai Tech Vision**

The vision of Solidus AI Tech is to create eco-friendly data centres and IaaS infrastructure across Europe. The company is also keen to set up the largest HPC facility in Europe. This facility will target European clients and enable them to access HPC services at an affordable rate. Once the data centre is completed, it should land among the top 10 largest data centres in the World and enable European clients who are in need of HPC services to access these services from Europe, as opposed to the current situation where most of these services are accessed from America.

The team at Solidus is also committed to environmental sustainability and conservation. That is why they are part of the Crypto Climate Accord. Members of this accord subscribe to renewable energy for powering blockchain solutions and giving net zero emissions. The company will also work closely with government agencies to encourage and promote local tech talent and also plant trees.

### **Conclusion**

Solidus AI Tech is set to be the largest eco-friendly HPC facility in Europe. Setting the data centre in Bucharest, Romania, where electricity costs are favourable, will enable the facility to provide AI services at favourable rates, as opposed to the current price. The data centre will also

utilise proprietary algorithms and IP that will see it consume 40% less energy – this saving should be transferred to the consumers. who will enjoy favourable pricing on the services.

The platform has made significant progress towards accomplishing its vision of being the largest data centre for HPC service provision. So far, they have already secured funding from the EU for completing the project. In conjunction with their venture partner, Soft Galaxy, they have secured close to \$3 million as grant funding from the EU. The remaining balance of \$42 million is expected to be raised from investors and users of the platform through token sales. Seeing that demand for AI services is bound to increase and there is a big market for AI services across Europe, we expect that the three stages of the token sales will be oversubscribed.

Upon completion of the three fund raising rounds they will burn AITECH tokens quarterly and will do this until their (IaaS) platform goes live. When the (IaaS) is live they will then burn a percentage of tokens at the end of each quarter that have been used to purchase AI services to further decrease the circulation supply. Via their relationships with Governmental Authorities and Megacorps they anticipate that long-term holders should see significant gains in token value.

Investors stand to gain three-fold by taking part in the token sales. First, they can hold the token, as the value of the tokens will be rising by 5% per

week until Public Listing. Secondly, investors will also be given rewards from staking tokens on the platform. There will also be lotteries that will be carried out every quarter for stakers and winners will be airdropped with AITECH tokens, increasing the overall number of tokens they'll have. Thirdly, they can use these tokens as utility tokens where they can access AI services from the platform. Users who purchase AI services by swapping fiat to AITECH, or use AITECH tokens, will be provided with special discounts and faster speeds.

The company has three token sale events that start in November 2021 (private sale) and end in April 2022 (public sale).

The security of the data centre is also a top priority. Care is given towards ensuring the premise is always secure. Manned guards will be stationed on the premises on a 24/7 basis. A vulnerability monitoring platform will also be installed at the centre to track and monitor all operations. This platform cannot be accessed using IP or MAC addresses. A senior ex-military member of staff has also been identified to handle all security operations to NATO standards within the company.

The company is a subsidiary of Solidus Technologies who are an Ethereum (ETH) mining organisation. Their joint venture partner Soft Galaxy International have extensive experience in managing large projects and have a team of dedicated professional with experience in managing blockchain projects.

## Mexico's Third Richest Man Says No To Bonds, Yes To Bitcoin

**R**icardo Salinas Pliego is the third richest man in Mexico who has been making headlines for his stance on bitcoin. The billionaire saw Elektra, a supermarket chain, become the first to accept bitcoin payments in the future. He has also been a strong advocate for investing in the digital asset as opposed to traditional assets. This time around, the billionaire has shocked investors after revealing that he now holds the majority of his portfolio in bitcoin.

**60% To Bitcoin**  
During the Bitcoin conference that is being held in Miami, billionaire Ricardo Salinas made a shocking revelation. He said that the majority of his portfolio was in bitcoin and bitcoin equities, making up a total of 60% of the said portfolio. This is up significantly from the 10% of his total net worth

that Salinas had said was in the digital asset last year. Going by this means that Salinas currently has billions of dollars worth of exposure to the pioneer cryptocurrency.

Although the allocated portion of the billionaire's portfolio to bitcoin is large, it is no surprise that he chose to take the plunge. For the longest time, Salinas has been advising investors to put a portion of their portfolios into the digital asset. Often advising against storing wealth in fiat currencies.

**It's A No For Bonds**  
Bonds have been a way for the ultra-wealthy to secure safe returns for the longest time. However, with inflation rates rising faster than the interest rates on these bonds, interest in them has declined over time and Salinas looks to have sworn them off completely.

## Fashion brand Zara launches first solo collection in the metaverse

**W**ith a brand new collection for the online and offline world, Zara will let users dress themselves in the metaverse.

Fast fashion brand Zara has launched a brand new collection called Lime Glam, designed to be worn both inside and outside the virtual world. The garments and accessories can be worn inside the Zepeto metaverse and are also available in physical stores.

As wearables quickly become the latest fashion trend and steer their way into the minds of the fashion-conscious public, mainstream brands like Zara are keen to get involved.

With metaverses like Decentraland, Somnium Space, Zilliqa, and others now providing a home for brands to cater to avatars, there

are more wearables being designed with dual roles, one for your in real life (IRL) appearance and the other for your virtual self.

So how can our avatars merge with our physical personalities? The easiest way to showcase your personality in the metaverse is to choose the wearables that reflect your style.

If a buyer opts for the physical version they will also get access to the digital version, streamlining the buying process. The dedicated section on the Zara website showcases avatars wearing the new Lime Glam collection, providing inspiration for those who wish to purchase any of the items.

The Zepeto application also offers a photo booth, digital walls, and a floor for this particular collection.

# ETH devs implement first-ever 'shadow fork' as PoS testing continues

The shadow fork, which is intended to test the next phase of Ethereum's configuration, has no impact on the existing mainnet.

Ethereum developers implemented the network's first-ever "shadow fork" on Monday, marking an important milestone in the ongoing shift to a proof-of-stake (PoS) consensus.

The shadow fork provides a venue for developers to stress test their assumptions around the network's complex shift to PoS, according to Ethereum Foundation developer Parithosh Jayanthi. "The aim of the Kiln merge testnet was to allow the community to practice running their nodes, deploying contracts, testing infrastructure, etc.," he tweeted on Sunday.

Wondering what the #TestingTheMerge team has been up to?

The aim of the Kiln merge testnet was to allow the community to practice running their nodes, deploying contracts, testing infrastructure, etc. We hope it's helping the community get a sense of the post merge world!

Kiln refers to the last testnet of the so-called merge, which involves transitioning Ethereum's Execution Layer from proof-of-work to PoS. In a March 14 blog post, the Ethereum Foundation described the merge as a "culmination of six years of research and development" intended to make the network more secure and energy-efficient.

## Crypto Trading Volumes in India Collapse 10 Days After New Tax

The volume on WazirX, the country's largest exchange, has plunged by 72%.

Crypto trading volumes of India's major exchanges have nosedived since

April 1, the day a new tax on crypto profits came into effect, according to data collected by Crebaco, a cryptocurrency research firm. The volumes of four Indian exchanges were collated by analyzing data on CoinMarketCap and Nomics, a data firm. The data reveals a drop of 72% on WazirX, 59% on ZebPay, 52% on CoinDCX and 41% on BitBns. The trading volumes were measured in U.S. dollars. India now has a 30% tax on profits from crypto transactions and doesn't allow

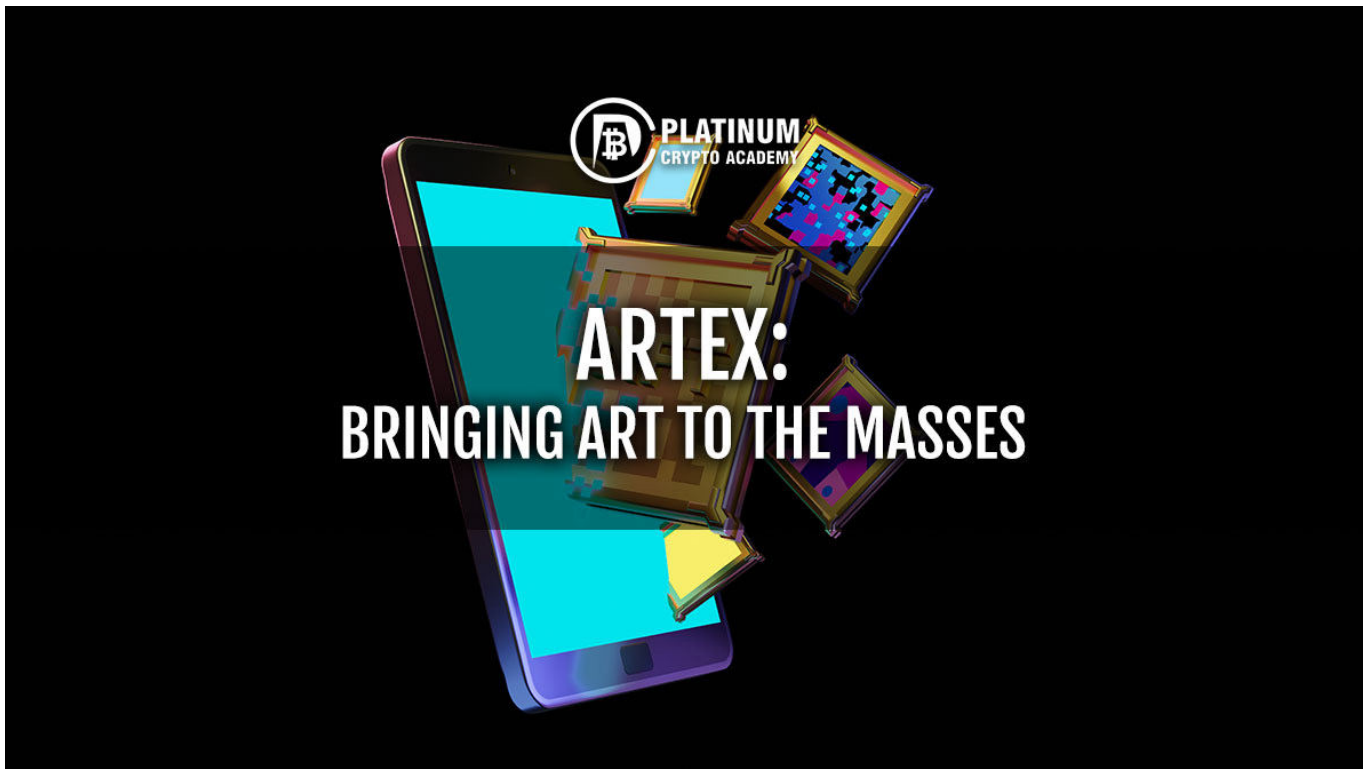

offsetting gains with losses from other crypto transactions. The most controversial provision – the 1% tax deducted at source (TDS) liability – won't take effect until July 1.

It is unclear whether the drop in trading volumes is because of the new tax law as the drop in volumes on Indian exchanges is largely in line with a global trend.

"This has created a new benchmark. It can go further down or sideways, but it is unlikely to go back up.

NFTs are digital certificates associated with blockchain-based digital assets. Essentially, they represent digital assets in the form of cryptocurrency tokens. You can buy NFTs for original artwork, trading cards, music, videos, and anything digital. The trend of art NFTs has been around for two years, where artists sell their artwork for a high price. These art NFTs are growing rapidly.

Globally, the art market accounts for about \$60 billion in annual market volume, according to Statista's (2021) data. Additionally, the data projects that the online art market will be worth \$9.32 billion in 2024. In the Art NFT space, many users own art pieces, and various projects are available. However, investment in fine arts can be problematic for small investors. That's where Artex comes into play.

Artex believes that everyone has the right to own first-class artworks, not just the fortunate or privileged. Their vision is to ensure acquiring and participating in artworks becomes the new crypto trend. With blockchain technology, they provide products and services that benefit all investors, no matter how big or small.

### **How Artex Platform Brings Art to the Masses**

Today, art investments are among the safest alternative investments available. Sadly, this option

is the playground of only a privileged minority and other people who participate as spectators by paying a fee. At this point, Artex intends to break this pattern by offering first-class artwork tokenised on the blockchain to everyone, both elite minorities and the general public.

This platform's primary goal is to allow users to participate in high-quality artworks within their budgets. Artex is therefore designed with the logic of a traditional stock market, where users can purchase and sell artworks with the local currency (fiat) or cryptocurrency. The platform features works from famous artists and artworks from young artists who are on the verge of becoming famous. The listed artworks are offered to major auctions and exhibited at various global organisations each year. As a result, user rights are always fully protected in the short, mid, and long-term.

By breaking down million-dollar works into smaller units, Artex has achieved its mission to be the leading provider of first-class art for its users. Consequently, the public may transition from being a viewer to become a possessor. Therefore, all people have the right to participate in art, and popular artists' artworks are not subject to enslavement. This is how Artex promotes the arts among the masses.

### **Artex Platform: How it Works**

Artex creates digital certificates using blockchain technology to safeguard artworks. Smart contracts are used for tokenising and registering artworks on Binance’s Blockchain Network. During the process, users are provided with all information transparently, including the artwork’s identity, its smart contract, the total supply, and the wallets. By registering on the Artex platform, users are also given a BEP20 wallet, where they keep all the tokens received from the platform. Below, we explain the process in more detail.

**Listing Artwork**

The Artex platform offers first-class artworks from artists, galleries, and collectors based on their requests. Through the Artex commission, the platform evaluates requests from artists, galleries, and collectors to list works of art. This commission comprises artists, academics from various universities around the world, and leading curators in the art community. The commission determines the value of the artwork based on its evaluation.

**Tokenisation of Artworks**

The artworks are insured for a higher amount than the amount set by the Artifact Valuation Commission. After that, the Artex platform lists the token on Binance Smart Chain following its insurance value and makes it available for pre-sale on our platform. Each year, the listed works are exhibited worldwide and sold at auctions. In this way, investors’ rights are always protected in the short, medium, and long run.

**Public offering of 49% of the artwork**

In this scenario, the entire insurance value of the artwork is tokenized and 51% of the tokens are smart contract locked on the owner forever. Thus, it is guaranteed that only 49% of the artwork will be traded on the platform. This is called physical ownership. In this case, the ownership, insurance costs, and maintenance costs of the artwork are held by the owner.

**Using an auction system**

There will also be an auction system on the Artex platform. Art owners can earn income by listing

**WHAT IS THE ARTEX TOKEN, AND WHAT ARE ITS FEATURES?**

Artex Token is a native digital cryptographically-secured token representing attributed utility functions specified in the protocol/code of the Artex platform. The token is designed to be used on the platform only as an interoperable utility token. Below are some features of Artex Token:

- 1 TRANSACTIONS ARE PERFORMED DECENTRALISED**

Artex's tokens are non-refundable and function utility tokens. The Artex Token is intended to be used by participants on the Artex platform to exchange information in a decentralised manner.
- 2 TOKENS OF TRUST**

The aim of introducing Artex Token is to provide participants with a convenient and secure way of making and receiving payments. Additionally, it is not intended for use as a medium of exchange for goods or services or payment.
- 3 ENCOURAGE ECONOMIC GROWTH**

The Artex Token offers the economic incentives that will be distributed to encourage users to contribute and participate in the ecosystem. As a result, all participants are fairly compensated for their efforts, creating a win-win situation.

ARTEX

their artworks in an auction using this system. In the course of Artex's auction, the owner's artwork is held. The bids of each participant in an auction and bidding are recorded and protected by smart contracts. After the auction period has ended, the user who placed the highest bid becomes the new owner of the artwork. An artwork's ownership is recorded on the blockchain platform through a smart contract, and the artwork is transferred to the new owner.

### **What is the Artex Token, and what are its features?**

Artex Token is a native digital cryptographically-secured token representing attributed utility functions specified in the protocol/code of the Artex platform. The token is designed to be used on the platform only as an interoperable utility token. Below are some features of Artex Token:

#### **Transactions are performed decentralised**

Artex's tokens are non-refundable and function utility tokens. The Artex Token is intended to be used by participants on the Artex platform to exchange information in a decentralised manner.

#### **Tokens of Trust**

The aim of introducing Artex Token is to provide participants with a convenient and secure way of making and receiving payments. Additionally, it is not intended for use as a medium of exchange for goods or services or payment. Hence, it is secure and can be used for purchasing fine arts.

#### **Encourage economic growth**

The Artex Token offers the economic incentives that will be distributed to encourage users to contribute and participate in the ecosystem. As a result, all participants are fairly compensated for their efforts, creating a win-win situation. Artex will award tokens to users only based on their contributions, activity, and platform use. Inactive participants will not receive any Artex Token rewards.

#### **Uses of Artex Tokens**

As Artex's platform gains worldwide popularity, utility value and its demand for tokens will both increase simultaneously. Below are some things you can do with the Artex Token this time.

- Tokens are used to pay platform fees for smart contracts production and approval.

- The Artex Token will be used to participate in auctions and bids.

- Artex Token holders will have access to exclusive privileges like participating in international events organised by the platform.

### **An overview of Artex Tokenomics**

The platform's main goal is to maintain the balance between the supply and demand of Artex Tokens. Artex Token's supply will remain at 100.000.000 (\$100 million) in an unchanging manner. Half of the total supply will be made available in the first year of issuance. The remaining 50% of the supply will be released into circulation within four years at predetermined times.

For Artex Token to be easily accessible and to encourage ecosystem growth, users must be incentivised to act as liquidity providers. As part of the decentralised market-making process, users must stake digital assets to ensure the liquidity of transactions. In exchange for opportunity costs, these liquidity providers will be rewarded with Artex Tokens if they help the adoption of the Artex platform by staking assets or adding them to liquidity pools. Rewarding users will be based on their relative contributions after making adjustments and corrections.

Despite the distribution of Artex Tokens, users do not own or benefit from any company assets. They also no longer own any of the company's affiliates. As far as developing a secondary market or exchange for trading Artex Token is concerned, this will be run and operated by independent parties.

### **Conclusion**

The crypto art world is booming thanks to the sales of NFTs, digital artists' contributions, and the growth of collectors' communities. There were problems with crypto art investments in the past, but Artex has also solved those issues. Fine arts exchange platform Artex is the first blockchain-based platform in the world. As the world's first and only platform of this type, it represents the art market's future. The platform is completely trustworthy as it gives all investors, whether big or small, the opportunity to invest in fine arts. If you are a small investor and would like to invest in fine art, consider Artex.

## Welcome the Future of **Fine Arts**

World's first and only blockchain based artpiece exchange platform

We believe in a world where not only the lucky and privileged few, but everyone can invest in first-class artworks. Blockchain is the safest way to achieve this.

## WHY BUY ARTEEX TOKEN NOW?

The digital currency of the Artex ecosystem is Artex Token. Artex token will be used for the function of all privileged functions of the platform and for shopping transactions.

### Low Total Supply

Artex has only 100m total supply. First year the circulating supply will be only 50m.

### A Promising Future Project

Artex is, world's first and only blockchain based fine arts exchange platform. It is the future of art market and one and only in its field.

### Low Market Cap

You will be an investor in a project with great potential very early. Artex provide a future of arts.

# Shark Tank Star Kevin O'Leary Reveals 10-Year Gameplan for Investing in Bitcoin Ecosystem

Shark Tank investor Kevin O'Leary is reportedly planning to make big bets on sustainable Bitcoin (BTC) mining over the next 10 years.

O'Leary says that with concerns mounting over Bitcoin's energy footprint, he sees opportunities to be capitalized on.

The TV personality tells Fortune that green Bitcoin mining will be one of his biggest investment opportunities and something he plans to look at with a decade-long time horizon.

O'Leary says that he's anticipating increased adoption of the so-called "Norway model" where transmission lines from hydroelectric or nuclear sources power

Bitcoin mining centers and potentially provide additional electricity for neighboring communities.

The Shark says that he has already invested in hydro-powered Bitcoin mining and has no plans of slowing down.

"I'm gonna spend the next 10 years doing this."

The O'Shares Investments chairman says that regulation and the implementation of a proposal from the Securities and Exchange Commission (SEC) to require public companies to disclose their climate impact could lead to a more sustainable Bitcoin mining.

## Ethereum Miners Continue To Surpass Bitcoin Miners In Revenue

Ethereum Miners Continue To Surpass Bitcoin Miners In Revenue

Ethereum miners continue to outpace bitcoin miners in terms of revenue. The second-largest cryptocurrency by market cap has now proven that it is a better bet when it comes to crypto mining, making it a more profitable venture for miners. At various times in the past, this has been the case and in the month of March, it became even more prominent given the gap recorded between the revenue brought in by ETH miners versus those brought in by Bitcoin miners.

Ethereum Miners Take The Cake  
March has proven to be a great month for Ethereum in terms of mining. Even with the EIP-1559 changing the way miners are rewarded on the

network, it has not slowed down the revenue generated by miners. This number came out to a whopping \$1.34 billion for the month of March. It had grown drastically from the previous month, recording as high as 7% an increase from the second month of 2022, which had total revenue of \$1.25 billion.

On the flip side of this, bitcoin miners only saw a total of \$1.21 in revenue generated from their mining activities. Similar to Ethereum, the number had grown from what was recorded in February of this year. It grew about \$150 million from its February numbers, coming out to a 14% increase. However, it was still not enough to reach what its fiercest competitor brought in.

## Stablecoin Economy Is \$10 Billion Away From Reaching a \$200 Billion Market Cap

The stablecoin economy has grown during the last month as the market capitalization is now only \$10 billion away from reaching the \$200 billion mark. While the largest stablecoin, by market valuation, tether (USDT) swelled by 3% during the last 30 days to \$82 billion, terraUSD (UST) has increased by 15.4% to \$16.7 billion.

Stablecoin Economy Swells by 1.65% in 30 Days Nearing the \$200 Billion Milestone  
According to statistics on Monday, April 11, 2022, the stablecoin economy is worth \$190.1 billion. During the last 24 hours, stablecoins have captured \$68 billion in trade volume out of the aggregate of \$107 billion worth of today's global trade volume. The largest of the

bunch is tether (USDT) and over the last 30 days, USDT increased by 3%. Tether now holds an \$82.6 billion market valuation which represents 4.21% of the entire crypto economy.

The stablecoin economy is now \$190 billion. Chart via coingecko.com on April 11, 2022. The second-largest stablecoin usdcoin (USDC) saw a decline over the last month dropping 2.9%. BUSD also dropped during the last 30 days, losing 1.2% during the timeframe. The fourth-largest stablecoin, in terms of market capitalization, terraUSD (UST) spiked by 15.4%. UST's market capitalization on Monday is \$16.7 billion or 0.85% of the entire crypto economy's current value at \$1.96 trillion.

## Binance gets in principle approval to operate in Abu Dhabi

Abu Dhabi has become the third Middle Eastern jurisdiction to grant Binance regulatory approval after Dubai and Bahrain.

Binance, the largest crypto exchange by trading volume, has received in-principle approval to offer its services in Abu Dhabi through its subsidiary Binance (AD) Limited. The Financial Services Regulatory Authority (FSRA) of the Abu Dhabi Global Market (ADGM) granted the exchange a provisional

go-ahead to operate as a broker-dealer in virtual assets.

ADGM announced this news yesterday, noting that Binance applied for Financial Services Permission (FSP) from FSRA as part of its plans to establish itself as a fully-regulated virtual asset service provider (VASP).

Commenting on Binance's approval, Dhaher bin Dhaher, the CEO of the Registration Authority of ADGM, said,

"We are pleased that Binance has been awarded an In-Principle Approval in the ADGM and are excited to support them as they work towards establishing their foothold and presence in Abu Dhabi, the capital of the UAE." He touted ADGM, saying it is the largest regulated jurisdiction of virtual assets in the

Middle East and North Africa (MENA region). According to him, Binance's participation will help improve the already vibrant and trusted ecosystem of virtual asset trading venues, global exchanges, and service providers.
